1 Why statistics?	1
Part 1 Descriptive statistics	19
2 Some basics: Variability and measurement	21
3 Describing variables: Tables and diagrams	31
4 Describing variables numerically: Averages, variation and spread	46
5 Shapes of distributions of scores	62
6 Standard deviation and z-scores: Standard unit of measurement in statistics	75
7 Relationships between two or more variables: Diagrams and tables	90
8 Correlation coefficients: Pearson's correlation and Spearman's rho	102
9 Regression: Prediction with precision	122
Part 2 Significance testing	135
10 Samples from populations	137
11 Statistical significance for the correlation coefficient: A practical introduction to statistical inference	144
12 Standard error: Standard deviation of the means of samples	158
13 Related <i>t</i> -test: Comparing two samples of related/correlated/paired scores	166
14 Unrelated <i>t</i> -test: Comparing two samples of unrelated/uncorrelated/independent scores	180
15 What you need to write about your statistical analysis	197
16 Confidence intervals	204
17 Effect size in statistical analysis: Do my findings matter?	215
18 Chi-square: Differences between samples of frequency data	225
19 Probability	244
20 One-tailed versus two-tailed significance testing	250
21 Ranking tests: Nonparametric statistics	256
Part 3 Introduction to analysis of variance	271
22 Variance ratio test: <i>F</i> -ratio to compare two variances	273
23 Analysis of variance (ANOVA): One-way unrelated or uncorrelated ANOVA	282
24 ANOVA for correlated scores or repeated measures	300
25 Two-way or factorial ANOVA for unrelated/uncorrelated scores: Two studies for the price of one?	315
26 Multiple comparisons within ANOVA: <i>A priori</i> and <i>post hoc</i> tests	342
27 Mixed-design ANOVA: Related and unrelated variables together	353

28	Analysis of covariance (ANCOVA): Controlling for additional variables	370
29	Multivariate analysis of variance (MANOVA)	386
30	Discriminant (function) analysis – especially in MANOVA	402
31	Statistics and analysis of experiments	416
Part 4	More advanced correlational statistics	429
32	Partial correlation: Spurious correlation, third or confounding variables, suppressor variables	431
33	Factor analysis: Simplifying complex data	444
34	Multiple regression and multiple correlation	467
35	Path analysis	484
Part 5	Assorted advanced techniques	501
36	Meta-analysis: Combining and exploring statistical findings from previous research	503
37	Reliability in scales and measurement: Consistency and agreement	522
38	Influence of moderator variables on relationships between two variables	536
39	Statistical power analysis: Getting the sample size right	558
Part 6	Advanced qualitative or nominal techniques	581
40	Log-linear methods: Analysis of complex contingency tables	583
41	Multinomial logistic regression: Distinguishing between several different categories or groups	609
42	Binomial logistic regression	626
43	Data mining and big data	643
	<i>Appendices</i>	653
	<i>Glossary</i>	689
	<i>References</i>	697
	<i>Index</i>	704

Contents

<i>Guided tour</i>	xx
<i>Introduction</i>	xxv
<i>Acknowledgements</i>	xxvii
1 Why statistics?	1
Overview	1
1.1 Introduction	2
1.2 Research on learning statistics	3
1.3 Why is learning statistics difficult?	4
1.4 The importance of understanding research designs	6
1.5 Positive about statistics	7
1.6 What statistics can't do	9
1.7 Easing the way	10
1.8 What do I need to know to be an effective user of statistics?	12
1.9 A few words about SPSS	13
1.10 Quick guide to the book's procedures and statistical tests	14
Key points	16
Computer analysis: SPSS Analyze, Graphs and Transform drop-down menus	17

Part 1 Descriptive statistics 19

2 Some basics: Variability and measurement	21
Overview	21
2.1 Introduction	22
2.2 Variables and measurement	23
2.3 Major types of measurement	24
Key points	28
Computer analysis: Some basics of data entry using SPSS	29
3 Describing variables: Tables and diagrams	31
Overview	31
3.1 Introduction	32

