

Dirk Inghels

Introduction to Modeling Sustainable Development in Business Processes

Theory and Case Studies

Springer

Contents

1	Sustainability Transition for Businesses	1
1	Emergence of Sustainable Development	2
1.1	Economic Growth from a Historical Perspective	2
1.2	World Population Growth from a Historical Perspective	5
1.3	Sustainable Development as an Answer to the Multiple Crises of Modern Society	7
1.4	Key Pillars of Sustainability	8
2	The Tragedy of the Commons	10
2.1	Ways to Counteract	11
3	Emergence of Sustainable Development in a Business Context	15
3.1	Sustainability in Business Processes	15
4	Towards Sustainable Supply Chain Management	19
4.1	Supply Chain Management	19
4.2	Sustainable Supply Chain Management	20
5	Modeling Sustainable Business Processes	22
6	Case Study: Green Waste Valorization	23
6.1	The Basic System and Its Notation	24
6.2	First Environmental Objective: Maximizing Composting Yield	26
6.3	Second Environmental Objective Function: Maximizing Waste to Energy	26
6.4	Third Environmental Objective Function: Minimizing the Environmental Impact	27
6.5	Fourth Environmental Objective Function: Minimizing the PM Emissions	27
6.6	Societal Impact	28
6.7	Economic Impact	28
6.8	Constraints	29

2	Single Objective Optimization	31
1	The Municipal Solid Waste Allocation Problem	31
2	Standard Form of the Mathematical LP Problem	33
2.1	Generic Form of a Linear Programming Problem	33
2.2	The MSW Allocation Problem Formulated as a Linear Programming Problem	34
3	Assumptions of Linear Programming	36
3.1	Proportionality	37
3.2	Additivity	37
3.3	Divisibility	37
3.4	Certainty	38
3.5	Data Availability	38
4	Determining the Optimal Solution	38
4.1	Graphical Method	38
4.2	Simplex Method	40
4.3	Algebraic Method	41
4.4	Using the MS Excel Solver	45
5	Special Cases	51
6	Optimizing Profit for the Green Waste Valorization Case	52
7	Mixed Integer Linear Programming (MILP)	55
7.1	Generic Form of a MILP Problem	55
7.2	The Adapted MSW Allocation Problem Formulated as a MILP	56
3	Multiple Objective Optimization	59
1	Introduction: Bi-objective Optimization – The Green Waste Valorization Case	59
2	The Difference Between a SOOP and a MOOP	62
3	The Standard Form of a MOOP	63
4	Two Approaches to Obtain One Single Solution in Multi-objective Optimization	64
5	The Preference-Based Procedure	65
6	The Ideal Procedure	67
6.1	Step 1- Determining the Pareto-optimal Front	67
6.2	Step 2- Selecting a Single Optimal Solution on the Pareto-optimal Front	74
7	The Augmented ϵ -Constraint Method	75
8	Other Solution Methods	79

- 4 Quantifying the Economic Impact** 81
 - 1 Quantification of Economic Impact in a Business
 - Context and Supply Chains 81
 - 2 Cost, Profit and Cash Flow 83
 - 2.1 Cost 83
 - 2.2 Profit 83
 - 2.3 Cash Flow 83
 - 2.4 Single-Payment Compound-Amount Factor 84
 - 2.5 Equal-Payment-Series Compound-Amount Factor 86
 - 3 Internalizing External Costs 88
- 5 Quantification of the Environmental Impact** 89
 - 1 Introduction 89
 - 1.1 The Generic Life Cycle of a Product 89
 - 1.2 The Purpose of Life Cycle Assessment 92
 - 2 Commonly Used Terminology 93
 - 3 The Four-Stage Approach of an LCA According to ISO 14040+44 94
 - 3.1 Goal and Scope Definition 95
 - 3.2 Life Cycle Inventory Analysis (LCI) 101
 - 3.3 Life Cycle Impact Assessment (LCIA) 102
 - 3.4 Interpretation 103
 - 4 LCA Applied to the Green Waste Valorization Case Study 103
 - 4.1 Goal and Scope 104
 - 4.2 Life Cycle Inventory 105
 - 4.3 Life Cycle Impact Assessment 106
 - 4.4 Interpretation 107
 - 5 LCA Used as an Input in MCDA 107
- 6 Quantifying the Social Impact** 109
 - 1 Introduction to the AHP 109
 - 1.1 Pairwise Comparison of Criteria and Alternatives 110
 - 1.2 Generalization 115
 - 2 Computing the Priority Vector 117
 - 2.1 The Eigenvector Method 117
 - 2.2 The Geometric Mean Method 119
 - 3 AHP Applied to the Social Impact of the Green Waste Valorization Case 120
 - 3.1 The Eigenvector Method 124
 - 3.2 The Geometric Mean Method 128
 - 4 The Approximation Method 129
 - 5 AHP Using Excel 131
 - 5.1 Calculation of the Priority Vectors Using the Geometric Mean Method 133
 - 5.2 Calculation of the Priority Vectors Using the Approximation Method 135

7	Systems Thinking and Introduction to System Dynamics Modeling	141
1	Systems Thinking: Challenging the Cartesian-Newtonian Paradigm	143
2	The Paradigm of Economic Growth	144
3	Introduction to System Dynamics Modeling	146
8	Causal Loop Diagrams	149
1	Causal Loop Diagram Notation	149
2	Practical Use of Causal Loop Diagrams	151
2.1	Avoid Spurious Correlations	151
2.2	Determining Loop Polarity	151
2.3	Depicting Important Delays in Causal Links	153
2.4	Variable Names in Causal Diagrams	153
9	Structure and Fundamental Modes of Behavior in Dynamic Systems	155
1	Basic Modes of Dynamic Behavior	155
1.1	Exponential Growth	155
1.2	Goal Seeking	158
1.3	Oscillation	161
2	Interaction of the Basic Modes	161
2.1	S-Shaped Growth	162
2.2	S-Shaped Growth with Overshoot	166
2.3	Overshoot and Collapse	166
2.4	Tragedy of the Commons	167
2.5	Other Modes of Behavior	168
10	Stocks and Flows and the Dynamics of Simple Structures	169
1	Introduction	169
2	Variables and Model Boundaries	171
3	Dynamics of Exponential Growth	172
4	Dynamics of Goal-Seeking Behavior	176
5	Dynamics of S-Shaped Growth	181
11	Delays	185
1	Introduction	185
2	Pipeline (Material) Delay	185
3	First-Order Material Delay	189
4	N-th Order Material Delay	198
5	Information Delays	199
6	Dynamics of Oscillating Behavior	202
7	Dynamics of Limits to Growth	206

- 12 Nonlinear Behavior** 215
 - 1 Table Function 215
 - 2 MIN and MAX 216
 - 3 IF...Then, Else 216
 - 4 Case Study: My Domestic Power Consumption 216
