

# **Digital Communication over Fading Channels**

**Second Edition**

Marvin K. Simon  
Mohamed-Slim Alouini

A JOHN WILEY & SONS, INC., PUBLICATION

# CONTENTS

<b>Preface</b>	<b>xxv</b>
<b>Nomenclature</b>	<b>xxxi</b>
<b>PART 1 FUNDAMENTALS</b>	
<b>CHAPTER 1 Introduction</b>	<b>3</b>
1.1 System Performance Measures	4
1.1.1 Average Signal-to-Noise Ratio (SNR)	4
1.1.2 Outage Probability	5
1.1.3 Average Bit Error Probability (BEP)	6
1.1.4 Amount of Fading	12
1.1.5 Average Outage Duration	13
1.2 Conclusions	14
References	14
<b>CHAPTER 2 Fading Channel Characterization and Modeling</b>	<b>17</b>
2.1 Main Characteristics of Fading Channels	17
2.1.1 Envelope and Phase Fluctuations	17
2.1.2 Slow and Fast Fading	18
2.1.3 Frequency-Flat and Frequency-Selective Fading	18
2.2 Modeling of Flat-Fading Channels	19
2.2.1 Multipath Fading	20
2.2.1.1 Rayleigh	20
2.2.1.2 Nakagami- $q$ (Hoyt)	22
2.2.1.3 Nakagami- $n$ (Rice)	23
2.2.1.4 Nakagami- $m$	24
	<b>vii</b>

2.2.1.5	Weibull	25
2.2.1.6	Beckmann	28
2.2.1.7	Spherically-Invariant Random Process Model	30
2.2.2	Log-Normal Shadowing	32
2.2.3	Composite Multipath/Shadowing	33
2.2.3.1	Composite Gamma/Log-Normal Distribution	33
2.2.3.2	Suzuki Distribution	34
2.2.3.3	$K$ Distribution	34
2.2.3.4	Rician Shadowed Distributions	36
2.2.4	Combined (Time-Shared) Shadowed/Unshadowed Fading	37
2.3	Modeling of Frequency-Selective Fading Channels	37
	References	39
<b>CHAPTER 3</b>	<b>Types of Communication</b>	<b>45</b>
3.1	Ideal Coherent Detection	45
3.1.1	Multiple Amplitude-Shift-Keying ( $M$ -ASK) or Multiple Amplitude Modulation ( $M$ -AM)	47
3.1.2	Quadrature Amplitude-Shift-Keying (QASK) or Quadrature Amplitude Modulation (QAM)	48
3.1.3	$M$ -ary Phase-Shift-Keying ( $M$ -PSK)	50
3.1.4	Differentially Encoded $M$ -ary Phase-Shift-Keying ( $M$ -PSK)	53
3.1.4.1	$\pi/4$ -QPSK	54
3.1.5	Offset QPSK (OQPSK) or Staggered QPSK (SQPSK)	55
3.1.6	$M$ -ary Frequency-Shift-Keying ( $M$ -FSK)	56
3.1.7	Minimum-Shift-Keying (MSK)	58
3.2	Nonideal Coherent Detection	62
3.3	Noncoherent Detection	66
3.4	Partially Coherent Detection	68
3.4.1	Conventional Detection	68
3.4.1.1	One-Symbol Observation	68
3.4.1.2	Multiple-Symbol Observation	69
3.4.2	Differentially Coherent Detection	71
3.4.2.1	$M$ -ary Differential Phase-Shift-Keying ( $M$ -DPSK)	71
3.4.2.2	Conventional Detection (Two-Symbol Observation)	73
3.4.2.3	Multiple-Symbol Detection	76

