Introduction and Preface

page xi

1 Probability	1
1.1 Probabilities and Events	1
1.2 Conditional Probability	5
1.3 Random Variables and Expected Values	9
1.4 Covariance and Correlation	14
1.5 Conditional Expectation	16
1.6 Exercises	17
2 Normal Random Variables	22
2.1 Continuous Random Variables	22
2.2 Normal Random Variables	22
2.3 Properties of Normal Random Variables	26
2.4 The Central Limit Theorem	29
2.5 Exercises	31
3 Brownian Motion and Geometric Brownian Motion	34
3.1 Brownian Motion	34
3.2 Brownian Motion as a Limit of Simpler Models	35
3.3 Geometric Brownian Motion	38
3.3.1 Geometric Brownian Motion as a Limit of Simpler Models	40
3.4 *The Maximum Variable	40
3.5 The Cameron-Martin Theorem	45
3.6 Exercises	46
4 Interest Rates and Present Value Analysis	48
4.1 Interest Rates	48
4.2 Present Value Analysis	52
4.3 Rate of Return	62
4.4 Continuously Varying Interest Rates	65
4.5 Exercises	67

5 Pricing Contracts via Arbitrage	73
5.1 An Example in Options Pricing	73
5.2 Other Examples of Pricing via Arbitrage	77
5.3 Exercises	86
6 The Arbitrage Theorem	92
6.1 The Arbitrage Theorem	92
6.2 The Multiperiod Binomial Model	96
6.3 Proof of the Arbitrage Theorem	98
6.4 Exercises	102
7 The Black–Scholes Formula	106
7.1 Introduction	106
7.2 The Black–Scholes Formula	106
7.3 Properties of the Black–Scholes Option Cost	110
7.4 The Delta Hedging Arbitrage Strategy	113
7.5 Some Derivations	118
7.5.1 The Black–Scholes Formula	119
7.5.2 The Partial Derivatives	121
7.6 European Put Options	126
7.7 Exercises	127
8 Additional Results on Options	131
8.1 Introduction	131
8.2 Call Options on Dividend-Paying Securities	131
8.2.1 The Dividend for Each Share of the Security Is Paid Continuously in Time at a Rate Equal to a Fixed Fraction f of the Price of the Security	132
8.2.2 For Each Share Owned, a Single Payment of $fS(t_d)$ Is Made at Time t_d	133
8.2.3 For Each Share Owned, a Fixed Amount D Is to Be Paid at Time t_d	134
8.3 Pricing American Put Options	136
8.4 Adding Jumps to Geometric Brownian Motion	142
8.4.1 When the Jump Distribution Is Lognormal	144
8.4.2 When the Jump Distribution Is General	146
8.5 Estimating the Volatility Parameter	148
8.5.1 Estimating a Population Mean and Variance	149
8.5.2 The Standard Estimator of Volatility	150

8.5.3	Using Opening and Closing Data	152
8.5.4	Using Opening, Closing, and High–Low Data	153
8.6	Some Comments	155
8.6.1	When the Option Cost Differs from the Black–Scholes Formula	155
8.6.2	When the Interest Rate Changes	156
8.6.3	Final Comments	156
8.7	Appendix	158
8.8	Exercises	159
9	Valuing by Expected Utility	165
9.1	Limitations of Arbitrage Pricing	165
9.2	Valuing Investments by Expected Utility	166
9.3	The Portfolio Selection Problem	174
9.3.1	Estimating Covariances	184
9.4	Value at Risk and Conditional Value at Risk	184
9.5	The Capital Assets Pricing Model	187
9.6	Rates of Return: Single-Period and Geometric Brownian Motion	188
9.7	Exercises	190
10	Stochastic Order Relations	193
10.1	First-Order Stochastic Dominance	193
10.2	Using Coupling to Show Stochastic Dominance	196
10.3	Likelihood Ratio Ordering	198
10.4	A Single-Period Investment Problem	199
10.5	Second-Order Dominance	203
10.5.1	Normal Random Variables	204
10.5.2	More on Second-Order Dominance	207
10.6	Exercises	210
11	Optimization Models	212
11.1	Introduction	212
11.2	A Deterministic Optimization Model	212
11.2.1	A General Solution Technique Based on Dynamic Programming	213
11.2.2	A Solution Technique for Concave Return Functions	215
11.2.3	The Knapsack Problem	219
11.3	Probabilistic Optimization Problems	221

11.3.1	A Gambling Model with Unknown Win Probabilities	221
11.3.2	An Investment Allocation Model	222
11.4	Exercises	225
12	Stochastic Dynamic Programming	228
12.1	The Stochastic Dynamic Programming Problem	228
12.2	Infinite Time Models	234
12.3	Optimal Stopping Problems	239
12.4	Exercises	244
13	Exotic Options	247
13.1	Introduction	247
13.2	Barrier Options	247
13.3	Asian and Lookback Options	248
13.4	Monte Carlo Simulation	249
13.5	Pricing Exotic Options by Simulation	250
13.6	More Efficient Simulation Estimators	252
13.6.1	Control and Antithetic Variables in the Simulation of Asian and Lookback Option Valuations	253
13.6.2	Combining Conditional Expectation and Importance Sampling in the Simulation of Barrier Option Valuations	257
13.7	Options with Nonlinear Payoffs	258
13.8	Pricing Approximations via Multiperiod Binomial Models	259
13.9	Continuous Time Approximations of Barrier and Lookback Options	261
13.10	Exercises	262
14	Beyond Geometric Brownian Motion Models	265
14.1	Introduction	265
14.2	Crude Oil Data	266
14.3	Models for the Crude Oil Data	272
14.4	Final Comments	274
15	Autoregressive Models and Mean Reversion	285
15.1	The Autoregressive Model	285
15.2	Valuing Options by Their Expected Return	286
15.3	Mean Reversion	289
15.4	Exercises	291
