Contents

Chapter 1 Principles of Green Food Processing (Including Lifecycle Assessment and Carbon Footprint)	1
<i>G. J. Thoma, S. W. Ellsworth and M. J. Yan</i>	
1.1 Introduction	1
1.2 Sustainability Assessment Tools	3
1.3 Standards and Regulations for Assessing Sustainability	4
1.3.1 The Role of Policy and Green Food Processing	5
1.4 Introduction to LCA	6
1.4.1 Goal and Scope Definition	8
1.4.2 Lifecycle Inventory Collection	10
1.4.3 Lifecycle Impact Assessment	11
1.4.4 Interpretation	12
1.5 LCIA of Food Processing	14
1.6 LCA of Food Production, Processing and Consumption	17
1.6.1 Cradle-to-grave Studies	17
1.6.2 Cradle-to-gate	19
1.6.3 Gate-to-gate	21
1.7 Case Study: Carbon Footprint of Fluid Milk Production	23
1.7.1 Methodology	23
1.7.2 Packaging	23
1.7.3 Electricity and Fuel	24
1.7.4 Results	24

Green Chemistry Series No. 53

Alternatives to Conventional Food Processing: 2nd Edition

Edited by Andrew Proctor

© The Royal Society of Chemistry 2018

Published by the Royal Society of Chemistry, www.rsc.org

1.8	An Overview of Emerging Practices and Technologies for Greener Food Production	27
1.8.1	High Hydrostatic Pressure Processing	27
1.8.2	Ohmic Heating of Foods	27
1.8.3	Pulsed Electric Field Processing	28
1.8.4	Plasma Processing	29
1.8.5	Microwave Food Processing	29
1.8.6	High-intensity Pulsed-light Food Processing	30
1.8.7	Infrared Food Processing	31
1.8.8	Ultrasonic Food Processing	31
1.8.9	Supercritical Fluid Extraction	32
1.8.10	Supercritical Fluid Pasteurization	33
1.8.11	Membrane Separations in Food Processing	33
1.9	Food Safety Surveillance Systems	34
1.10	Future Directions	36
1.10.1	Disability-adjusted Life-years – A Unifying Metric	36
1.10.2	Food Safety and LCA	38
1.10.3	Nutrition and LCA	38
1.10.4	Food Waste and Sustainability	40
1.10.5	Technological Advancement	42
1.11	Conclusion	43
	References	44

Chapter 2 Food Law and Sustainable Food Processing: A Comparison of the EU and the USA 53
Neal D. Fortin

2.1	Introduction	53
2.1.1	Roadmap for This Chapter	56
2.2	EU and US Law and Policy	57
2.2.1	History and Development of Food Law in the EU	57
2.2.2	History and Development of Food Law in the USA	58
2.2.3	General Food Law Provisions in the EU and the USA	60
2.2.4	Development of the International Concept of Sustainability	61
2.2.5	History of Sustainability Approach in the USA and EU	63
2.2.6	Sustainable Agriculture in the USA and EU	67

<i>Contents</i>	xi
2.2.7 Sustainable Food Processing	75
2.2.8 Consideration of Trade Agreements	79
2.3 Private Standards	80
2.3.1 Special Challenges of Private Standards	81
2.3.2 International Trade Implications of Private Standards	83
2.4 Conclusion	84
2.4.1 Food Law in the USA and EU	85
2.4.2 Private Standards and Actions	86
References	86
Chapter 3 Ohmic Heating of Foods	95
<i>James G. Lyng, Brian M. McKenna and Cristina Arroyo</i>	
3.1 Introduction	95
3.2 Basic Principle of Ohmic Heating	96
3.2.1 The Electrical Circuit	96
3.2.2 Mechanism of Ohmic Heating	97
3.2.3 Factors Influencing Heat Generation Rate	98
3.3 Electrical Conductivity of Foods	99
3.4 Physical and Chemical Changes to Foods During Ohmic Heating	100
3.4.1 Nutritional Effects	100
3.4.2 Protein Coagulation/Denaturation	100
3.5 Non-preserving Ohmic Heating Processes	101
3.5.1 Parboiling	101
3.5.2 Blanching	102
3.5.3 Thawing	104
3.5.4 Dough Proofing	105
3.5.5 Dehydration and Evaporation	105
3.5.6 Ohmically Assisted Peeling	106
3.5.7 Ohmically Assisted Extraction of Compounds from Vegetable Tissues	107
3.5.8 Ohmically Assisted Vegetable Softening	107
3.5.9 Ohmically Assisted Hydrodistillation	107
3.6 Microbial Inactivation During Ohmic Heating	107
3.7 Ohmic Sterilization	108
3.7.1 Technological Challenges in Validating Ohmic Sterilization Procedures	108
3.7.2 Temperature Measurement	108
3.7.3 Modelling of Ohmic Sterilization	112
3.7.4 Markers	112

