

MARKET ANALYSIS FOR REAL ESTATE

Rena Mourouzi-Sivitanidou

Edited by Petros Sivitanides

CONTENTS

<i>Acknowledgments</i>	<i>xxii</i>
PART A	
Introduction	1
1 Market analysis in perspective	3
Introduction	3
Book premise, focus, and objectives	4
Market analysis in perspective	5
Focus and contribution	5
General macroeconomic/metropolitan growth forces	6
Macroeconomic forces that drive the demand for and supply of specific property types	7
Location and project-specific factors	7
Market analysis components	8
Metropolitan growth analysis	9
Macro analysis of real estate markets	11
Micro (site-specific) analysis of development projects	12
Market studies and their emphasis	12
Residential	13
Retail	13
Office	13
Industrial	13
Market studies in general: evaluation criteria	14
Book structure and content	15
References and additional readings	17

2	Real estate economics	19
	Introduction	20
	Real estate demand	20
	Real estate demand concepts	20
	Demand sensitivity to price/rent changes: price elasticity of demand	20
	Impact of actual price changes versus expected price changes	22
	Exogenous determinants of real estate demand	22
	Measuring changes in real estate demand: absorption concepts	24
	The supply of real estate	26
	Real estate supply concepts	26
	The long-run aggregate supply: is it relevant?	26
	The short-run aggregate supply	27
	New construction	27
	The determination of market expectations	33
	Real estate price adjustments	34
	Price determination mechanism	34
	Long-run versus short-run changes	35
	The simple stock-flow model: an analytical tool	36
	Assessment of the simple stock-flow model	39
	Assessing demand-supply imbalances	40
	Demand-supply interactions: market inefficiencies	40
	Assessing the extent of disequilibrium: popular/simplistic measures	40
	Construction minus net absorption ($C-AB$)	41
	Is $C-AB$ a good indicator of market strength?	41
	Nominal vacancy rate (V)	43
	Advanced methodologies	44
	Nominal versus structural vacancy rate ($V-V^*$)	44
	Prevailing rent versus implicit equilibrium rent ($R-R^*$)	48
	Chapter summary	49
	Questions	50
	Demand	50
	Supply	50
	Price adjustments	50
	Questions for discussion	50
	References and additional readings	52

PART B

Metropolitan growth analysis 53

3	Metropolitan growth patterns	55
	Introduction	55
	Growth analysis in perspective	56
	Defining metropolitan growth	56
	Growth mechanisms and implications for real estate	58
	Demand-induced growth: causes and long-run consequences	59

Contents

Growth stimuli	59
Mechanism and long-run consequences	60
Real estate market impacts	62
Supply-induced growth: causes and long-run consequences	64
Growth stimuli	64
Mechanism and long-run consequences	64
Real estate market impacts	65
Education, technology, and metropolitan growth	65
Chapter summary	66
Questions	67
References and additional readings	67
4 Analyzing metropolitan economies	68
Introduction	68
Main analysis steps	69
Identification of the spatial unit of analysis	69
Analysis of basic growth indicators	69
Analysis of population and income trends	72
Analysis of sectoral employment, income, and industry structure trends	73
Analyzing employment and income growth patterns by industry	74
Analyzing absolute and relative employment shares	80
Synthesis: growth prospects	85
Selected sources of information for historical data and forecasts	86
Chapter summary	86
Questions	86
Project #1: Analyzing metropolitan growth patterns	87
Data to be provided by instructor	87
Main tasks	87
Introduction	87
Analyzing metropolitan growth patterns	87
Growth prospects and real estate markets	88
References and additional readings	88
Appendix 4A: About indices	88
PART C	
Analyzing residential real estate markets	95
5 Residential real estate markets	97
Introduction	97
Overview of residential market analysis	98
Basic housing market economics	101
Housing demand: analysis elements	102
Demand for a particular housing type	102
Demand for tenure type	102
Demand for quality/amenity levels	103

