
Falco Jaekel

Cloud Logistics

Reference Architecture Design

With a foreword by Prof. Dr. Dr. h.c. Werner Delfmann

 Springer Gabler

Overview

List of Figures	xxi
List of Tables	xxiii
List of Abbreviations	xxvii
A. Introduction	1
I. Problem Statement	1
II. Objective	5
III. Course of Investigation	5
IV. Guidance to the Reader	7
B. Fundamentals of Logistics Systems	9
I. Abstract of Part	9
II. An Introduction to Analyzing and Designing Logistics Systems	14
III. Infrastructural and Functional Perspectives on Logistics Systems	21
IV. Institutional Perspective on Meso-Logistics Systems	35
V. Environment of Meso-Logistics Systems	43
VI. Summary	50
C. Fundamentals of Interfirm Networks and Networked Horizontal LSP Cooperation	53
I. Abstract of Part	53
II. Introduction	66
III. Transaction Cost Economics and Market Mechanisms	70
IV. Resource-based View	100
V. Organization of Interfirm Networks	109
VI. Networked Horizontal LSP Cooperation	127
VII. Summary	144

D. Fundamentals and Roots of Cloud Computing	145
I. Abstract of Part	145
II. The NIST Definition	151
III. Technological and Conceptual Roots	161
IV. Summary	188
E. Systematic Review of Cloud Logistics Knowledge	191
I. Abstract of Part	191
II. Objective and Method	197
III. Descriptive Analysis and Results: An Emerging Field	201
IV. Content Analysis and Results: Four Distinct but Related Meanings	204
F. Cloud Logistics Systems: Reference Architecture Design	257
I. Design Objective, Method, and Basis	257
II. Stakeholders and Their Concerns	288
III. Selection, Overview, and Outline of Viewpoints	310
IV. Value Creation Logic	313
V. Physical Logistics Infrastructure	324
VI. Structural Governance	365
VII. Centralization	375
VIII. Formalization	388
IX. Characteristic Mix of Coordination Mechanisms – Part I: Integrated Model	401
X. Characteristic Mix of Coordination Mechanisms – Part II: Servitization	449
XI. Characteristic Mix of Coordination Mechanisms – Part III: Standardized, Semantic Service Descriptions	464
XII. Characteristic Mix of Coordination Mechanisms – Part IV: Market Mechanisms	477
XIII. Summary of Propositions	493
G. Conclusions and Outlook	497
Bibliography	501

Contents

List of Figures	xxi
List of Tables	xxiii
List of Abbreviations	xxvii
A. Introduction	1
I. Problem Statement	1
II. Objective	5
III. Course of Investigation	5
IV. Guidance to the Reader	7
B. Fundamentals of Logistics Systems	9
I. Abstract of Part	9
II. An Introduction to Analyzing and Designing Logistics Systems	14
1. Logistics: Term Origin and Usage	14
2. A Formal Definition of Logistics Systems	16
3. Analyzing and Designing Logistics Systems	17
3.1. Preliminary Considerations	17
3.2. Levels of Aggregation: Micro, Meso, Macro	18
3.3. Perspectives: Infrastructural, Functional, Informational, Organizational, and Institutional	19
4. Specifying the Analysis and Design Focus of this Thesis	21
III. Infrastructural and Functional Perspectives on Logistics Systems	21
1. Processes in Logistics Systems and Associated Transformations	22
2. Processes, Resource Design Parameters, and Influencing Factors	22
2.1. Storage	22
2.2. Handling	24
2.3. Transportation	26
2.4. Packaging, Load Unitization, and Labeling	28
2.5. Order Processing	30
2.6. Non-Logistical Production Processes	31
2.7. Interim Summary	32

3. The “Service Character” of Logistics Processes	32
IV. Institutional Perspective on Meso-Logistics Systems	35
1. Types of Actors and Relationships	35
2. Dimensions for Categorizing LSPs	37
3. Modular Service Design and Delivery by LSPs	40
V. Environment of Meso-Logistics Systems	43
1. Conceptualization of Environment	43
2. Competitive Environment	45
3. Technological Environment	48
VI. Summary	50
C. Fundamentals of Interfirm Networks and Networked Horizontal LSP Cooperation	53
I. Abstract of Part	53
II. Introduction	66
1. Definition and Types	66
2. Motives and Antecedents for the Formation of Interfirm Networks	68
3. Selecting Theoretical Approaches to Study Interfirm Networks	68
III. Transaction Cost Economics and Market Mechanisms	70
1. The Problem of Economic Organization and the Formation of Alliances	71
2. Types and Determinants of Transaction Costs	71
2.1. Types of Transaction Costs	71
2.2. Characterizing Economic Actors: Bounded Rationality and Opportunism	72
2.3. Characterizing Transactions: Asset Specificity, Uncertainty, Frequency, and Complexity of Product Descriptions	72
3. Governance Structures and Structural Choice	74
3.1. Governance Structures: Markets, Hybrids, and Hierarchies	74
3.2. Structural Choice: Matching Transaction Characteristics to Governance Structures	78
4. The Role of Information Technology in Economic Organization	80
4.1. Impact on Governance Structures: Electronic Markets and Electronic Hierarchies	81
4.2. Impact on Structural Choice	82
5. Market Mechanisms – Game Theory and Mechanism Design	84
5.1. Preliminary Considerations	84
5.2. A Brief Introduction to Game Theory	84
5.3. Fundamentals of Mechanism Design	88
5.4. Properties of Social Choice Functions	93
5.5. Possibility and Impossibility Results	95
6. Interim Summary	99
IV. Resource-based View	100
1. Preliminary Considerations: Introduction and Evolution	100