3.7.5	Conductivity Differences	112
3.7.6	Solid-Liquid Flow	112
3.7.7	Commercial Uptake	113
3.8	Specific Food Products	113
3.8.1	Meat	113
3.8.2	Fish	116
3.8.3	Milk	117
3.8.4	Fruit and Fruit Juices	119
3.8.5	Egg	120
3.8.6	Vegetables	121
3.9	Economics of Ohmic Processing	122
3.10	Ohmic Heater Control Options	123
3.10.1	Control of Electricity Supply During Ohmic Heating	123
3.10.2	Control of the Extent of Pasteurization/ Cooking	124
3.10.3	Packaging for Ohmic Processing	124
3.11	Modelling	125
3.11.1	General Heating Theory	125
3.11.2	Model Development	125
3.11.3	Prediction of Temperature Profiles in Liquid Foods	126
3.11.4	Prediction of Temperature Profiles in Liquid Foods Containing Particulates	126
3.11.5	Modelling the Fouling Behaviour of Ohmic Heaters	128
3.11.6	Other Factors	128
	References	129

Chapter 4 Cold Plasma Processing to Improve Food Safety 138

Brendan A. Niemira

4.1	Introduction	138
4.2	Antimicrobial Modes of Action	139
4.3	Cold Plasma Feed Gases	140
4.4	Cold Plasma Equipment	141
4.4.1	Vacuum and Partial-pressure Cold Plasma Systems	141
4.4.2	Atmospheric Cold Plasma Systems	143
4.4.3	Dielectric Barrier Discharges	146
4.4.4	Enclosed, In-package Cold Plasma Systems	147

<i>Contents</i>	xiii
4.5 Conclusion	150
Acknowledgements	150
References	150
Chapter 5 Supercritical Fluid Pasteurization and Food Safety	153
<i>Sara Spilimbergo, Michael A. Matthews and Allesandro Zambon</i>	
5.1 Introduction	153
5.2 Supercritical Fluids and Green Technology	155
5.3 Current Issues in Food Pasteurization	158
5.3.1 Food Preservation	158
5.3.2 Nutritional Properties	160
5.3.3 Innovative Techniques	160
5.3.4 Packaging Materials	161
5.3.5 Modified Atmosphere Packaging (MAP)	162
5.4 Mechanisms and Biochemistry of Microbial Deactivation	163
5.4.1 Pressure: Permeability, Membrane Disruption, and Extraction	164
5.4.2 Temperature: Permeability and Extraction	165
5.4.3 pH: Cell Metabolism and Protein Activity	165
5.4.4 Fluid Flow and Contacting: Mass Transfer, Effect of Media, and Kinetics of Pasteurization	166
5.5 Applications of Supercritical Fluids for Food Preservation	167
5.5.1 Biofilms	169
5.5.2 Modeling Approaches for High-Pressure Microorganism Inactivation	170
5.5.3 Inactivation of Enzymes	170
5.5.4 Processes Based on Gases Other Than CO ₂	172
5.5.5 Subcellular Systems (Phages, Viruses, Proteins, Prions, Hazardous Macromolecular Substances)	173
5.5.6 Treatment of Solid Objects	174
5.5.7 Unsolved Problems to Date	175
5.5.8 Outlook and Discussion	176
5.5.9 Materials and Composites of Future Interest	176
5.6 Commercial Aspects	177
5.6.1 Equipment for CO ₂ Technology	177
5.6.2 Patents	181