Contents

	Demand for particular location characteristics	103
	Households and demographic structures	103
	Income, prices, and affordability	106
	Mortgage rates and inflation	110
	Expectations	112
	New housing supply	112
	New residential construction	113
	The supply of resale homes	114
	Chapter summary	115
	Questions	116
	References and additional readings	116
6	Macroeconomic analysis of residential real estate markets: accounting techniques	118
	Introduction	118
	Macroeconomic analysis framework	119
	Market area definition	119
	Define the primary market area by drawing a curve representing equal commuting time from the site	119
	Identify major employment nodes within the primary market area	121
	Establish the competitive market area	121
	Refine the definition of the competitive market area	121
	Adjust boundaries to coincide with census tract boundaries	121
	Time frame of the analysis	122
	Assessing residential market strength	122
	Accounting techniques: the aggregate approach	123
	Accounting techniques: the disaggregate approach	128
	Chapter summary	135
	Questions	135
	Project #2: Estimating effective residential demand using the accounting approach	136
	The case	136
	Development scenarios and price data	136
	Mortgage requirements and affordability measures in 2023	136
	Target demographic groups and preferences	136
	Market area data	137
	Questions	137
	What to turn in	138
	References and additional readings	138
7	Macroeconomic analysis of residential real estate markets: the basics of the econometric approach	139
	Introduction	139
	The basics of regression analysis	140
	Evaluating regression models	145
	Prediction	145
	Applications of regression models in market analysis	146
	Macro analysis of real estate markets	146

Contents

Micro analysis of real estate projects	146
A numerical example of a simple linear regression	146
Multiple regression models	150
Chapter summary	150
Questions	151
References and additional readings	151
Appendix 7A: Further information on linear regression models	152
8 Macroeconomic analysis of residential real estate markets: applying the econometric approach	155
Introduction	155
Applying the econometric approach to the Dallas apartment market	156
Step 1: Collect data on apartment demand, supply, rents, and their drivers	157
Step 2: Set up/define a behavioral model	159
Specifying the statistical equations	159
Step 3: Estimate the model	164
Rent equation	164
Permit equation	165
Step 4: Develop forecasts and perform sensitivity analysis	167
Chapter summary	174
Questions	175
Project #3: Forecasting the Los Angeles apartment market	176
The data	176
Data analysis	178
References and additional readings	179
Appendix 8A: Calculating the speed of rental adjustment	179
9 Analyzing residential projects: a micro perspective	181
Introduction	182
Qualitative analysis of residential projects	184
Site and location analysis	184
The site and its immediate environment	184
Neighborhood and community attributes	186
Access and linkages	187
Analysis of local market conditions	188
Data sources	188
Consumer targeting and refinement of product design	189
Quantitative analysis of residential projects: estimating project rent and absorption rate	190
Analyzing the competition: the competitive differentials technique	191
Analysis steps	191
Numerical example	192
Critique	198
Hedonic valuation techniques	199
Analysis steps	199
Applications	203

Contents

Estimating project price or rent given its amenity package	203
Determining and evaluating optimal project design	204
Numerical example	205
Critique of the hedonic valuation technique	207
Project absorption and gross revenue analysis	207
Numerical example of project absorption analysis	210
Econometric estimation of project absorption	213
Chapter summary	215
Questions	215
Project #4: On hedonic price models	216
Analysis tasks/questions	216
References and additional readings	218
Appendix 9A: Determining optimal development density	218
10 Analysis of residential real estate markets: an example	221
Introduction	222
Residential development: an example	222
The project and relevant market and financial data	222
Time of entry	222
Residential acreage and zoning	222
Target markets	223
Target group demographics (1998)	223
Distribution of households across income groups (1998)	223
Residential product design	223
Hedonic price analysis	223
Non-land development costs	224
The design type choice problem	225
Residential finance (permanent loan)	226
Residential preferences	226
Age Group 1	226
Age Group 2	226
Residential market demand, competing supply, and prices	227
Effective demand	227
Competing supply	227
Real market price index	227
Analysis	228
Determining optimal design and densities	228
Selecting the most profitable design type for each of the two target groups	228
Determining the optimal density for each target group	229
Determining how many units of each design type to include in the project	233
Estimating project absorption and revenue schedules	235
Estimate the nominal market price index	236
Determine the schedule of nominal house prices for the two design types to be included in the project	236
Forecast effective housing market demand	237