3.4.3	$\pi/4$ -Differential QPSK ( $\pi/4$ -DQPSK)	78
	References	78

## PART 2 MATHEMATICAL TOOLS

<b>CHAPTER 4</b>	<b>Alternative Representations of Classical Functions</b>	<b>83</b>
4.1	Gaussian $Q$ -Function	84
4.1.1	One-Dimensional Case	84
4.1.2	Two-Dimensional Case	86
4.1.3	Other Forms for One- and Two-Dimensional Cases	88
4.1.4	Alternative Representations of Higher Powers of the Gaussian $Q$ -Function	90
4.2	Marcum $Q$ -Function	93
4.2.1	First-Order Marcum $Q$ -Function	93
4.2.1.1	Upper and Lower Bounds	97
4.2.2	Generalized ( $m$ th-Order) Marcum $Q$ -Function	100
4.2.2.1	Upper and Lower Bounds	105
4.3	The Nuttall $Q$ -Function	113
4.4	Other Functions	117
	References	119
	Appendix 4A. Derivation of Eq. (4.2)	120
<b>CHAPTER 5</b>	<b>Useful Expressions for Evaluating Average Error Probability Performance</b>	<b>123</b>
5.1	Integrals Involving the Gaussian $Q$ -Function	123
5.1.1	Rayleigh Fading Channel	125
5.1.2	Nakagami- $q$ (Hoyt) Fading Channel	125
5.1.3	Nakagami- $n$ (Rice) Fading Channel	126
5.1.4	Nakagami- $m$ Fading Channel	126
5.1.5	Log-Normal Shadowing Channel	128
5.1.6	Composite Log-Normal Shadowing/Nakagami- $m$ Fading Channel	128
5.2	Integrals Involving the Marcum $Q$ -Function	131
5.2.1	Rayleigh Fading Channel	132
5.2.2	Nakagami- $q$ (Hoyt) Fading Channel	133
5.2.3	Nakagami- $n$ (Rice) Fading Channel	133
5.2.4	Nakagami- $m$ Fading Channel	133
5.2.5	Log-Normal Shadowing Channel	133

5.2.6	Composite Log-Normal Shadowing/Nakagami- $m$ Fading Channel	134
5.2.7	Some Alternative Closed-Form Expressions	135
5.3	Integrals Involving the Incomplete Gamma Function	137
5.3.1	Rayleigh Fading Channel	138
5.3.2	Nakagami- $q$ (Hoyt) Fading Channel	139
5.3.3	Nakagami- $n$ (Rice) Fading Channel	139
5.3.4	Nakagami- $m$ Fading Channel	140
5.3.5	Log-Normal Shadowing Channel	140
5.3.6	Composite Log-Normal Shadowing/Nakagami- $m$ Fading Channel	140
5.4	Integrals Involving Other Functions	141
5.4.1	The $M$ -PSK Error Probability Integral	141
5.4.1.1	Rayleigh Fading Channel	142
5.4.1.2	Nakagami- $m$ Fading Channel	142
5.4.2	Arbitrary Two-Dimensional Signal Constellation Error Probability Integral	142
5.4.3	Higher-Order Integer Powers of the Gaussian $Q$ -Function	144
5.4.3.1	Rayleigh Fading Channel	144
5.4.3.2	Nakagami- $m$ Fading Channel	145
5.4.4	Integer Powers of $M$ -PSK Error Probability Integrals	145
5.4.4.1	Rayleigh Fading Channel	146
	References	148
	Appendix 5A. Evaluation of Definite Integrals Associated with Rayleigh and Nakagami- $m$ Fading	149
5A.1	Exact Closed-Form Results	149
5A.2	Upper and Lower Bounds	165

<b>CHAPTER 6</b>	<b>New Representations of Some Probability Density and Cumulative Distribution Functions for Correlative Fading Applications</b>	<b>169</b>
6.1	Bivariate Rayleigh PDF and CDF	170
6.2	PDF and CDF for Maximum of Two Rayleigh Random Variables	175
6.3	PDF and CDF for Maximum of Two Nakagami- $m$ Random Variables	177
6.4	PDF and CDF for Maximum and Minimum of Two Log-Normal Random Variables	180
6.4.1	The Maximum of Two Log-Normal Random Variables	180