2. Competitive Advantage of “Sole” Firms	101
2.1. Assumptions	101
2.2. Argumentative Logic	102
3. Competitive Advantage of “Interconnected” Firms	103
3.1. Motives and Antecedents for Alliance Formation	103
3.2. Assumptions	106
3.3. Rents of Interconnected Firms	108
4. Interim Summary	109
V. Organization of Interfirm Networks	109
1. Conceptualizing the Organizational Structure of Interfirm Networks	110
2. Centralization	111
3. Formalization	114
4. Coordination Mechanisms	116
4.1. Taxonomy of Coordination Mechanisms and the Role of IT Systems	116
4.2. Mutual Adjustment and Implicit Coordination (by Database)	120
4.3. Direct Supervision and System-supported Supervision	121
4.4. Standardization of Work Processes, Programmed Routines, and Hy- perautomation	123
4.5. Standardization of Skills and System-supported Skills	124
4.6. Standardization of Outputs and Service-orientation	126
5. Interim Summary	127
VI. Networked Horizontal LSP Cooperation	127
1. Definitions, Classifications, and Types	128
2. Motives and Antecedents	129
3. Governance	131
3.1. Characterizing LSP Behavior	131
3.2. Characterizing Governance Structures	132
3.3. Electronic Logistics Markets	133
4. Organization	136
4.1. Centralization	136
4.2. Mechanisms and the Role of IT Systems	138
4.3. Formalization	142
5. Interim Summary	143
VII. Summary	144
D. Fundamentals and Roots of Cloud Computing	145
I. Abstract of Part	145
II. The NIST Definition	151
1. Origins and Formal Definition	151
2. Essential Characteristics	152
2.1. On-demand Self-service	152
2.2. Broad Network Access	153
2.3. Resource Pooling	154
2.4. Rapid Elasticity	155

2.5. Measured Service	157
3. Service Models: SaaS, PaaS, and IaaS	157
4. Deployment Models: Private, Community, Public, and Hybrid	158
4.1. Overview	158
4.2. Hybrid Clouds	158
III. Technological and Conceptual Roots	161
1. Overview	161
2. Hardware Virtualization	162
3. Service-oriented Computing	164
3.1. Definition: Services and Service Compositions	164
3.2. Service-Oriented Design Principles	165
3.3. Service-oriented Architectures	170
3.4. Interim Summary	172
4. (Semantic) Web and Logistics Services	173
4.1. The Life Cycle of Web Services	173
4.2. The Semantic Web	176
4.3. Semantic and Syntactic Web Service Descriptions	180
4.4. Semantic Description of Logistics Services	186
IV. Summary	188
E. Systematic Review of Cloud Logistics Knowledge	191
I. Abstract of Part	191
II. Objective and Method	197
III. Descriptive Analysis and Results: An Emerging Field	201
IV. Content Analysis and Results: Four Distinct but Related Meanings	204
1. Overview of Meanings and Relevance for Research Objectives	204
2. Meaning 1: A Logistics Perspective on Cloud Computing Systems	205
3. Meaning 2: Using a Cloud Computing Technology-based Platform for Logistics IT Systems	208
3.1. Cloud-based Platform as Enabler and Nexus for Networked Interfirm Cooperation	208
3.2. Generic Use Case 1: The Outsourcing of Logistics IT Systems to a Third Party Operated Cloud	210
3.3. Generic Use Case 2: Collection, Integration, Sharing, and Synchroni- zation of Logistics-Relevant Information via a Cloud-based Plat- form	211
3.4. Generic Use Case 3: Management and Optimization of Collaborative Value Creation Processes	214
3.5. Generic Use Case 4: Virtual Marketplace	219
3.6. Benefits and Concerns of Using Cloud-based Platforms in Logistics Systems: Essential Cloud Characteristics	221
3.7. Interim Conclusion and Research Opportunities	224

