List of Figures **xxi**
List of Tables **xxvii**
List of Algorithms **xxix**
Preface **xxxi**
About the Companion Website **xxxix**

1 Introduction **1**

1.1 The Evolution of Supply Chain Theory 1
1.2 Definitions and Scope 2
1.3 Levels of Decision-Making in Supply Chain Management 4

2 Forecasting and Demand Modeling **5**

2.1 Introduction 5
2.2 Classical Demand Forecasting Methods 6
2.2.1 Moving Average 6
2.2.2 Exponential Smoothing 7
2.2.3 Linear Regression 13
2.3 Forecast Accuracy 15
2.3.1 MAD, MSE, and MAPE 15
2.3.2 Forecast Errors for Moving Average and Exponential Smoothing 16
2.4 Machine Learning in Demand Forecasting 17
2.4.1 Introduction 17

2.4.2 Machine Learning 18
2.5 Demand Modeling Techniques 23
2.6 Bass Diffusion Model 24
2.6.1 The Model 25
2.6.2 Discrete-Time Version 28
2.6.3 Parameter Estimation 29
2.6.4 Extensions 29
2.7 Leading Indicator Approach 30
2.8 Discrete Choice Models 33
2.8.1 Introduction to Discrete Choice 33
2.8.2 The Multinomial Logit Model 34
2.8.3 Example Application to Supply Chain Management 37
Case Study: Semiconductor Demand Forecasting at Intel 38
Problems 39

3 Deterministic Inventory Models 45

3.1 Introduction to Inventory Modeling 45
3.1.1 Why Hold Inventory? 45
3.1.2 Classifying Inventory Models 47
3.1.3 Costs 48
3.1.4 Inventory Level and Inventory Position 50
3.1.5 Roadmap 50
3.2 Continuous Review: The Economic Order Quantity Problem 51
3.2.1 Problem Statement 51
3.2.2 Cost Function 52
3.2.3 Optimal Solution 53
3.2.4 Sensitivity Analysis 55
3.2.5 Order Lead Times 56
3.3 Power-of-Two Policies 57
3.3.1 Analysis 57
3.3.2 Error Bound 58
3.4 The EOQ with Quantity Discounts 60
3.4.1 All-Units Discounts 62
3.4.2 Incremental Discounts 64
3.4.3 Modified All-Units Discounts 66
3.5 The EOQ with Planned Backorders 67
3.6 The Economic Production Quantity Model 70
3.7 Periodic Review: The Wagner–Whitin Model 72
3.7.1 Problem Statement 72
3.7.2 MIP Formulation 72
3.7.3 Dynamic Programming Algorithm 73
3.7.4 Extensions 76

Case Study: Ice Cream Production and Inventory at Scotsburn Dairy Group 76
Problems 77

4 Stochastic Inventory Models: Periodic Review 87

4.1 Inventory Policies 87
4.2 Demand Processes 89
4.3 Periodic Review with Zero Fixed Costs: Base-Stock Policies 89
4.3.1 Base-Stock Policies 90
4.3.2 Single Period: The Newsvendor Problem 90
4.3.3 Finite Horizon 102
4.3.4 Infinite Horizon 105
4.4 Periodic Review with Nonzero Fixed Costs: (s, S) Policies 114
4.4.1 (s, S) Policies 114
4.4.2 Single Period 115
4.4.3 Finite Horizon 116
4.4.4 Infinite Horizon 117
4.5 Policy Optimality 123
4.5.1 Zero Fixed Costs: Base-Stock Policies 124
4.5.2 Nonzero Fixed Costs: (s, S) Policies 129
4.6 Lost Sales 136
4.6.1 Zero Lead Time 136
4.6.2 Nonzero Lead Time 137
Case Study: Optimization of Warranty Inventory at Hitachi 138
Problems 140