6.4.2	The Minimum of Two Log-Normal Random Variables	183
	References	185

### **PART 3 OPTIMUM RECEPTION AND PERFORMANCE EVALUATION**

<b>CHAPTER 7</b>	<b>Optimum Receivers for Fading Channels</b>	<b>189</b>
7.1	The Case of Known Amplitudes, Phases, and Delays—Coherent Detection	191
7.2	The Case of Known Phases and Delays but Unknown Amplitudes	195
7.2.1	Rayleigh Fading	195
7.2.2	Nakagami- $m$ Fading	196
7.3	The Case of Known Amplitudes and Delays but Unknown Phases	198
7.4	The Case of Known Delays but Unknown Amplitudes and Phases	199
7.4.1	One-Symbol Observation—Noncoherent Detection	199
7.4.1.1	Rayleigh Fading	201
7.4.1.2	Nakagami- $m$ Fading	206
7.4.2	Two-Symbol Observation—Conventional Differentially Coherent Detection	211
7.4.2.1	Rayleigh Fading	214
7.4.2.2	Nakagami- $m$ Fading	217
7.4.3	$N_s$ -Symbol Observation—Multiple Differentially Coherent Detection	217
7.4.3.1	Rayleigh Fading	218
7.4.3.2	Nakagami- $m$ Fading	218
7.5	The Case of Unknown Amplitudes, Phases, and Delays	219
7.5.1	One-Symbol Observation—Noncoherent Detection	219
7.5.1.1	Rayleigh Fading	220
7.5.1.2	Nakagami- $m$ Fading	221
7.5.2	Two-Symbol Observation—Conventional Differentially Coherent Detection	221
	References	222
<b>CHAPTER 8</b>	<b>Performance of Single-Channel Receivers</b>	<b>223</b>
8.1	Performance Over the AWGN Channel	223

8.1.1	Ideal Coherent Detection	224
8.1.1.1	Multiple Amplitude-Shift-Keying ( $M$ -ASK) or Multiple Amplitude Modulation ( $M$ -AM)	224
8.1.1.2	Quadrature Amplitude-Shift-Keying (QASK) or Quadrature Amplitude Modulation (QAM)	225
8.1.1.3	$M$ -ary Phase-Shift-Keying ( $M$ -PSK)	228
8.1.1.4	Differentially Encoded $M$ -ary Phase-Shift-Keying ( $M$ -PSK) and $\pi/4$ -QPSK	234
8.1.1.5	Offset QPSK (OQPSK) or Staggered QPSK (SQPSK)	235
8.1.1.6	$M$ -ary Frequency-Shift-Keying ( $M$ -FSK)	236
8.1.1.7	Minimum-Shift-Keying (MSK)	237
8.1.2	Nonideal Coherent Detection	237
8.1.3	Noncoherent Detection	242
8.1.4	Partially Coherent Detection	242
8.1.4.1	Conventional Detection (One-Symbol Observation)	242
8.1.4.2	Multiple-Symbol Detection	244
8.1.5	Differentially Coherent Detection	245
8.1.5.1	$M$ -ary Differential Phase-Shift-Keying ( $M$ -DPSK)	245
8.1.5.2	$M$ -DPSK with Multiple-Symbol Detection	249
8.1.5.3	$\pi/4$ -Differential QPSK ( $\pi/4$ -DQPSK)	250
8.1.6	Generic Results for Binary Signaling	251
8.2	Performance Over Fading Channels	252
8.2.1	Ideal Coherent Detection	252
8.2.1.1	Multiple Amplitude-Shift-Keying ( $M$ -ASK) or Multiple Amplitude Modulation ( $M$ -AM)	253
8.2.1.2	Quadrature Amplitude-Shift-Keying (QASK) or Quadrature Amplitude Modulation (QAM)	254
8.2.1.3	$M$ -ary Phase-Shift-Keying ( $M$ -PSK)	256
8.2.1.4	Differentially Encoded $M$ -ary Phase-Shift-Keying ( $M$ -PSK) and $\pi/4$ -QPSK	258

