# Contents

Contributors.....	xiii
Preface.....	xvii

## **CHAPTER 1 Sustainable food systems: diversity, scope and challenges..... 1**

*Peter Jeranyama, BSc Agriculture Honors (Crop Science),  
MS Crop and Soil Sciences, PhD. Crop and Soil Sciences,  
Anil Shrestha and Nilhari Neupane*

Introduction.....	1
Case study 1 African smallholder system.....	2
Zimbabwe smallholder cropping systems.....	3
Case study 2 Vegetable production in periurban region of Nepal.....	5
Pesticides use in vegetables.....	6
Case study 3 North central US cropping systems.....	7
Case study 4 Massachusetts cranberry production system.....	8
Yield gaps.....	10
Climate change impact.....	11
Conclusions.....	11
References.....	12
Further reading.....	16

## **CHAPTER 2 Ecosystem services in sustainable food systems: operational definition, concepts, and applications..... 17**

*C.C. Du Preez, PhD, C.W. van Huyssteen, PhD,  
E. Kotzé, PhD and J.J. van Tol, PhD*

Introduction.....	17
Ecosystem services: definitions and concepts.....	19
Biosphere including subunits.....	19
Different ecosystem services.....	20
Ecosystem services and sustainable development goals.....	23
Ecosystem services and cycling processes in food systems.....	23
Water cycle.....	25
Carbon cycle.....	26
Nutrient cycles.....	26
Ecosystem services and changes.....	28
Drivers causing ecosystem services change.....	31
Global trends impacting ecosystem services.....	31

Impact of agriculture on ecosystem services.....	33
Ecosystem service changes and human well-being.....	35
Projected changes in ecosystems.....	39
Conclusions.....	40
References.....	40
<b>CHAPTER 3 Indices to identify and quantify ecosystem services in sustainable food systems.....</b>	<b>43</b>
<i>Paramu L. Mafongoya, BSc, MSc, PhD and</i>	
<i>Gudeta W. Sileshi, BSc, MSc, PhD</i>	
Introduction.....	43
Methods, definitions, and circumscription.....	44
Synthesis.....	45
Indicators and indices of provisioning services.....	45
Indicators and indices of regulation and maintenance services.....	53
Future research.....	65
References.....	66
<b>CHAPTER 4 Harnessing ecosystem services from biological nitrogen fixation.....</b>	<b>73</b>
<i>Sipho T. Maseko, PhD, Mpelang P. Maredi, BSc,</i>	
<i>Cherian Mathews, PhD and Felix D. Dakora, PhD</i>	
Introduction.....	73
N contribution to soil.....	75
N contribution by legume cover crops.....	78
Factors affecting N contribution by legumes.....	78
Soil mineral enrichment by symbiotic legumes.....	79
Growth and grain yield associated with legume/cereal rotation.....	80
Effect of legume/cereal rotation on the fertility of soils.....	82
Effect of legume/cereal rotation on suppression of plant diseases.....	84
Effect of legume/cereal rotation on microbial populations in the soil.....	84
References.....	85
Further reading.....	94

<b>CHAPTER 5</b>	<b>The role of synthetic fertilizers in enhancing ecosystem services in crop production systems in developing countries.....</b>	<b>95</b>
	<i>Justice Nyamangara, Jefline Kodzwa, Esther Nyaradzo Masvaya and Gabriel Soropa</i>	
	Introduction.....	95
	The role of fertilizer in the agricultural Green Revolution of Zimbabwe.....	97
	The role of fertilizer in Zimbabwe's smallholder-led Agricultural Revolution.....	98
	Potential environmental risk of fertilizers use.....	99
	The role of fertilizer in the agricultural Green Revolution in Malawi.....	100
	Role of synthetic fertilizers in the sustainability of conservation agriculture.....	101
	Role of synthetic fertilizer in CA systems in sub-Saharan Africa and South Asia.....	102
	Role of synthetic fertilizer in CA success in the Americas.....	104
	Environmental effects of conservation agriculture.....	105
	Fertilizer microdosing in semiarid areas of sub-Saharan Africa.....	107
	Microdosing and crop productivity in SSA.....	108
	Environmental effects of fertilizer microdosing.....	110
	General conclusion.....	111
	References.....	111
<b>CHAPTER 6</b>	<b>Reinforcing ecosystem services through conservation agriculture in sustainable food systems.....</b>	<b>119</b>
	<i>P.H. Nyanga, B.B. Umar, D. Chibamba, K.H. Mubanga, C.F. Kunda-Wamuwi and B.M. Mushili</i>	
	Introduction.....	119
	Conservation agriculture.....	120
	Ecosystem services.....	121
	Sustainable food systems.....	121
	Conservation agriculture and ecosystem services nexus.....	122
	Field and farm scale level.....	123
	Diversity of land use across landscapes level.....	123
	Land use interactions at landscape level.....	123
	Conservation agriculture development and practice in Africa—case of Zambia.....	125

Development trajectory of conservation agriculture in Zambia .....	126
Challenges and successes of conservation agriculture practice in Zambia.....	127
Implications of the conservation agriculture-ecosystem services nexus on sustainable food systems .....	128
Reduction in crop yield variability.....	128
Improved household food security .....	129
Improved soil health.....	129
Higher dietary diversity among households practicing conservation agriculture.....	130
References.....	130
<b>CHAPTER 7 Ecosystem services from different livestock management systems .....</b>	<b>135</b>
<i>Irvin Mpofo, BSc Hons, MSc, MBA, PhD</i>	
Introduction.....	135
Livestock provisioning services.....	135
Ecosystem services from different livestock management systems.....	136
Intensive livestock ecosystems .....	136
Advantages of intensive livestock farming.....	136
Disadvantages of intensive livestock farming.....	136
The entry points to maximize ecosystem service in intensive livestock and the development trajectory.....	137
Semi-intensive/extensive ecosystems.....	137
The entry points to maximize ecosystem service in semi-intensive livestock and the development trajectory .....	138
Extensive livestock ecosystems .....	138
Wildlife production peripheral areas/environments .....	138
The entry points to maximize ecosystem service in extensive livestock and the development trajectory.....	139
Constraints to sustainable exploitation of livestock ecosystems .....	139
Conclusions.....	140
References.....	140
Further reading.....	140