5 Stochastic Inventory Models: Continuous Review 155

5.1 (r, Q) Policies 155
5.2 Exact (r, Q) Problem with Continuous Demand Distribution 156
5.2.1 Expected Cost Function 157
5.2.2 Optimality Conditions 159
5.3 Approximations for (r, Q) Problem with Continuous Distribution 161
5.3.1 Expected-Inventory-Level Approximation 161
5.3.2 EOQB Approximation 166
5.3.3 EOQ+SS Approximation 166
5.3.4 Loss-Function Approximation 167
5.3.5 Performance of Approximations 169
5.4 Exact (r, Q) Problem with Continuous Distribution: Properties of Optimal r and Q 170
5.4.1 Optimization of r and Q 172
5.4.2 Noncontrollable and Controllable Costs 172

5.4.3 Relationship to EOQB 173
5.5 Exact (r, Q) Problem with Discrete Distribution 177
Case Study: (r, Q) Inventory Optimization at Dell 180
Problems 182

6 Multiechelon Inventory Models 187

6.1 Introduction 187
6.1.1 Multiechelon Network Topologies 188
6.1.2 Stochastic vs. Guaranteed Service 189
6.2 Stochastic-Service Models 191
6.2.1 Serial Systems 191
6.2.2 Exact Approach for Serial Systems 193
6.2.3 Heuristic Approach for Serial Systems 197
6.2.4 Other Network Topologies 202
6.3 Guaranteed-Service Models 203
6.3.1 Introduction 203
6.3.2 Demand 204
6.3.3 Single-Stage Network 204
6.3.4 Serial Systems 207
6.3.5 Tree Systems 210
6.3.6 Solution Method 211
6.4 Closing Thoughts 217
Case Study: Multiechelon Inventory Optimization at Procter & Gamble 222
Problems 223

7 Pooling and Flexibility 229

7.1 Introduction 229
7.2 The Risk-Pooling Effect 230
7.2.1 Overview 230
7.2.2 Problem Statement 231
7.2.3 Decentralized System 231
7.2.4 Centralized System 231
7.2.5 Comparison 232
7.2.6 Magnitude of Risk-Pooling Effect 234
7.2.7 Closing Thoughts 235
7.3 Postponement 236
7.4 Transshipments 237
7.4.1 Introduction 237
7.4.2 Problem Statement 237
7.4.3 Expected Cost 240
7.4.4 Benefits of Transshipments 241

7.5 Process Flexibility 243
7.5.1 Introduction 243
7.5.2 Flexibility Design Guidelines 245
7.5.3 Optimality of the Chaining Structure 248
7.6 A Process Flexibility Optimization Model 253
7.6.1 Formulation 253
7.6.2 Lagrangian Relaxation 254
Case Study: Risk Pooling and Inventory Management at Yedioth Group 257
Problems 259

8 Facility Location Models 267

8.1 Introduction 267
8.2 The Uncapacitated Fixed-Charge Location Problem 269
8.2.1 Problem Statement 269
8.2.2 Formulation 270
8.2.3 Lagrangian Relaxation 272
8.2.4 The DUALOC Algorithm 282
8.2.5 Heuristics for the UFLP 291
8.3 Other Minisum Models 295
8.3.1 The Capacitated Fixed-Charge Location Problem (CFLP) 296
8.3.2 The p-Median Problem (pMP) 298
8.4 Covering Models 305
8.4.1 The Set Covering Location Problem (SCLP) 306
8.4.2 The Maximal Covering Location Problem (MCLP) 307
8.4.3 The p-Center Problem (pCP) 309
8.5 Other Facility Location Problems 314
8.5.1 Undesirable Facilities 314
8.5.2 Competitive Location 315
8.5.3 Hub Location 316
8.5.4 Dynamic Location 317
8.6 Stochastic and Robust Location Models 317
8.6.1 Introduction 317
8.6.2 The Stochastic Fixed-Charge Location Problem 318
8.6.3 The Minimax Fixed-Charge Location Problem 320
8.7 Supply Chain Network Design 321
8.7.1 Node Design 322
8.7.2 Arc Design 329
Case Study: Locating Fire Stations in Istanbul 332
Problems 335

