Introduction to the series	xiii
Preface	xv
CHAPTER 1 Intertemporal choice	1
Keith Marzilli Ericson, David Laibson	
1 Introduction	2
2 Present-focused preferences: theoretical commonalities	5
2.1 Present-biased preferences	7
2.2 Unitary-self models with temptation	10
2.3 Multiple-self models with simultaneous selves	12
2.4 Objective risks that reduce future value	14
2.5 Models with psychometric distortions	15
2.6 Models of myopia	17
2.7 Overview of models of present-focused preferences	18
2.8 Models that do not generate present-focused preferences	19
3 Empirical regularities and open puzzles	20
3.1 Preferences over monetary receipt timing	20
3.2 Preferences over consumption timing	25
3.3 Preference reversals	27
3.4 Procrastination	29
3.5 Naiveté	33
3.6 The effect of transactions costs	35
3.7 Lack of liquidity on household balance sheets	36
3.8 Commitment	38
3.9 Paternalistic policy and welfare	40
3.10 Preference for improving sequences	42
4 Puzzles without associated empirical regularities	43
4.1 How soon is now?	43
4.2 The role of temptation	44
4.3 Other mechanisms and complementary psychological conceptions	46
4.4 Stability and domain generality	48
4.5 Malleability and self-management	49
4.6 Retirement saving adequacy	50
5 Conclusion	51
References	52

CHAPTER 2	Errors in probabilistic reasoning and judgment biases	69
	Daniel J. Benjamin	
1	Introduction	70
2	Biased beliefs about random sequences	75
2.1	The gambler's fallacy and the Law of Small Numbers	75
2.2	The hot-hand bias	79
2.3	Additional biases in beliefs about random sequences	82
3	Biased beliefs about sampling distributions	83
3.1	Partition dependence	84
3.2	Sample-size neglect and Non-Belief in the Law of Large Numbers	90
3.3	Sampling-distribution-tails diminishing sensitivity	95
3.4	Overweighting the mean and the fallacy of large numbers	96
3.5	Sampling-distribution beliefs for small samples	98
3.6	Summary and comparison of sequence beliefs with sampling-distribution beliefs	99
4	Evidence on belief updating	100
4.1	Conceptual framework	102
4.2	Evidence from simultaneous samples	104
4.3	Evidence from sequential samples	121
5	Theories of biased inference	126
5.1	Biased sampling-distribution beliefs	127
5.2	Conservatism bias	132
5.3	Extreme-belief aversion	134
5.4	Summary	136
6	Base-rate neglect	136
7	The representativeness heuristic	143
7.1	Representativeness	143
7.2	The strength-versus-weight theory of biased updating	147
7.3	Economic models of representativeness	149
7.4	Modeling representativeness versus specific biases	154
8	Prior-biased inference	154
8.1	Conceptual framework	155
8.2	Evidence and models	156
9	Preference-biased inference	161
9.1	Conceptual framework	162
9.2	Evidence and models	163
10	Discussion	166
10.1	When do people update too much or too little?	167
10.2	Modeling challenges	168
10.3	Generalizability from the lab to the field	169
10.4	Connecting with other areas of economics	172

	10.5	Some possible directions for future research	173
		References	173
CHAPTER 3		Errors in strategic reasoning	187
		Erik Eyster	
	1	Introduction	188
		1.1 Game-theory background	189
		1.2 Behavioral-game-theory background	190
		1.3 Chapter aims	191
		1.4 Exclusions	192
		1.5 Modeling approaches	195
	2	Setup and taxonomy of errors	197
	3	Mispredicting actions	200
		3.1 Lab evidence	204
		3.2 Field evidence	208
		3.3 Models	209
	4	Underinference and misinference	216
		4.1 Folk wisdom on underinference	216
		4.2 Lab evidence	218
		4.3 Field evidence	226
		4.4 Models	227
		4.5 Social versus private inference	236
		4.6 Learning	237
		4.7 Implications	237
		4.8 Misinference	239
	5	Failure to best respond	243
		5.1 Epsilon equilibrium	243
		5.2 Quantal-response equilibrium	244
		5.3 Applications of QRE	246
		5.4 Failure to understand payoffs	248
	6	From horserace to foxtrot: applying solution concepts	249
	7	Conclusion	251
		References	254
CHAPTER 4		Behavioral inattention	261
		Xavier Gabaix	
	1	Introduction	263
	2	A simple framework for modeling attention	266
		2.1 An introduction: Anchoring and adjustment via Gaussian signal extraction	266
		2.2 Models with deterministic attention and action	267
		2.3 Unifying behavioral biases: Much of behavioral economics may reflect a form of inattention	269
		2.4 Psychological underpinnings	277