5.6.3	Commercialization	181
5.6.4	Economic Aspects	184
5.7	Conclusion	184
	References	185
Chapter 6	Developments in the Processing of Foods and Natural Products Using Pressurized Fluids	196
	<i>Keerthi Srinivas and Jerry W. King</i>	
6.1	Introduction	196
6.2	Supercritical <i>Versus</i> Subcritical Fluids	197
6.3	Current Status of Supercritical Fluid Processing with CO ₂	206
6.4	Subcritical Fluids for Processing of Food and Natural Products	208
6.5	Multi-fluid and Unit Operation Processing Options	214
6.6	Multi-phase Fluids for Sustainable and “Green” Food Processing	221
6.7	Brief Introduction to High-pressure Pasteurization in Food Processing	227
6.8	Extraction <i>Versus</i> Reaction Using Pressurized Fluids	228
6.8.1	Extraction of Organic Acids and Lipids Using Supercritical Carbon Dioxide	229
6.8.2	Subcritical Water Extraction/Reaction to Produce Thermally Labile Substances from Natural Product Matrices	236
6.8.3	Subcritical Water Hydrolysis to Deconstruct Biopolymers Such as Proteins and Carbohydrates	239
6.9	Conclusions	241
	References	242
Chapter 7	High Hydrostatic Pressure Food Processing: Potential and Limitations	251
	<i>Stephanie Jung and Carole Tonello-Samson</i>	
7.1	Introduction	251
7.1.1	Rationale for the Interest in High-pressure Processing	251
7.1.2	Brief Description of Processing Steps and Concept of Adiabatic Heating	252
7.1.3	Is HPP a Green (Environmentally Friendly) Technology?	254

7.2	HPP as an Efficient Tool for Food Microbial Safety and Shelf Life Extension	255
7.2.1	Food Safety	255
7.2.2	Shelf Life	258
7.3	Nutritional and Toxicological Aspects of Pressurized Foods	261
7.4	Quality Attributes of Pressurized Food Products	263
7.4.1	Textural and Rheological Properties	263
7.4.2	Functional Properties	271
7.4.3	Color	272
7.4.4	Flavor	273
7.4.5	Allergenicity/Antigenicity	274
7.5	Pressure-assisted Extraction of Food Components	275
7.6	Commercial Applications of HPP	276
7.6.1	Juices and Beverages	288
7.6.2	Non-beverage Fruit and Vegetable Products	289
7.6.3	Meat Products	290
7.6.4	Seafood	292
7.6.5	Dairy Products	293
7.7	Industrial HPP Equipment	294
7.7.1	Design	294
7.7.2	Size and Output	299
7.7.3	Investment and Processing Costs	300
7.8	Final Remarks	301
	References	301

Chapter 8 Ultrasonic Food Processing 316

Thomas S. H. Leong, Gregory J. O. Martin and Muthupandian Ashokkumar

8.1	Introduction	316
8.2	Mechanisms Involved in Ultrasonic Food Processing	317
8.2.1	Acoustic Cavitation in Fluids	317
8.2.2	Physical Effects of Ultrasound	320
8.3	Delivery of Ultrasound into Food	322
8.3.1	Generation and Delivery of Ultrasonic Waves	324
8.3.2	Ultrasonic Parameters for Food Processing	325
8.3.3	Ultrasonic Processing Equipment	327
8.3.4	Ultrasound Propagation in Liquid Foods	328
8.3.5	Ultrasound Propagation in Solid Foods	328
8.3.6	Ultrasound Propagation in Foams	329