9 Supply Uncertainty 355

9.1 Introduction to Supply Uncertainty 355
9.2 Inventory Models with Disruptions 356
9.2.1 The EOQ Model with Disruptions 357
9.2.2 The Newsvendor Problem with Disruptions 360
9.3 Inventory Models with Yield Uncertainty 365
9.3.1 The EOQ Model with Yield Uncertainty 366
9.3.2 The Newsvendor Problem with Yield Uncertainty 369
9.4 A Multisupplier Model 372
9.4.1 Problem Statement 373
9.4.2 Expected Profit 374
9.4.3 Optimality Conditions 375
9.4.4 Supplier Selection 377
9.4.5 Closing Thoughts 383
9.5 The Risk-Diversification Effect 384
9.5.1 Problem Statement 384
9.5.2 Notation 384
9.5.3 Optimal Solution 385
9.5.4 Mean and Variance of Optimal Cost 385
9.5.5 Supply Disruptions and Stochastic Demand 386
9.6 A Facility Location Model with Disruptions 387
9.6.1 Introduction 387
9.6.2 Notation 390
9.6.3 Formulation 391
9.6.4 Lagrangian Relaxation 392
9.6.5 Trade-off Curves 393
Case Study: Disruption Management at Ford 395
Problems 396

10 The Traveling Salesman Problem 403

10.1 Supply Chain Transportation 403
10.2 Introduction to the TSP 404
10.2.1 Overview 404
10.2.2 Formulation of the TSP 406
10.3 Exact Algorithms for the TSP 408
10.3.1 Dynamic Programming 408
10.3.2 Branch-and-Bound 408
10.3.3 Branch-and-Cut 410
10.4 Construction Heuristics for the TSP 416
10.4.1 Nearest Neighbor 417
10.4.2 Nearest Insertion 419
10.4.3 Farthest Insertion 423
10.4.4 Convex Hull 425

10.4.5 GENI 427
10.4.6 Minimum Spanning Tree Heuristic 430
10.4.7 Christofides' Heuristic 433
10.5 Improvement Heuristics for the TSP 436
10.5.1 k-Opt Exchanges 436
10.5.2 Or-Opt Exchanges 438
10.5.3 Unstringing and Stringing 440
10.6 Bounds and Approximations for the TSP 442
10.6.1 The Held–Karp Bound 442
10.6.2 Control Zones 449
10.6.3 Integrality Gap 450
10.6.4 Approximation Bounds 451
10.6.5 Tour Length as a Function of n 451
10.7 World Records 452
Case Study: Routing Meals on Wheels Deliveries 453
Problems 455

11 The Vehicle Routing Problem 463

11.1 Introduction to the VRP 463
11.1.1 Overview 463
11.1.2 Notation and Assumptions 465
11.1.3 Formulation of the VRP 465
11.2 Exact Algorithms for the VRP 468
11.2.1 Dynamic Programming 468
11.2.2 Branch-and-Bound 470
11.2.3 Branch-and-Cut 471
11.2.4 Set Covering 472
11.3 Heuristics for the VRP 475
11.3.1 The Clarke–Wright Savings Heuristic 475
11.3.2 The Sweep Heuristic 480
11.3.3 The Location-Based Heuristic 481
11.3.4 Improvement Heuristics 488
11.3.5 Metaheuristics 488
11.4 Bounds and Approximations for the VRP 495
11.4.1 TSP-Based Bounds 495
11.4.2 Optimal Objective Function Value as a Function of n 497
11.5 Extensions of the VRP 498
11.5.1 Distance-Constrained VRP 499
11.5.2 VRP with Time Windows 499
11.5.3 VRP with Backhauls 500
11.5.4 VRP with Pickups and Deliveries 500
11.5.5 Periodic VRP 500

Case Study: ORION: Optimizing Delivery Routes at UPS 501
Problems 502

12 Integrated Supply Chain Models 511

12.1 Introduction 511
12.2 A Location–Inventory Model 512
12.2.1 Introduction 512
12.2.2 Problem Statement 514
12.2.3 Notation 514
12.2.4 Objective Function 515
12.2.5 NLIP Formulation 516
12.2.6 Lagrangian Relaxation 517
12.2.7 Column Generation 524
12.2.8 Conic Optimization 527
12.3 A Location–Routing Model 529
12.4 An Inventory–Routing Model 531
Case Study: Inventory–Routing at Frito-Lay 534
Problems 535