8.2.1.5	Offset QPSK (OQPSK) or Staggered QPSK (SQPSK)	262
8.2.1.6	$M$ -ary Frequency-Shift-Keying ( $M$ -FSK)	262
8.2.1.7	Minimum-Shift-Keying (MSK)	267
8.2.2	Nonideal Coherent Detection	267
8.2.2.1	Simplified Noisy Reference Loss Evaluation	273
8.2.3	Noncoherent Detection	281
8.2.4	Partially Coherent Detection	282
8.2.5	Differentially Coherent Detection	284
8.2.5.1	$M$ -ary Differential Phase-Shift-Keying ( $M$ -DPSK)—Slow Fading	285
8.2.5.2	$M$ -ary Differential Phase-Shift-Keying ( $M$ -DPSK)—Fast Fading	290
8.2.5.3	$\pi/4$ -Differential QPSK ( $\pi/4$ -DQPSK)	294
8.2.6	Performance in the Presence of Imperfect Channel Estimation	294
8.2.6.1	Signal Model and Symbol Error Probability Evaluation for Rayleigh Fading	295
8.2.6.2	Special Cases	297
	References	301
	Appendix 8A. Stein's Unified Analysis of the Error Probability Performance of Certain Communication Systems	304
<b>CHAPTER 9</b>	<b>Performance of Multichannel Receivers</b>	<b>311</b>
9.1	Diversity Combining	312
9.1.1	Diversity Concept	312
9.1.2	Mathematical Modeling	312
9.1.3	Brief Survey of Diversity Combining Techniques	313
9.1.3.1	Pure Combining Techniques	313
9.1.3.2	Hybrid Combining Techniques	315
9.1.4	Complexity–Performance Tradeoffs	316
9.2	Maximal-Ratio Combining (MRC)	316
9.2.1	Receiver Structure	317
9.2.2	PDF-Based Approach	319
9.2.3	MGF-Based Approach	320
9.2.3.1	Average Bit Error Rate of Binary Signals	320

9.2.3.2	Average Symbol Error Rate of $M$ -PSK Signals	322
9.2.3.3	Average Symbol Error Rate of $M$ -AM Signals	323
9.2.3.4	Average Symbol Error Rate of Square $M$ -QAM Signals	324
9.2.4	Bounds and Asymptotic SER Expressions	326
9.3	Coherent Equal Gain Combining	331
9.3.1	Receiver Structure	331
9.3.2	Average Output SNR	332
9.3.3	Exact Error Rate Analysis	333
9.3.3.1	Binary Signals	333
9.3.3.2	Extension to $M$ -PSK Signals	339
9.3.4	Approximate Error Rate Analysis	340
9.3.5	Asymptotic Error Rate Analysis	342
9.4	Noncoherent and Differentially Coherent Equal Gain Combining	342
9.4.1	DPSK, DQPSK, and BFSK Performance (Exact and with Bounds)	343
9.4.1.1	Receiver Structures	343
9.4.1.2	Exact Analysis of Average Bit Error Probability	346
9.4.1.3	Bounds on Average Bit Error Probability	352
9.4.2	$M$ -ary Orthogonal FSK	353
9.4.2.1	Exact Analysis of Average Bit Error Probability	356
9.4.2.2	Numerical Examples	364
9.4.3	Multiple-Symbol Differential Detection with Diversity Combining	367
9.4.3.1	Decision Metrics	367
9.4.3.2	Average Bit Error Rate Performance	368
9.4.3.3	Asymptotic (Large $N_s$ ) Behavior	371
9.4.3.4	Numerical Results	372
9.5	Optimum Diversity Combining of Noncoherent FSK	375
9.5.1	Comparison with the Noncoherent Equal Gain Combining Receiver	377
9.5.2	Extension to the $M$ -ary Orthogonal FSK Case	378
9.6	Outage Probability Performance	379
9.6.1	MRC and Noncoherent EGC	379
9.6.2	Coherent EGC	380