4. Meaning 3: E-commerce Fulfillment through a Network of Cooperating Local Dealers and LSPs	226
5. Meaning 4: Logistics-as-a-Service – Interpreting and Designing Logistics Systems through the Lens of the Cloud Paradigm	228
5.1. Derivation and Definitions	228
5.2. Underlying Design Principles and Concepts: Virtualization, Service-orientation, and Internet of Things	234
5.3. Essential Characteristics of Cloud Logistics Services	236
5.4. Deployment Models: Predominantly Networked Horizontal LSP Cooperation (Hybrid Deployment Model)	240
5.5. Service Models: Logistics-as-a-Service (LaaS) as Hypernym	247
5.6. Examples of Cloud Logistics Architectures	248
5.7. Interim Conclusion and Research Opportunities	250
6. Conclusions: Assessing Commonalities and Appropriateness of Term Usage	254
F. Cloud Logistics Systems: Reference Architecture Design	257
I. Design Objective, Method, and Basis	257
1. Abstract of Chapter	257
2. Fundamental Concepts	261
2.1. Systems and System Architectures	261
2.2. Reference Architectures	262
2.3. Architecture Descriptions	264
2.4. Stakeholders and Stakeholder Concerns	264
2.5. Interim Summary: Linking Fundamental Concepts	265
3. Objective: A Reference Architecture Expressed as Architecture Description	266
4. Method: Contingency and Strategic Choice Theory	267
4.1. Toward an Approach for Architecture Design	267
4.2. A General Model for Software Architecture Design	267
4.3. The Structuring and Effectiveness of Organizations: Contingency and Strategic Choice Theory	269
4.4. Similarities between Designing Software Architectures and the Structuring of Organizations	275
4.5. Making Architectural Design Decisions in Cloud Logistics Reference Architecture	276
5. Basis: The International Standard for Systems and Software Engineering — Architecture Description (ISO/IEC/IEEE 42010:2011)	279
5.1. Purpose, Evolution, and Application Scope	279
5.2. Ontological Model of Architecture Descriptions	282
5.3. Interim Conclusion: The International Standard as a Basis for Reference Architecture Design of Cloud Logistics Systems	287
6. The Process of Creating Architecture Descriptions	288
II. Stakeholders and Their Concerns	288
1. Abstract of Chapter	289

2. Abstract vs. Concrete Stakeholders and Concerns	291
3. Stakeholders	291
3.1. Identification of Stakeholders	291
3.2. Logistics Service Providers	292
3.3. Logistics Consumers	293
3.4. Logistics IT Platform and Application Provider	293
4. Stakeholder Concerns and Essential Cloud Characteristics	295
4.1. Identification and Model of Stakeholder Concerns	295
4.2. Logistical Concerns	297
4.3. Economic Concerns	299
4.4. Governance and Organizational Concerns	300
4.5. Essential Cloud Characteristics – Description and Relation to Concerns	300
5. Interim Summary	309
III. Selection, Overview, and Outline of Viewpoints	310
1. Abstract of Chapter	310
2. Selection and Overview of Viewpoints	310
3. Outline of Viewpoints	311
IV. Value Creation Logic	313
1. Abstract of Chapter	313
2. Viewpoint: Abstracting and Synthesizing Existing Cloud Logistics Sources	314
3. View: Formal Definition, Constituent Features, and Architectural Model	315
3.1. Proposition	315
3.2. Feature 1: Triad of Stakeholder Classes	318
3.3. Feature 2: Cloud Computing Technology based Platform	319
3.4. Feature 3: Essential Cloud Characteristics	320
3.5. Feature 4: Computer-Formalized Mechanisms	322
3.6. Environment: Limited Logistical Predictability and Hostility	323
3.7. Conclusions: The Outcome of Designing Logistics Systems in Accordance with the Principles and Concepts of Cloud Computing	324
V. Physical Logistics Infrastructure	324
1. Abstract of Chapter	325
2. Viewpoint: An Approach to Designing Physical Logistics Resources and Capabilities	329
2.1. Asset Specificity as Underlying Construct to Enable On-demand, Rapid Elasticity, Resource Pooling, and Pay-per-use	329
3. View: Five Logistical Prototype Scenarios	336
3.1. Assessing Asset Specificity and Deriving Logistical Prototype Scenarios	336
3.2. Propositions: Asset Specificity of Logistics Resources and Capabilities	336
3.3. Proposition: Five Logistical Prototype Scenarios	347

