Content

Introduction xv

Section 1 Essential concepts and skills

Chapter 1 An introduction to Python programming 3
Chapter 2 How to write your first programs 27
Chapter 3 How to code control statements 65
Chapter 4 How to define and use functions and modules 103
Chapter 5 How to test and debug a program 141
Chapter 6 How to work with lists and tuples 163
Chapter 7 How to work with file I/O 195
Chapter 8 How to handle exceptions 225

Section 2 Other concepts and skills

Chapter 9 How to work with numbers 249
Chapter 10 How to work with strings 269
Chapter 11 How to work with dates and times 297
Chapter 12 How to work with dictionaries 321
Chapter 13 How to work with recursion and algorithms 347

Section 3 Object-oriented programming

Chapter 14 How to define and use your own classes 365
Chapter 15 How to work with inheritance 405
Chapter 16 How to design an object-oriented program 433

Section 4 Database and GUI programming

Chapter 17 How to work with a database 461
Chapter 18 How to build a GUI program 503

Reference aids

Appendix A How to set up Windows for this book 523
Appendix B How to set up Mac OS X for this book 533
Index 545

Expanded contents

Section 1 Essential concepts and skills

Chapter 1 An introduction to Python programming

Introduction to Python 4
Why Python works so well as your first programming language 4
Three types of Python applications 6
The source code for a console application 8
How Python compiles and runs source code 10
How disk storage and main memory work together 12

How to use IDLE to develop programs 14
How to use the interactive shell 14
How to work with source files 16
How to compile and run a program 18
How to fix syntax and runtime errors 20

Chapter 2 How to write your first programs

Basic coding skills 28
How to code statements 28
How to code comments 30
How to use functions 32

How to work with data types and variables 34
How to assign values to variables 34
How to name variables 36

How to work with numeric data 38
How to code arithmetic expressions 38
How to use arithmetic expressions in assignment statements 40
How to use the interactive shell for testing numeric operations 42

How to work with string data 44
How to assign strings to variables 44
How to join strings 44
How to include special characters in strings 46
How to use the interactive shell for testing string operations 48

How to use five of the Python functions 50
How to use the print() function 50
How to use the input() function 52
How to use the int(), float(), and round() functions 54
How to chain functions 54

Two illustrative programs 56
The Miles Per Gallon program 56
The Test Scores program 58

Chapter 3 How to code control statements

How to code Boolean expressions 66
How to use the relational operators 66
How to use the logical operators 68
How to compare strings 70

How to code the selection structure 72
How to code if statements 72
More examples of if statements 74
How to code nested if statements 76
How to use pseudocode to plan if statements 78

Two illustrative programs 80
The Miles Per Gallon program 80
The Invoice program 82

How to use the iteration structure 84
How to code while statements 84
How to code for statements 86
How to code break and continue statements 88
More examples of loops 90
How to use pseudocode to plan a program 92

Two illustrative programs 94
The Test Scores program 94
The Future Value program 96

Chapter 4 How to define and use functions and modules

How to define and use functions 104
How to define and call a function 104
How to define and call a main() function 106
The Future Value program with functions 108

More skills for defining and using functions 110
How to use default values for arguments 110
How to use named arguments 110
When and how to use local and global variables 112

How to create and use modules 114
How to create a module 114
How to document a module 116
How to import a module 118
The Convert Temperatures program 120

How to use standard modules 122
How to use the random module 122
The Guess the Number game 124

How to plan the functions of a program 126
How to use a hierarchy chart 126
The hierarchy chart for the Pig Dice game 128
The Pig Dice game with global variables 130
The Pig Dice game with local variables 134

Chapter 5 How to test and debug a program

An introduction to testing and debugging 142
The three types of errors that can occur 142
Common Python errors 144

Four techniques for testing and debugging 146
How to plan the test runs 146
A simple way to trace code execution 148
How to use top-down coding and testing to simplify debugging 150
How to use the IDLE shell to test functions 152

How to use the IDLE debugger 154
How to set and remove breakpoints 154
How to step through the code 156
How to view the stack 158

Chapter 6 How to work with lists and tuples

Basic skills for working with lists 164
How to create a list 164
How to get and set items 164
How to add and remove items 166
How to process the items in a list 168
How lists are passed to functions 170
The Movie List program 172

How to work with a list of lists 176
How to create a list of lists 176
How to process the items in a list of lists 176
The Movie List 2D program 178

More skills for working with lists 182
How to count, reverse, and sort the items in a list 182
How to use other functions with lists 184
How to copy, slice, and concatenate lists 186

How to work with tuples 188
How to create a tuple 188
How to get items from a tuple 188
The Number Crunching program 190

Chapter 7 How to work with file I/O

An introduction to file I/O 196
How file I/O works 196
How to open and close a file 198

How to use text files 200
How to write a text file 200
How to read a text file 202
How to work with a list in a text file 204
The Movie List 1.0 program 206

How to use CSV files 210
How to write a CSV file 210
How to read a CSV file 212
How to modify the CSV format 212
The Movie List 2.0 program 214

How to use binary files 218
How to work with a binary file 218
The Movie List 3.0 program 220

Chapter 8 How to handle exceptions

How to handle a single exception 226
How exceptions work 226
How to use a try statement to handle one type of exception 228
The Total Calculator program 230