9.6.3	Numerical Examples	381
9.7	Impact of Fading Correlation	389
9.7.1	Model A: Two Correlated Branches with Nonidentical Fading	390
9.7.1.1	PDF	390
9.7.1.2	MGF	392
9.7.2	Model B: $D$ Identically Distributed Branches with Constant Correlation	392
9.7.2.1	PDF	393
9.7.2.2	MGF	393
9.7.3	Model C: $D$ Identically Distributed Branches with Exponential Correlation	394
9.7.3.1	PDF	394
9.7.3.2	MGF	394
9.7.4	Model D: $D$ Nonidentically Distributed Branches with Arbitrary Correlation	395
9.7.4.1	MGF	395
9.7.4.2	Special Cases of Interest	396
9.7.4.3	Proof that Correlation Degrades Performance	397
9.7.5	Numerical Examples	399
9.8	Selection Combining	404
9.8.1	MGF of Output SNR	405
9.8.2	Average Output SNR	406
9.8.3	Outage Probability	409
9.8.3.1	Analysis	409
9.8.3.2	Numerical Example	410
9.8.4	Average Probability of Error	411
9.8.4.1	BDPSK and Noncoherent BFSK	411
9.8.4.2	Coherent BPSK and BFSK	413
9.8.4.3	Numerical Example	415
9.9	Switched Diversity	417
9.9.1	Dual-Branch Switch-and-Stay Combining	419
9.9.1.1	Performance of SSC over Independent Identically Distributed Branches	419
9.9.1.2	Effect of Branch Unbalance	433
9.9.1.3	Effect of Branch Correlation	436
9.9.2	Multibranch Switch-and-Examine Combining	439
9.9.2.1	Classical Multibranch SEC	440
9.9.2.2	Multibranch SEC with Post-selection	443
9.9.2.3	Scan-and-Wait Combining	446

9.10	Performance in the Presence of Outdated or Imperfect Channel Estimates	456
9.10.1	Maximal-Ratio Combining	457
9.10.2	Noncoherent EGC over Rician Fast Fading	458
9.10.3	Selection Combining	461
9.10.4	Switched Diversity	462
	9.10.4.1 SSC Output Statistics	462
	9.10.4.2 Average SNR	463
	9.10.4.3 Average Probability of Error	463
9.10.5	Numerical Results	464
9.11	Combining in Diversity-Rich Environments	466
9.11.1	Two-Dimensional Diversity Schemes	466
	9.11.1.1 Performance Analysis	468
	9.11.1.2 Numerical Examples	469
9.11.2	Generalized Selection Combining	469
	9.11.2.1 I.I.D. Rayleigh Case	472
	9.11.2.2 Non-I.I.D. Rayleigh Case	492
	9.11.2.3 I.I.D. Nakagami- $m$ Case	497
	9.11.2.4 Partial-MGF Approach	502
	9.11.2.5 I.I.D. Weibull Case	510
9.11.3	Generalized Selection Combining with Threshold Test per Branch (T-GSC)	512
	9.11.3.1 Average Error Probability Performance	515
	9.11.3.2 Outage Probability Performance	520
	9.11.3.3 Performance Comparisons	524
9.11.4	Generalized Switched Diversity (GSSC)	531
	9.11.4.1 GSSC Output Statistics	531
	9.11.4.2 Average Probability of Error	532
9.11.5	Generalized Selection Combining Based on the Log-Likelihood Ratio	532
	9.11.5.1 Optimum (LLR-Based) GSC for Equiprobable BPSK	533
	9.11.5.2 Envelope-Based GSC	536
	9.11.5.3 Optimum GSC for Noncoherently Detected Equiprobable Orthogonal BFSK	536
9.12	Post-detection Combining	537
9.12.1	System and Channel Models	537
	9.12.1.1 Overall System Description	537
	9.12.1.2 Channel Model	537
	9.12.1.3 Receiver	539
9.12.2	Post-detection Switched Combining Operation	539
	9.12.2.1 Switching Strategy and Mechanism	539