13 The Bullwhip Effect 539

13.1 Introduction 539
13.2 Proving the Existence of the Bullwhip Effect 541
13.2.1 Introduction 541
13.2.2 Demand Signal Processing 542
13.2.3 Rationing Game 546
13.2.4 Order Batching 548
13.2.5 Price Speculation 551
13.3 Reducing the Bullwhip Effect 552
13.3.1 Demand Signal Processing 552
13.3.2 Rationing Game 554
13.3.3 Order Batching 554
13.3.4 Price Speculation 554
13.4 Centralizing Demand Information 555
13.4.1 Centralized System 555
13.4.2 Decentralized System 556
Case Study: Reducing the Bullwhip Effect at Philips Electronics 556
Problems 559

14 Supply Chain Contracts 563

14.1 Introduction 563
14.2 Introduction to Game Theory 564

14.3 Notation 565
14.4 Preliminary Analysis 566
14.5 The Wholesale Price Contract 568
14.6 The Buyback Contract 574
14.7 The Revenue Sharing Contract 578
14.8 The Quantity Flexibility Contract 581
Case Study: Designing a Shared-Savings Contract at McGriff Treading Company 584
Problems 586

15 Auctions 591

15.1 Introduction 591
15.2 The English Auction 593
15.3 Combinatorial Auctions 595
15.3.1 The Combinatorial Auction Problem 595
15.3.2 Solving the Set-Packing Problem 597
15.3.3 Truthful Bidding 598
15.4 The Vickrey–Clarke–Groves Auction 599
15.4.1 Introduction 599
15.4.2 Weaknesses of the VCG Auction 602
15.4.3 VCG Auction as a Cooperative Game 605
Case Study: Procurement Auctions for Mars 608
Problems 610

16 Applications of Supply Chain Theory 615

16.1 Introduction 615
16.2 Electricity Systems 615
16.2.1 Energy Storage 616
16.2.2 Transmission Capacity Planning 621
16.2.3 Electricity Network Design 623
16.3 Health Care 625
16.3.1 Production Planning and Contracting for Influenza Vaccines 625
16.3.2 Inventory Management for Blood Platelets 628
16.4 Public Sector Operations 632
16.4.1 Disaster Relief Routing 632
16.4.2 Passenger Screening 635
16.4.3 Public Housing Location 637
Case Study: Optimization of the Natural Gas Supply Chain in China 639
Problems 641

Appendix A: Multiple-Chapter Problems 643

Problems 643

Appendix B: How to Write Proofs: A Short Guide 651

B.1 How to Prove Anything 651
B.2 Types of Things You May Be Asked to Prove 653
B.3 Proof Techniques 655
B.3.1 Direct Proof 655
B.3.2 Proof by Contradiction 655
B.3.3 Proof by Mathematical Induction 656
B.3.4 Proof by Cases 657
B.4 Other Advice 657

Appendix C: Helpful Formulas 661

C.1 Positive and Negative Parts 661
C.2 Standard Normal Random Variables 662
C.3 Loss Functions 662
C.3.1 General Continuous Distributions 662
C.3.2 Standard Normal Distribution 663
C.3.3 Nonstandard Normal Distributions 664
C.3.4 General Discrete Distributions 664
C.3.5 Poisson Distribution 665
C.4 Differentiation of Integrals 665
C.4.1 Variable of Differentiation Not in Integral Limits 665
C.4.2 Variable of Differentiation in Integral Limits 665
C.5 Geometric Series 666
C.6 Normal Distributions in Excel and MATLAB 666
C.7 Partial Expectations 667

Appendix D: Integer Optimization Techniques 669

D.1 Lagrangian Relaxation 669
D.1.1 Overview 669
D.1.2 Bounds 670
D.1.3 Subgradient Optimization 672
D.1.4 Stopping Criteria 674
D.1.5 Other Problem Types 674
D.1.6 Branch-and-Bound 675
D.1.7 Algorithm Summary 675
D.2 Column Generation 675
D.2.1 Overview 675
D.2.2 Master Problem and Subproblem 677
D.2.3 An Example: The Cutting Stock Problem 678

D.2.4 Column Generation for Integer Programs 680