Estimate project absorption schedule	239
Estimate project revenue schedule	239
Evaluating residential market studies	239
Macroeconomic analysis of residential markets	239
Micro, site-specific analysis of residential development projects	240
PART D	
Analyzing the market for retail space	241
11 Retail markets and retail market studies	243
Introduction	243
Idiosyncrasies of the market for retail space	244
Idiosyncratic macroeconomic aspects	244
Idiosyncratic microeconomic aspects	244
Retail market fundamentals	245
The demand for retail space	245
Components of retail space demand	245
Purchasing power	247
Spending patterns	249
The supply of retail space	253
Retail market analysis objectives	256
Overview: the three phases of a retail market study	256
Phase I: Analyzing entry	256
Phase II: Location analysis/evaluation	257
Phase III: Project evaluation	257
Chapter summary	259
Questions	260
References and additional readings	261
12 Analyzing the market for retail space	262
Introduction	263
Phase I: Assessing unrealized sales potential	263
Definition/types of retail markets	264
Analysis techniques	264
Method 1: Estimating unrealized sales potential through accounting techniques	265
Step 1: Define the spatial unit of analysis	265
Step 2: Estimate the potential volume of sales, S^E	265
Step 3: Estimate the sales volume supported by existing establishments, S	265
Step 4: Estimate the market's unrealized sales potential	266
Example of the application of the accounting technique	266
Critique of the accounting technique	267
Method 2: Estimating unrealized sales potential through econometric techniques	268
Step 1: Define the spatial unit of analysis	268
Step 2: Model and predict sales/capita	269
Step 3: Estimate the sales volume supported by existing establishments, S	269

Contents

Step 4: Estimate the market's unrealized sales potential	269
Example of the application of the econometric approach	269
Critique of the econometric approach	270
Strategic implications of the analysis of market potential	270
Phase II: The spatial behavior of consumers	271
Location selection	274
Spatial demand analysis	275
Consumer	275
Macro-access	275
Micro-access	276
Micro-environment	276
Supply analysis	276
Preferred location traits across center typologies	276
Phase III: Refining and evaluating the retail development scenario	277
Stage 1: Refining the development scenario	277
Stage 2: Retail trade area definition	277
Non-stylized, multiple-criteria methodologies for defining trade areas	280
Stylized methodologies for defining trade areas	281
Stage 3: Competition analysis	283
Identify and collect data on competing facilities	283
Evaluate and rate the planned development against competing developments using the competitive differentials technique	284
Analyze the links between development traits and performance	284
Revise the development idea	285
Stage 4: Shopping pattern analysis	285
Stage 5: Evaluating the development plan	285
Step 1: Estimating the development's likely capture rate	287
Step 2: Estimating sales potential by line of trade	292
Step 3: Estimating supportable square footage by line of trade	293
Step 4: Estimating achievable retail space rents	294
Step 5: Assessing the development scenario	298
Chapter summary	298
Questions	299
References and additional readings	301
Appendix 12A: Retail data sources	301
Appendix 12B: Further elaboration on the probabilistic approach used by DiPasquale and Wheaton	303
13 Analyzing the market for retail space: synthesis and market studies	304
Introduction	305
Emphasis of retail market studies	305
Regional and super-regional centers	305
Community centers	305
Neighborhood centers	305
Strip centers	306

Contents

Discount and warehouse stores	306
Off-price centers	306
Outlet centers	306
Specialty centers	306
Evaluating retail market studies	306
Broader evaluation criteria	306
Common flaws of retail market studies	306
Improper definition of the market/trade area	307
Inaccurate data on spendable income and retail sales	307
Inappropriate assessment of supportable retail activity	307
Naive assumptions regarding future changes	307
Misinterpretation of “comparables”	307
Poor analysis of the risks pertaining to store and tenant failure	307
Use of very broad data sources	308
Retail development: a simple example	308
Project and market data	308
Time of entry	308
Retail GLA	308
Tenant clusters and sources of demand	308
Tenant data	309
Residential-based demand and trade area households	309
Job-based and visitor-based demand	310
Retail rent index	310
Analysis	310
Questions	312
References and additional readings	314

PART E

Office market analysis 315

14 The market for office space	317
Introduction	317
Office market idiosyncrasies and determinants of project success	318
Office space demand and prospects	319
Office-using sectors	320
On net absorption and its determinants	320
The supply of office space	322
Income-related factors	322
Cost-related factors and availability of capital	323
Overview of office market analysis	324
Analysis of office project viability from the market perspective	326
Chapter summary	326
Questions	326
References and additional readings	327