9.12.2.2	Switching Threshold	540
9.12.3	Average BER Analysis	540
9.12.3.1	Identically Distributed Branches	542
9.12.3.2	Nonidentically Distributed Branches	542
9.12.4	Rayleigh Fading	543
9.12.4.1	Identically Distributed Branches	544
9.12.4.2	Nonidentically Distributed Branches	547
9.12.5	Impact of the Severity of Fading	548
9.12.5.1	Average BER	550
9.12.5.2	Numerical Examples and Discussion	552
9.12.6	Extension to Orthogonal $M$ -FSK	552
9.12.6.1	System Model and Switching Operation	552
9.12.6.2	Average Probability of Error	555
9.12.6.3	Numerical Examples	562
9.13	Performance of Dual-Branch Diversity Combining Schemes over Log-Normal Channels	566
9.13.1	System and Channel Models	566
9.13.2	Maximal-Ratio Combining	568
9.13.2.1	Moments of the Output SNR	568
9.13.2.2	Outage Probability	570
9.13.2.3	Extension to Equal Gain Combining	571
9.13.3	Selection Combining	571
9.13.3.1	Moments of the Output SNR	572
9.13.3.2	Outage Probability	575
9.13.4	Switched Combining	575
9.13.4.1	Moments of the Output SNR	576
9.13.4.2	Outage Probability	581
9.14	Average Outage Duration	584
9.14.1	System and Channel Models	585
9.14.1.1	Fading Channel Models	585
9.14.1.2	GSC Mode of Operation	585
9.14.2	Average Outage Duration and Average Level Crossing Rate	586
9.14.2.1	Problem Formulation	586
9.14.2.2	General Formula for the Average LCR of GSC	586
9.14.3	I.I.D. Rayleigh Fading	589
9.14.3.1	Generic Expressions for GSC	589
9.14.3.2	Special Cases: SC and MRC	590
9.14.4	Numerical Examples	591

9.15 Multiple-Input/Multiple-Output (MIMO) Antenna Diversity Systems	594
9.15.1 System, Channel, and Signal Models	594
9.15.2 Optimum Weight Vectors and Output SNR	595
9.15.3 Distributions of the Largest Eigenvalue of Noncentral Complex Wishart Matrices	596
9.15.3.1 CDF of $\mathbf{S}$	596
9.15.3.2 PDF of $\mathbf{S}$	598
9.15.3.3 PDF of Output SNR and Outage Probability	599
9.15.3.4 Special Cases	600
9.15.3.5 Numerical Results and Discussion	601
References	604

**PART 4 MULTIUSER COMMUNICATION SYSTEMS**

<b>CHAPTER 10 Outage Performance of Multiuser Communication Systems</b>	<b>639</b>
10.1 Outage Probability in Interference-Limited Systems	640
10.1.1 A Probability Related to the CDF of the Difference of Two Chi-Square Variates with Different Degrees of Freedom	640

10.1.2	Fading and System Models	643
10.1.2.1	Channel Fading Models	643
10.1.2.2	Desired and Interference Signals Model	644
10.1.3	A Generic Formula for the Outage Probability	644
10.1.3.1	Nakagami/Nakagami Scenario	645
10.1.3.2	Rice/Rice Scenario	646
10.1.3.3	Rice/Nakagami Scenario	647
10.1.3.4	Nakagami/Rice Scenario	647
10.2	Outage Probability with a Minimum Desired Signal Power Constraint	648
10.2.1	Models and Problem Formulation	648
10.2.1.1	Fading and System Models	648
10.2.1.2	Outage Probability Definition	648
10.2.2	Rice/I.I.D. Nakagami Scenario	649
10.2.2.1	Rice/I.I.D. Rayleigh Scenario	649
10.2.2.2	Extension to Rice/I.I.D. Nakagami Scenario	652
10.2.2.3	Numerical Examples	652
10.2.3	Nakagami/I.I.D. Rice Scenario	654
10.2.3.1	Rayleigh/I.I.D. Rice Scenario	654
10.2.3.2	Extension to Nakagami/I.I.D. Rice Scenario	656
10.2.3.3	Numerical Examples	657
10.3	Outage Probability with Dual-Branch SC and SSC Diversity	659
10.3.1	Fading and System Models	661
10.3.2	Outage Performance with Minimum Signal Power Constraint	661
10.3.2.1	Selection Combining	662
10.3.2.2	Switch-and-Stay Combining	663
10.3.2.3	Numerical Examples	664
10.4	Outage Rate and Average Outage Duration of Multiuser Communication Systems	667
	References	671
	Appendix 10A. A Probability Related to the CDF of the Difference of Two Chi-Square Variates with Different Degrees of Freedom	674
	Appendix 10B. Outage Probability in the Nakagami/Nakagami Interference-Limited Scenario	678