3.4. Potential Sources of Competitive Advantage for Logistics Consumers	357
3.5. Conclusions: A Limited Capability and Geographic Scope due to Cloud Characteristics	364
VI. Structural Governance	365
1. Abstract of Chapter	365
2. Viewpoint: An Approach to Determining the Governance Structure	366
2.1. An Integrative Approach: Transaction Cost Economics (TCE) and Resource-based view (RBV)	366
2.2. Contingency Factors from TCE and RBV	367
3. View: Networked Horizontal LSP Cooperation with Market Coordination	369
3.1. Proposition	369
3.2. Assessment of Contingency Factors	370
3.3. Conclusions: Synthesizing Results from TCE and RBV	375
VII. Centralization	375
1. Abstract of Chapter	375
2. Viewpoint: An Approach to Identifying the System Architect	377
2.1. Potential Governance Modes for Cloud Logistics Systems	377
2.2. Contingency Factors	379
3. View: Lead LITPAP Governance	383
3.1. Proposition	383
3.2. Assessment of Contingency Factors	383
3.3. Conclusions: A Change of Power in the Logistics Industry?!	387
VIII. Formalization	388
1. Abstract of Chapter	388
2. Viewpoint: An Approach to Determining the Structural Formalization	390
2.1. An Integrative Approach: Contingency Factors and Choice	390
2.2. Contingency Factors	392
3. View: Written “Framework” Cooperation Contract and Computer-Formalized Mechanisms	394
3.1. Proposition	394
3.2. Assessment of Contingency Factors	395
3.3. Assessment of Tradeoffs between Functions and Dysfunctions	397
3.4. Conclusions: The Need for Social Interaction vs. Computer-formalized Mechanisms	400
IX. Characteristic Mix of Coordination Mechanisms – Part I: Integrated Model	401
1. Abstract of Chapter	401
2. Viewpoint: An Approach to Identifying and Designing the Characteristic Mix of Coordination Mechanisms	406
2.1. The Life Cycle of Web Services as a Model to Structure the Characteristic Mix of Coordination Mechanisms	406
2.2. Life Cycle of Cloud Logistics Services and Link to Stakeholder Concerns	407

2.3. Contingency Factors	408
3. View: An Integrated Model of the Characteristic Mix of Coordination Mechanisms	420
3.1. Proposition and Mechanism Overview	420
3.2. Cloud-based Platform with Service Repository, Information Repository, and Virtual Marketplace (Implicit Coordination, Price)	424
3.3. Standardized, Semantic Service Descriptions (Service-orientation)	427
3.4. Servitization (Programmed Routine)	431
3.5. Boundary Permeability (Programmed Routine)	434
3.6. Self-service (System-supported Skills)	439
3.7. Market Mechanisms (Programmed Routine)	440
3.8. Internet of Things (System-supported Supervision)	445
3.9. Conclusion: A Computer-Formalized Mix along the Cloud Logistics Service Life Cycle	448
X. Characteristic Mix of Coordination Mechanisms – Part II: Servitization	449
1. Abstract of Chapter	449
2. Viewpoint: An Approach to Creating Service-oriented Physical Cloud Logistics Capabilities	452
3. View: A Four Step Process Model for Creating Service-oriented Physical Cloud Logistics Capabilities	454
3.1. Proposition	454
3.2. Step 1: Identification	458
3.3. Step 2: Resource and Capability Modeling	458
3.4. Step 3: Encapsulation of Virtual Resources and Capabilities	460
3.5. Step 4: Description	462
3.6. Conclusions: Implementation Hurdles and a Transformation of LSPs	463
XI. Characteristic Mix of Coordination Mechanisms – Part III: Standardized, Semantic Service Descriptions	464
1. Abstract of Chapter	464
2. Viewpoint: An Approach to Developing Service Descriptions of Physical Cloud Logistics Capabilities	466
3. View: A “Top-level” Ontology for the Descriptions of Physical Cloud Logistics Capabilities	466
3.1. Proposition	466
3.2. Service Functionality	469
3.3. Service Policies	470
3.4. Service Metrics	471
3.5. Service Interface Description	473
3.6. Service Reachability	475
3.7. Conclusions: Standardized, Semantic Service Descriptions and Market Governance	477
XII. Characteristic Mix of Coordination Mechanisms – Part IV: Market Mechanisms	477
1. Abstract of Chapter	477

2. Viewpoint: An Approach to Designing Market Mechanisms	480
2.1. Preliminary Considerations	480
2.2. Exchange and Preference Environment	481
2.3. Desirability of Economic Mechanism Properties for Stakeholders	482
2.4. Desirability of Solution Concepts for Stakeholders	486
3. View: A Tradeoff between Desirable Mechanism Properties	487
3.1. Proposition	487
3.2. Conditions	488
3.3. Conclusions: Acceptable Intensity of Price Competition	492
XIII. Summary of Propositions	493
G. Conclusions and Outlook	497
Bibliography	501