3.2	Choosing tables and diagrams	33
3.3	Errors to avoid	41
	Key points	42
	Computer analysis: Tables, diagrams and recoding using SPSS	42
4	Describing variables numerically: Averages, variation and spread	46
	Overview	46
4.1	Introduction	47
4.2	Typical scores: mean, median and mode	48
4.3	Comparison of mean, median and mode	51
4.4	Spread of scores: range and interquartile range	51
4.5	Spread of scores: variance	55
	Key points	59
	Computer analysis: Descriptive statistics using SPSS	60
5	Shapes of distributions of scores	62
	Overview	62
5.1	Introduction	63
5.2	Histograms and frequency curves	63
5.3	Normal curve	64
5.4	Distorted curves	66
5.5	Other frequency curves	68
	Key points	72
	Computer analysis: Frequencies using SPSS	73
6	Standard deviation and z-scores: Standard unit of measurement in statistics	75
	Overview	75
6.1	Introduction	76
6.2	Theoretical background	76
6.3	Measuring the number of standard deviations – the z-score	80
6.4	Use of z-scores	82
6.5	Standard normal distribution	83
6.6	Important feature of z-scores	86
	Key points	87
	Computer analysis: Standard deviation and z-scores using SPSS	88
7	Relationships between two or more variables: Diagrams and tables	90
	Overview	90
7.1	Introduction	91
7.2	Principles of diagrammatic and tabular presentation	92
7.3	Type A: both variables numerical scores	93
7.4	Type B: both variables nominal categories	95

7.5	Type C: one variable nominal categories, the other numerical scores	97
	Key points	99
	Computer analysis: Crosstabulation and compound bar charts using SPSS	99
8	Correlation coefficients: Pearson's correlation and Spearman's rho	102
	Overview	102
8.1	Introduction	103
8.2	Principles of the correlation coefficient	104
8.3	Some rules to check out	111
8.4	Coefficient of determination	112
8.5	Significance testing	113
8.6	Spearman's rho – another correlation coefficient	113
8.7	Example from the literature	116
	Key points	117
	Computer analysis: Correlation coefficients using SPSS	118
	Computer analysis: Scattergram using SPSS	120
9	Regression: Prediction with precision	122
	Overview	122
9.1	Introduction	123
9.2	Theoretical background and regression equations	125
9.3	Confidence intervals and standard error: how accurate are the predicted score and the regression equations?	130
	Key points	132
	Computer analysis: Simple regression using SPSS	133

Part 2 Significance testing 135

10	Samples from populations	137
	Overview	137
10.1	Introduction	138
10.2	Theoretical considerations	138
10.3	Characteristics of random samples	140
10.4	Confidence intervals	141
	Key points	142
	Computer analysis: Selecting a random sample using SPSS	142
11	Statistical significance for the correlation coefficient: A practical introduction to statistical inference	144
	Overview	144

11.1	Introduction	145
11.2	Theoretical considerations	145
11.3	Back to the real world: null hypothesis	147
11.4	Pearson's correlation coefficient again	149
11.5	Spearman's rho correlation coefficient	153
	Key points	155
	Computer analysis: Correlation coefficients using SPSS	156
12	Standard error: Standard deviation of the means of samples	158
	Overview	158
12.1	Introduction	159
12.2	Theoretical considerations	159
12.3	Estimated standard deviation and standard error	161
	Key points	163
	Computer analysis: Standard error using SPSS	164
13	Related <i>t</i> -test: Comparing two samples of related/correlated/paired scores	166
	Overview	166
13.1	Introduction	167
13.2	Dependent and independent variables	169
13.3	Some basic revision	169
13.4	Theoretical considerations underlying the computer analysis	170
13.5	Cautionary note	175
	Key points	177
	Computer analysis: Related/correlated/paired <i>t</i> -test using SPSS	178
14	Unrelated <i>t</i> -test: Comparing two samples of unrelated/uncorrelated/independent scores	180
	Overview	180
14.1	Introduction	181
14.2	Theoretical considerations	182
14.3	Standard deviation and standard error	186
14.4	Cautionary note	192
	Key points	193
	Computer analysis: Unrelated/uncorrelated/independent <i>t</i> -test using SPSS	194
15	What you need to write about your statistical analysis	197
	Overview	197
15.1	Introduction	198
15.2	Reporting statistical significance	199
15.3	Shortened forms	199
15.4	APA (American Psychological Association) style	200
	Key points	203