<b>CHAPTER 11 Optimum Combining – a Diversity Technique for Communication over Fading Channels in the Presence of Interference</b>	<b>681</b>
11.1 Performance of Diversity Combining Receivers	682
11.1.1 Single Interferer; Independent, Identically Distributed Fading	682
11.1.1.1 Rayleigh Fading—Exact Evaluation of Average Bit Error Probability	686
11.1.1.2 Rayleigh Fading—Approximate Evaluation of Average Bit Error Probability	689
11.1.1.3 Extension to Other Modulations	692
11.1.1.4 Rician Fading—Evaluation of Average Bit Error Probability	693
11.1.1.5 Nakagami- $m$ Fading—Evaluation of Average Bit Error Probability	695
11.1.2 Multiple Equal Power Interferers; Independent, Identically Distributed Fading	697
11.1.2.1 Number of Interferers Less than Number of Array Elements	700
11.1.2.2 Number of Interferers Equal to or Greater than Number of Array Elements	706
11.1.3 Comparison with Results for MRC in the Presence of Interference	710
11.1.4 Multiple Arbitrary Power Interferers; Independent, Identically Distributed Fading	715
11.1.4.1 Average SEP of $M$ -PSK	715
11.1.4.2 Numerical Results	716
11.1.5 Multiple-Symbol Differential Detection in the Presence of Interference	718
11.1.5.1 Decision Metric	718
11.1.5.2 Average BEP	718
11.2 Optimum Combining with Multiple Transmit and Receive Antennas	721
11.2.1 System, Channel, and Signals Models	721
11.2.2 Optimum Weight Vectors and Output SIR	723
11.2.3 PDF of Output SIR and Outage Probability	723
11.2.3.1 PDF of Output SIR	724
11.2.3.2 Outage Probability	724
11.2.3.3 Special Case When $L_t = 1$	725
11.2.4 Key Observations	726
11.2.4.1 Distribution of Antenna Elements	726

11.2.4.2	Effects of Correlation between Receiver Antenna Pairs	726
11.2.5	Numerical Examples	727
	References	729
	Appendix 11A. Distributions of the Largest Eigenvalue of Certain Quadratic Forms in Complex Gaussian Vectors	732
11A.1	General Result	732
11A.2	Special Case	733
<b>CHAPTER 12</b>	<b>Direct-Sequence Code-Division Multiple Access (DS-CDMA)</b>	<b>735</b>
12.1	Single-Carrier DS-CDMA Systems	736
12.1.1	System and Channel Models	736
12.1.1.1	Transmitted Signal	736
12.1.1.2	Channel Model	737
12.1.1.3	Receiver	738
12.1.2	Performance Analysis	739
12.1.2.1	General Case	740
12.1.2.2	Application to Nakagami- $m$ Fading Channels	740
12.2	Multicarrier DS-CDMA Systems	741
12.2.1	System and Channel Models	742
12.2.1.1	Transmitter	742
12.2.1.2	Channel	743
12.2.1.3	Receiver	743
12.2.1.4	Notations	744
12.2.2	Performance Analysis	745
12.2.2.1	Conditional SNR	745
12.2.2.2	Average BER	749
12.2.3	Numerical Examples	750
	References	754
<b>PART 5</b>	<b>CODED COMMUNICATION SYSTEMS</b>	
<b>CHAPTER 13</b>	<b>Coded Communication over Fading Channels</b>	<b>759</b>
13.1	Coherent Detection	761
13.1.1	System Model	761
13.1.2	Evaluation of Pairwise Error Probability	763
13.1.2.1	Known Channel State Information	764
13.1.2.2	Unknown Channel State Information	768