<b>CHAPTER 8 Crop-livestock integration to enhance ecosystem services in sustainable food systems.....</b>	<b>141</b>
<i>Sabine Homann-Kee Tui, Roberto O. Valdivia, Katrien Descheemaeker, Trinity Senda, Patricia Masikati, Milton T. Makumbe and Andre F. van Rooyen</i>	
Introduction.....	141
Crop-livestock systems and ecosystem services.....	143
Key characteristics of crop-livestock systems.....	143
Ecosystem services provided by crop-livestock systems .....	144
Challenges and trade-offs for crop-livestock integration enhancing ecosystem services.....	146
Low productivity of both crops and livestock .....	147
Spatial heterogeneity.....	148
Climate change effects.....	148
Socioeconomic drivers.....	148
Agricultural transformation for improving ecosystem services.....	149
Paradigm and goals.....	149
Systems structure and feedback.....	149
Structural elements .....	150
How can we test and analyze priorities and options for this transformation? .....	150
Regional integrated assessment .....	151
Stakeholder engagement to prepare conditions for uptake.....	152
Application: an example from smallholder crop-livestock systems in semiarid Zimbabwe.....	152
The case: farming in Nkayi district.....	152
Enhancing ecosystem services through crop-livestock integration.....	153
Ecosystem services in sustainable versus fast economic growth pathways.....	155
Provisioning .....	155
Supporting.....	155
Regulating.....	157
Cultural.....	157
Conclusions.....	161
Importance of crop livestock integration.....	161
Assessment approaches.....	162
Significance for policy and scaling .....	163
Acknowledgments.....	163
References.....	163

<b>CHAPTER 9 Ecosystem services in doubled-up legume systems</b> .....	171
<i>Regis Chikowo, MPhil, PhD, Vimbayi Chimonyo, MSc, PhD, Chiwimbo Gwenambira, MSc and Sieg Snapp, MSc, PhD</i>	
Introduction .....	171
What are doubled-up legume systems? .....	172
Conclusions .....	179
Acknowledgments .....	179
References .....	179
Further reading .....	180
<b>CHAPTER 10 Ecosystem services in paddy rice systems</b> .....	181
<i>P. Chivenge, PhD, O. Angeles, PhD, B. Hadi, PhD, C. Acuin, PhD, M. Connor, PhD, A. Stuart, PhD, R. Puskur, PhD and S. Johnson-Beebout, PhD</i>	
Introduction .....	181
Rice production in a global context .....	181
What are paddy rice systems and how do they differ from upland agrosystems? .....	182
Trends in intensification and water use .....	185
Ecosystem services in lowland rice systems .....	185
Provisioning services .....	185
Regulating and maintenance services .....	188
Cultural services .....	192
Disservices of lowland rice ecosystems .....	195
Air quality and greenhouse gas emission .....	195
Human health: water-borne diseases .....	195
Food safety challenges .....	195
Conclusion .....	196
References .....	196
<b>CHAPTER 11 The role of ecosystem services in offsetting effects of climate change in sustainable food systems in the Zambezi Basin, Southern Africa ...</b>	203
<i>Chipo Plaxedes Mubaya, PhD and Mzime Regina Ndebele-Murisa, PhD</i>	
Introduction .....	203
The climate change problem .....	204
Climate change impacts on ecosystems .....	206
Conceptualization of ecosystem services and food systems .....	206

Ecosystem-based approaches to enhance food production systems .....	208
Case study of Omay Communal Lands, Zimbabwe.....	211
Ecosystem services in Omay .....	213
Improvement of ecosystem service benefits to the communities .....	215
Challenges limiting access to ecosystem services .....	216
Perceptions regarding historical climate trends.....	217
Toward a framework for ecosystem-based sustainable food systems under a changing climate in Southern Africa .....	222
References.....	223
Further reading.....	228
<b>CHAPTER 12 Accounting for the invisible value of trees on farms through valuation of ecosystem services ...</b>	<b>229</b>
<i>Brian Chiputwa, BSc, MSc, PhD, Hanna J. Ihli, Priscilla Wainaina and Anja Gassner</i>	
Introduction.....	229
Measuring, quantifying, and valuing ecosystem services.....	231
The importance of agroforestry systems.....	232
Total economic values of agroforestry systems.....	233
Economic valuation methods using the TEV approach .....	236
Direct market valuation approaches .....	236
Cost-based approaches.....	241
Revealed preference approaches.....	242
Stated preference approaches.....	243
Benefit transfer approach .....	245
Valuation of agroforestry ecosystem services under risk and uncertainty.....	246
Empirical example that combines different valuation techniques in agroforestry systems.....	248
Choice experiment.....	249
Experiment on risk preferences.....	250
Experiment on time preferences .....	252
Conclusions and future research.....	254
Acknowledgments.....	256
References.....	256
Further reading.....	260

<b>CHAPTER 13 Challenges in maximizing benefits from ecosystem services and transforming food systems</b> .....	<b>263</b>
<i>Leonard Rusinamhodzi, BSc, M.Phil, PhD</i>	
Introduction.....	263
Knowledge about ecosystems services.....	266
Quantification of ecosystems services.....	267
Transforming food systems to maximize ecosystem services.....	268
Conclusions.....	271
References.....	272
Index.....	275