How to handle multiple exceptions 232
How to use a try statement to handle multiple exceptions 232
How to get the information from an exception object 234
The Movie List 2.0 program 236

Two more skills 240
How to use a finally clause 240
How to raise an exception 242

Section 2 Other concepts and skills

Chapter 9 How to work with numbers

Basic skills for working with numbers 250
How floating-point numbers work 250
How to use the math module 252

How to format numbers 254
How to use the format() method of a string 254
How to use the locale module 256
How to fix rounding errors 258

How to work with decimal numbers 260
How to use the decimal module 260
The Invoice program with decimal numbers 262
The Future Value program with decimal numbers 264

Chapter 10 How to work with strings

Basic skills for working with strings 270
Unicode, indexes, slicing, duplicating, and multiline strings 270
How to search a string 272
How to loop through the characters in a string 272
How to use basic string methods 274
How to find and replace parts of a string 276
The Create Account program 278

How to split and join strings 280
How to split a string into a list of strings 280
How to join strings 282
The Movie List 2D program 284
The Word Counter program 286

The Hangman game 288
The user interface 288
The hierarchy chart 288
The wordlist module 290
The hangman module 290

Chapter 11 How to work with dates and times

How to get started with dates and times 298
How to create date, time, and datetime objects 298
How to create datetime objects by parsing strings 300
How to format dates and times 302
How to work with spans of time 304
The Invoice Due Date program 306
The Timer program 308

More skills for working with dates and times 310
How to get date and time parts 310
How to compare date/time objects 312
The Hotel Reservation program 314

Chapter 12 How to work with dictionaries

How to get started with dictionaries 322
How to create a dictionary 322
How to get, set, and add items 324
How to delete items 326
How to loop through keys and values 328
How to convert between dictionaries and lists 330
The Country Code program 332
The Word Counter program 336

More skills for working with dictionaries 338
How to use dictionaries with complex objects as values 338
The Book Catalog program 340

Chapter 13 How to work with recursion and algorithms

An introduction to recursion 348
How recursion works in Python 348
How to use recursion to add a range of numbers 350

Some common recursive algorithms 352
How to compute the factorial of a number 352
How to compute a Fibonacci series 354
An algorithm for solving the Towers of Hanoi puzzle 356
The code for solving the Towers of Hanoi puzzle 358

Section 3 Object-oriented programming

Chapter 14 How to define and use your own classes

An introduction to classes and objects 366
Two UML diagrams for the Product class 366
Code that defines a Product class 368
Code that uses a Product class 368
How to create and use objects 370

How to define a class 372
How to code a constructor and attributes 372
How to code methods 374
The Product Viewer 1.0 program 376

How work with object composition 380
How object composition works 380
The Die and Dice classes 380
The Dice Roller 1.0 program 382

How to work with encapsulation 384
How object encapsulation works 384
How to hide attributes 386
How to access hidden attributes with methods 388
How to access hidden attributes with properties 390
The Die and Dice classes with encapsulation 392
The Product class with some encapsulation 394

The Pig Dice game 396
The console 396
The code 396

Chapter 15 How to work with inheritance

How to work with inheritance 406
How inheritance works 406
How to define a subclass 408
How polymorphism works 410
How to check an object's type 412

The Product Viewer 2.0 program 414
The objects module 414
The user interface and product_viewer module 416

How to override object methods 418
How to define a string representation for an object 418
How to define an iterator for an object 420
The Die and Dice classes 422

Two more skills for the road 424
How to work with custom exceptions 424
When to use inheritance 426

Chapter 16 How to design an object-oriented program

Techniques for object-oriented design 434
Five steps for designing an object-oriented program 434
How to identify the data attributes 436
How to subdivide the data attributes 438
How to identify the classes 440
How to identify the methods 442
How the three-tier architecture works 444

The Shopping Cart program 446
The business tier 446
The database tier 448
The presentation tier 450

Section 4 Database and GUI programming

Chapter 17 How to work with a database

An introduction to relational databases 462
How a database table is organized 462
How the tables in a database are related 464
How the columns in a table are defined 466

How to use the SQL statements for data manipulation 468
How to select data from a single table 468
How to select data from multiple tables 470
How to insert, update, and delete rows 472

How to use SQLite Manager to work with a database 474
How to connect to a SQLite database 474
How to execute SQL statements 476

How to use Python to work with a database 478
How to connect to a SQLite database 478
How to execute SELECT statements 480

How to get the rows in a result set 482
How to execute INSERT, UPDATE, and DELETE statements 484
How to test the database code 486
How to handle database exceptions 486

The Movie List program 488
The user interface 488
The business tier 488
The database tier 490
The presentation tier 494

Chapter 18 How to build a GUI program

How to create a GUI that handles an event 504
How to display a root window 504
How to work with frames and buttons 506
How to handle a button click event 508

More skills for working with components 510
How to work with labels and text entry fields 510
How to lay out components in a grid 512
How to code a class that defines a frame 514

The Future Value program 516
The business module 516
The ui module 516

Appendix A How to set up Windows for this book
How to install the source code for this book 524
How to install Python and IDLE 526
How to install Firefox and SQLite Manager 528
How to verify that the database is installed correctly 530

Appendix B How to set up Mac OS X for this book
How to install the source code for this book 534
How to install Python and IDLE 536
How to verify that Python and IDLE are working correctly 538
How to install Firefox and SQLite Manager 540
How to verify that the database is installed correctly 542