13.1.3	Transfer Function Bound on Average Bit Error Probability	772
13.1.3.1	Known Channel State Information	774
13.1.3.2	Unknown Channel State Information	774
13.1.4	An Alternative Formulation of the Transfer Function Bound	774
13.1.5	An Example	775
13.2	Differentially Coherent Detection	781
13.2.1	System Model	781
13.2.2	Performance Evaluation	783
13.2.2.1	Unknown Channel State Information	783
13.2.2.2	Known Channel State Information	785
13.2.3	An Example	785
13.3	Numerical Results—Comparison between the True Upper Bounds and Union–Chernoff Bounds	787
	References	792
	Appendix 13A. Evaluation of a Moment Generating Function Associated with Differential Detection of <i>M</i> -PSK Sequences	793

**CHAPTER 14 Multichannel Transmission – Transmit Diversity and Space-Time Coding 797**

14.1	A Historical Perspective	799
14.2	Transmit versus Receive Diversity—Basic Concepts	800
14.3	Alamouti’s Diversity Technique—a Simple Transmit Diversity Scheme Using Two Transmit Antennas	803
14.4	Generalization of Alamouti’s Diversity Technique to Orthogonal Space-Time Block Code Designs	809
14.5	Alamouti’s Diversity Technique Combined with Multidimensional Trellis-Coded Modulation	812
14.5.1	Evaluation of Pairwise Error Probability Performance on Fast Rician Fading Channels	814
14.5.2	Evaluation of Pairwise Error Probability Performance on Slow Rician Fading Channels	817
14.6	Space-Time Trellis-Coded Modulation	818

14.6.1	Evaluation of Pairwise Error Probability Performance on Fast Rician Fading Channels	820
14.6.2	Evaluation of Pairwise Error Probability Performance on Slow Rician Fading Channels	821
14.6.3	An Example	824
14.6.4	Approximate Evaluation of Average Bit Error Probability	827
14.6.4.1	Fast-Fading Channel Model	827
14.6.4.2	Slow-Fading Channel Model	829
14.6.5	Evaluation of the Transfer Function Upper Bound on Average Bit Error Probability	831
14.6.5.1	Fast-Fading Channel Model	831
14.6.5.2	Slow-Fading Channel Model	833
14.7	Other Combinations of Space-Time Block Codes and Space-Time Trellis Codes	833
14.7.1	Super-Orthogonal Space-Time Trellis Codes	834
14.7.1.1	The Parameterized Class of Space-Time Block Codes and System Model	834
14.7.1.2	Evaluation of the Pairwise Error Probability	836
14.7.1.3	Extension of the Results to Super-Orthogonal Codes with More than Two Transmit Antennas	844
14.7.1.4	Approximate Evaluation of Average Bit Error Probability	845
14.7.1.5	Evaluation of the Transfer Function Upper Bound on the Average Bit Error Probability	846
14.7.1.6	Numerical Results	848
14.7.2	Super-Quasi-Orthogonal Space-Time Trellis Codes	850
14.7.2.1	Signal Model	850
14.7.2.2	Evaluation of Pairwise Error Probability	852
14.7.2.3	Examples	853
14.7.2.4	Numerical Results	857
14.8	Disclaimer	858
	References	859

**CHAPTER 15 Capacity of Fading Channels 863**

15.1	Channel and System Model	863
------	--------------------------	-----

15.2 Optimum Simultaneous Power and Rate Adaptation	865
15.2.1 No Diversity	865
15.2.2 Maximal-Ratio Combining	866
15.3 Optimum Rate Adaptation with Constant Transmit Power	867
15.3.1 No Diversity	868
15.3.2 Maximal-Ratio Combining	869
15.4 Channel Inversion with Fixed Rate	869
15.4.1 No Diversity	870
15.4.2 Maximal-Ratio Combining	870
15.5 Numerical Examples	871
15.6 Capacity of MIMO Fading Channels	876
References	877
Appendix 15A. Evaluation of $\mathcal{J}_n(\mu)$	878
Appendix 15B. Evaluation of $\mathcal{I}_n(\mu)$	880