8.4	Ultrasonic Food Processing Applications	329
8.4.1	Applications Due to Mechanical Vibration Caused by Ultrasound	329
8.4.2	Applications Due to Physical Effects of Acoustic Cavitation	333
8.4.3	Applications Due to a Combination of Physical and Chemical Effects of Ultrasound Arising from Cavitation	343
8.5	Future Outlook and Conclusion	346
	Acknowledgements	346
	References	346
Chapter 9	High-intensity Pulsed Light Processing	355
	<i>Jaqueline O. de Moraes and Carmen I. Moraru</i>	
9.1	Introduction	355
9.2	Fundamentals of Pulsed Light Technology	356
9.2.1	Pulsed Light Dose	356
9.2.2	Components of Pulsed Light Systems	357
9.3	Microbial Inactivation Using Pulsed Light	358
9.3.1	Mechanisms of Inactivation	358
9.3.2	Critical Factors That Affect Microbial Inactivation by Pulsed Light	361
9.3.3	Microbial Inactivation Kinetics in Pulsed Light Treatment	366
9.4	Applications of Pulsed Light Treatment	368
9.4.1	Pulsed Light Treatment of Liquids	368
9.4.2	Pulsed Light Treatment of Solid Foods	370
9.4.3	Other Applications of Pulsed Light Treatment	378
9.5	Combination of Pulsed Light with Other Treatments	379
9.6	Sensory Effects on Products Treated with PL	380
9.7	Pulsed Light Systems	382
9.8	Conclusions	384
	References	384
Chapter 10	Infrared Food Processing Technology: Fundamentals and Case Studies of Recent Advances in Grain Processing	397
	<i>Griffiths G. Atungulu</i>	
10.1	Engineering Principles of Infrared Heating	397
10.1.1	Fundamentals	397
10.1.2	Infrared Emitters	399
10.1.3	Characteristics of Catalytic Infrared Emitters	401

<i>Contents</i>	xvii
10.2 Interaction of Infrared Radiation with Foods	402
10.2.1 Effect of Water Content, Product Thickness, and Physicochemical Nature	403
10.2.2 Selective Infrared Heating and Absorption of Foods	404
10.2.3 Radiation Model	405
10.3 Engineering Continuous Drying and Decontamination of Grains Using Infrared Heating	406
10.3.1 Description of a Newly Built Pilot-Scale Catalytic Infrared System	406
10.3.2 Case Study of Shelled Corn Drying and Decontamination	408
10.3.3 Case Study of Rice Drying	409
10.4 The Future of Infrared Heat Treatments	414
Acknowledgements	415
References	415
Chapter 11 Membrane Separations	418
<i>Koen Dewettinck, Thien Trung Le and Viet Bao Nguyen</i>	
11.1 Introduction	418
11.2 Types of Membrane Separation Processes	419
11.2.1 Pressure-driven Membrane Separations	419
11.2.2 Other Types of Membrane Separation Processes	420
11.3 Separation Characteristics	421
11.3.1 Filtration Modes	421
11.3.2 Membrane Separation Parameters	422
11.4 Concentration Polarization and Membrane Fouling	423
11.4.1 Concentration Polarization	423
11.4.2 Membrane Fouling	424
11.5 Membrane Characteristics and Membrane Modules	427
11.5.1 Membrane Characteristics	427
11.5.2 Membrane Modules	428
11.6 Enhancement of Membrane Separation Performance	432
11.6.1 Optimization of Operational Parameters	432
11.6.2 Effects of Feed Properties	437
11.6.3 Membrane Selection and Surface Modification	440

11.6.4	Modification of Membrane Module Configuration	441
11.6.5	Flow Manipulation	451
11.6.6	Applications of External-body Forces	456
11.6.7	Other Techniques	461
11.6.8	Selection of the Techniques	462
11.7	Membrane Cleaning and Sanitation	463
11.8	Comparison Between Membrane Separations and Corresponding Traditional Technologies	465
11.8.1	General Applications and Technological Advantages of Membrane Separations	465
11.8.2	Economic Aspects of Membrane Processing Applications	467
11.9	Applications of Membrane Separations in the Food Industry	468
11.9.1	Membrane Processes in the Dairy Industry	468
11.9.2	Membrane Processes in the Brewing Industry	471
11.9.3	Membrane Processes in the Winemaking Industry	472
11.9.4	Membrane Processes in the Production of Fruit and Vegetable Juices	474
11.9.5	Membrane Processes in the Sugar Industry	474
11.9.6	Membrane Processes in the Production of Soy Ingredients and Products	475
11.9.7	Membrane Processes in Tea and Coffee Production	475
11.9.8	Membrane Emulsification	476
11.9.9	Other Applications in the Food Industry	476
11.10	Conclusions and Perspectives	477
	Acknowledgements	478
	References	478
	Subject Index	499