3	Measuring attention: Methods and findings	279
3.1	Measuring attention: Methods	279
3.2	Measuring attention: Findings	283
3.3	Attention across stakes and studies	288
3.4	Different meanings of “attention”	291
4	Models of endogenous attention: Deterministic action	292
4.1	Paying more attention to more important variables: The sparsity model	292
4.2	Proportional thinking: The salience model of Bordalo, Gennaioli, Shleifer	298
4.3	Other themes	302
4.4	Limitation of these models	304
5	A behavioral update of basic microeconomics: Consumer theory, Arrow–Debreu	305
5.1	Textbook consumer theory	305
5.2	Textbook competitive equilibrium theory	309
5.3	What is robust in basic microeconomics?	311
6	Models with stochastic attention and choice of precision	312
6.1	Bayesian models with choice of information	312
6.2	Entropy-based inattention: “Rational inattention”	313
6.3	Random choice via limited attention	318
7	Allocation of attention over time	320
7.1	Generating sluggishness: Sticky action, sticky information, and habits	320
7.2	Optimal dynamic inattention	324
7.3	Other ways to generate dynamic adjustment	326
7.4	Behavioral macroeconomics	326
8	Open questions and conclusion	327
Appendix A Further derivations and mathematical complements		328
A.1	Further derivations	328
A.2	Mathematical complements	331
Appendix B Data methodology		332
References		334
CHAPTER 5	Behavioral development economics	345
Michael Kremer, Gautam Rao, Frank Schilbach		
1	Introduction	346
2	High rates of return without rapid growth	354
2.1	The Euler equation puzzle	354
2.2	Present bias	359
2.3	Reference-dependent preferences	364
2.4	Other behavioral factors	368
3	Health	368
3.1	Underinvestment in preventive health	369
3.2	Present bias	372

3.3	Biased beliefs	380
3.4	Incorrect mental models	385
3.5	Other behavioral factors	386
4	Savings	387
4.1	Commitment savings devices	388
4.2	Designing financial products for behavioral agents	390
5	Risk and insurance	391
5.1	Non-standard preferences affecting insurance demand	393
5.2	Non-standard beliefs affecting insurance demand	394
6	Technology adoption	395
6.1	Limited attention	395
6.2	Present bias	397
6.3	Behavioral learning	398
7	Labor	401
7.1	Labor markets in developing countries	401
7.2	Labor supply and worker productivity	404
7.3	Wages and behavioral workers	408
7.4	Selection of workers	412
7.5	Female labor-force participation	413
8	Firms	415
8.1	Are firms in developing countries more “behavioral”?	415
8.2	Behavioral firms: evidence and applications	417
9	Social preferences, culture, and development	420
9.1	History of views of human behavior in economic development	421
9.2	Differences in social preferences across societies	423
9.3	Do social preferences and culture matter for development?	425
9.4	The impact of contact and policies on social preferences and norms	428
10	The psychology of poverty	430
10.1	Scarcity	430
10.2	Deprivations beyond lack of money	433
10.3	Mental health	434
10.4	Aspirations, hope, and religiosity	436
11	Conclusion	439
	References	440
CHAPTER 6	Behavioral economics and health-care markets	459
	Amitabh Chandra, Benjamin Handel, Joshua Schwartzstein	
1	Introduction	460
2	Consumer choice of insurance	463
2.1	Demand for insurance	464
2.2	Implications for insurance markets and their regulation	476

3	Treatment choices	482
3.1	Consumer demand for treatment	482
3.2	Re-thinking basic health insurance tradeoffs	488
3.3	Implications for insurance markets and policy	491
4	Future directions for behavioral health economics	494
4.1	Future work on health-insurance choices	494
4.2	Future work on health-treatment choices	495
	References	497
	Index	503