15	Office market analysis: a macro perspective	329
	Introduction	330
	Analyzing office markets: a macro perspective	330
	What market variables should be analyzed?	331
	Office space demand	331
	New office supply	331
	Office market demand-supply imbalances	331
	Numerical example	332
	Assessing office market strength: overview of office market gap estimation	335
	Calculating new office space requirements, $DS(t)$	336
	Estimating expected net absorption of office space, $AB(t)$	336
	Simplistic view	336
	“Informed” view	336
	Simple accounting techniques for forecasting office-using employment and office space demand	339
	Aggregate approaches: using office employment growth	339
	Disaggregate approaches: using industry-occupation matrices	339
	Example	340
	Office supply analysis using accounting approaches	343
	Vacant stock	345
	Completions	345
	Critique	345
	Econometric forecasting of office markets	346
	Forecasting office space absorption, new construction, vacancies, and rents	346
	Alternative rental adjustment models	347
	Alternative 1: Traditional model with variable structural vacancy rate	350
	Alternative 2: The equilibrium or desired rent model	350
	Submarket analysis	351
	Types of office nodes	352
	Downtown district	352
	Uptown district	352
	Office parks	352
	Special nodes	352
	Shopping center office nodes	352
	How to analyze office submarkets	352
	Chapter summary	354
	Questions	355
	Project #5: Econometric forecasting of office markets	355
	The case	355
	The questions	356
	The report	356
	The data	356
	References and additional readings	358
16	Micro analysis of office markets	359
	Introduction	359

Contents

Analyzing office locations	360
Productive or firm amenities	360
Worker/residential amenities	362
Prestige and visibility	362
Location constraints	362
But, do office rents fully reflect location amenity differentials?	362
Analyzing office projects: estimating achievable rents and absorption schedules	364
Collection of data for competing office properties	365
Identify comparable office properties	365
Collect information on the identified comparables	366
Data analysis	368
Using the competitive differentials technique to assess project strength and achievable rental rates	368
Critique	370
Using hedonic methodologies to estimate achievable office lease rates	370
Variables included in hedonic office rent models	370
Usefulness of hedonic rent analysis	372
Critique	372
Developing office-project absorption and revenue schedules	373
Chapter summary	376
Questions	377
References and additional readings	378
17 Office market analysis: synthesis and market studies	380
Introduction	380
Example: multi-tenant office development	381
The project	381
Time of entry	381
Structure typology	381
Analysis of hedonic lease rates, 1996	381
Market information	382
Analysis	382
Evaluating office market studies	384
Macro analysis of office markets	384
Micro, site-, and project-specific analysis of office projects	384
Project #6: Evaluating an office development scenario	388
What to turn in	388
Micro market data	388
Site and structure attributes	388
Office lease rates: hedonic analysis results	388
Macro market conditions	388
Forecast of metropolitan office market fundamentals	388
Space requirements per worker	390
Office market absorption equation	390
References and additional readings	390

PART F	
Industrial market analysis	391
18 Industrial space market	393
Introduction	394
Industrial market idiosyncrasies	395
Functional heterogeneity	395
Large non-speculative component	395
Industrial cycles parallel business, as opposed to real estate cycles	396
The demand for industrial space	396
Growth in industrial output or employment	396
Shifts in the real after-tax cost of corporate capital	397
Replacement demand	397
Square feet per employee	398
The supply of industrial space	400
Industrial market analysis: an overview	401
Macroeconomic analysis of industrial markets	401
Accounting approaches	401
Econometric approaches	402
Microeconomic site-specific analysis of industrial projects	402
Macroeconomic analysis of industrial markets	402
Estimating the industrial demand-supply gap through accounting techniques	402
Accounting techniques for forecasting industrial space demand	403
Method 1: Demand analysis for general-purpose industrial space	403
Method 2: Best-fit industry analysis	404
Econometric modeling of the industrial market	409
Modeling investment in non-speculative industrial buildings	410
Modeling the speculative industrial market	411
Site-specific analysis of industrial projects	413
Step 1: Evaluation of site attributes	413
Site features	413
Site access and linkages	414
Traditional manufacturing (production) space	414
Warehouse and distribution space	414
Research and development space	415
Community constraints	415
Step 2: Identification of types of tenants most likely to be attracted to the site	416
Step 3: Analysis of the competition	416
Step 4: Estimation of project absorption schedule and achievable rents or land prices	417
On industrial market studies: evaluation criteria	419
Macro, non-site-specific analysis	419
Site-specific analysis of development projects	420
Chapter summary	420
Questions	421
References and additional readings	422

PART G	
Data sources	425
19 Data sources for real estate market analysis	427
Introduction	427
Sources for real estate market data	427
Sources for economic and demographic data	431
References	432
<i>Index</i>	<i>433</i>
