Architecture for Blockchain Applications

 Springer

Contents

Part I Blockchain in Software Architecture

1	Introduction	3
1.1	What Is Blockchain and Why Should I Care?	3
1.2	Blockchain-Based Applications	9
1.3	Blockchain Functionality	14
1.4	Blockchain Non-functional Properties	19
1.5	Blockchain Architecture Design	21
1.6	Summary	24
1.7	Further Reading	24
2	Existing Blockchain Platforms	27
2.1	Bitcoin	27
2.2	Ethereum	35
2.3	Hyperledger Fabric	40
2.4	Other Representative Blockchain Platforms	44
2.5	Further Reading	44
3	Varieties of Blockchains	45
3.1	Fundamental Properties of Blockchain	45
3.2	Decentralization	46
3.3	Ledger Structure	50
3.4	Consensus Protocol	51
3.5	Block Configuration	53
3.6	Auxiliary Blockchains	54
3.7	Anonymity	57
3.8	Incentives	58
3.9	Summary	58
3.10	Further Reading	58
4	Example Use Cases	61
4.1	Agricultural Supply Chains	61
4.2	Open Data Registry	67

- 4.3 International Money Transfers 71
- 4.4 Electricity Contract Selection and Continuous Reporting 75
- 4.5 Further Reading 78

Part II Architecting Blockchain-Based Applications

- 5 Blockchain in Software Architecture 83**
 - 5.1 Blockchain as an Architectural Element 83
 - 5.2 Blockchain as Storage Element 84
 - 5.3 Blockchain as Computational Element 88
 - 5.4 Blockchain as Communication Mechanism 89
 - 5.5 Blockchain as an Asset Management and Control Mechanism 90
 - 5.6 Integrating Blockchain into a System as a Component 91
 - 5.7 Summary 92
 - 5.8 Further Reading 92
- 6 Design Process for Applications on Blockchain 93**
 - 6.1 Evaluation of Suitability 93
 - 6.2 Example Use Cases for Suitability Evaluation 100
 - 6.3 Design Process for Blockchain-Based Systems 104
 - 6.4 Summary 111
 - 6.5 Further Reading 111
- 7 Blockchain Patterns 113**
 - 7.1 Patterns on Interacting with the External World 115
 - 7.2 Data Management Patterns 121
 - 7.3 Security Patterns 131
 - 7.4 Contract Structural Patterns 137
 - 7.5 Summary 147
 - 7.6 Further Reading 148
- 8 Model-Driven Engineering for Blockchain Applications 149**
 - 8.1 Introduction 149
 - 8.2 Model-Driven Generation of Smart Contract Code
for Collaborative Business Processes 150
 - 8.3 Model-Driven Registry Generation for Blockchain 162
 - 8.4 Summary 170
 - 8.5 Further Reading 171

Part III Quality Impact of Using Blockchain

- 9 Cost 175**
 - 9.1 On-Chain Data Cost 176
 - 9.2 Smart Contract Cost 178
 - 9.3 Cost Models 178
 - 9.4 Using and Evaluating the Cost Model 184
 - 9.5 Discussion 192

- 9.6 Summary 194
- 9.7 Further Reading 195
- 10 Performance** 197
 - 10.1 Performance Characteristics of Blockchain 197
 - 10.2 Architectural Performance Modelling 199
 - 10.3 Predicting Latency for Blockchain-Based Systems 199
 - 10.4 Architectural Decision-Making 208
 - 10.5 Summary 210
 - 10.6 Further Reading 211
- 11 Dependability and Security** 213
 - 11.1 Confidentiality 214
 - 11.2 Integrity 215
 - 11.3 Safety 216
 - 11.4 Maintainability 217
 - 11.5 Availability and Reliability 218
 - 11.6 Variation in Blockchain Transaction Inclusion 219
 - 11.7 Aborting and Retrying Blockchain Transactions 229
 - 11.8 Summary 234
 - 11.9 Further Reading 234
- Part IV Case Studies**
- 12 Case Study: AgriDigital** 239
 - 12.1 Agricultural Supply Chains 239
 - 12.2 The AgriDigital Vision 241
 - 12.3 Designing for a Business Use Case 247
 - 12.4 Summary 254
- 13 Case Study: SecureVote** 257
 - 13.1 Introduction and Background 257
 - 13.2 The MVP Prototype 259
 - 13.3 Building Tokenvote 261
 - 13.4 Details and Code Samples 267
 - 13.5 Summary 278
 - 13.6 Further Reading 278
- 14 Case Study: originChain** 279
 - 14.1 Introduction and Background 279
 - 14.2 Architecture of originChain 282
 - 14.3 Analysis 287
 - 14.4 Discussion 291
 - 14.5 Summary 292

Epilogue 295