16	Confidence intervals	204
	Overview	204
16.1	Introduction	205
16.2	Relationship between significance and confidence intervals	208
16.3	Regression	211
16.4	Writing up a confidence interval using APA style	213
16.5	Other confidence intervals	213
	Key points	214
	Computer analysis: Examples of SPSS output containing confidence intervals	214
17	Effect size in statistical analysis: Do my findings matter?	215
	Overview	215
17.1	Introduction	216
17.2	Statistical significance and effect size	216
17.3	Size of the effect in studies	217
17.4	Approximation for nonparametric tests	219
17.5	Analysis of variance (ANOVA)	219
17.6	Writing up effect sizes using APA style	221
17.7	Have I got a large, medium or small effect size?	221
17.8	Method and statistical efficiency	222
	Key points	224
18	Chi-square: Differences between samples of frequency data	225
	Overview	225
18.1	Introduction	226
18.2	Theoretical issues	227
18.3	Partitioning chi-square	233
18.4	Important warnings	234
18.5	Alternatives to chi-square	235
18.6	Chi-square and known populations	237
18.7	Chi-square for related samples – the McNemar test	239
18.8	Example from the literature	239
	Key points	241
	Computer analysis: Chi-square using SPSS	241
	Recommended further reading	243
19	Probability	244
	Overview	244
19.1	Introduction	245
19.2	Principles of probability	245
19.3	Implications	247
	Key points	249

20	One-tailed versus two-tailed significance testing	250
	Overview	250
20.1	Introduction	251
20.2	Theoretical considerations	251
20.3	Further requirements	253
	Key points	254
	Computer analysis: One- and two-tailed statistical significance using SPSS	255
21	Ranking tests: Nonparametric statistics	256
	Overview	256
21.1	Introduction	257
21.2	Theoretical considerations	257
21.3	Nonparametric statistical tests	259
21.4	Three or more groups of scores	267
	Key points	268
	Computer analysis: Two-group ranking tests using SPSS	268
	Recommended further reading	270

Part 3 Introduction to analysis of variance 271

22	Variance ratio test: <i>F</i> -ratio to compare two variances	273
	Overview	273
22.1	Introduction	274
22.2	Theoretical issues and application	275
	Key points	279
	Computer analysis: <i>F</i> -ratio test using SPSS	280
23	Analysis of variance (ANOVA): One-way unrelated or uncorrelated ANOVA	282
	Overview	282
23.1	Introduction	283
23.2	Some revision and some new material	283
23.3	Theoretical considerations	284
23.4	Degrees of freedom	288
23.5	Analysis of variance summary table	294
	Key points	296
	Computer analysis: Unrelated one-way analysis of variance using SPSS	297
24	ANOVA for correlated scores or repeated measures	300
	Overview	300
24.1	Introduction	301

24.2	Theoretical considerations underlying the computer analysis	303
24.3	Examples	304
	Key points	312
	Computer analysis: Related analysis of variance using SPSS	313
25	Two-way or factorial ANOVA for unrelated/uncorrelated scores: Two studies for the price of one?	315
	Overview	315
25.1	Introduction	316
25.2	Theoretical considerations	317
25.3	Steps in the analysis	318
25.4	More on interactions	331
25.5	Three or more independent variables	334
	Key points	338
	Computer analysis: Unrelated two-way analysis of variance using SPSS	339
26	Multiple comparisons within ANOVA: <i>A priori</i> and <i>post hoc</i> tests	342
	Overview	342
26.1	Introduction	343
26.2	Planned (<i>a priori</i>) versus unplanned (<i>post hoc</i>) comparisons	344
26.3	Methods of multiple comparisons testing	345
26.4	Multiple comparisons for multifactorial ANOVA	345
26.5	Contrasts	346
26.6	Trends	348
	Key points	349
	Computer analysis: Multiple comparison tests using SPSS	350
	Recommended further reading	352
27	Mixed-design ANOVA: Related and unrelated variables together	353
	Overview	353
27.1	Introduction	354
27.2	Mixed designs and repeated measures	354
	Key points	367
	Computer analysis: Mixed design analysis of variance using SPSS	367
	Recommended further reading	369
28	Analysis of covariance (ANCOVA): Controlling for additional variables	370
	Overview	370
28.1	Introduction	371
28.2	Analysis of covariance	372
	Key points	382
	Computer analysis: Analysis of covariance using SPSS	383
	Recommended further reading	385

29	Multivariate analysis of variance (MANOVA)	386
	Overview	386
29.1	Introduction	387
29.2	MANOVA's two stages	390
29.3	Doing MANOVA	392
29.4	Reporting your findings	397
	Key points	398
	Computer analysis: Multivariate analysis of variance using SPSS	399
	Recommended further reading	401
30	Discriminant (function) analysis – especially in MANOVA	402
	Overview	402
30.1	Introduction	403
30.2	Doing the discriminant function analysis	405
30.3	Reporting your findings	411
	Key points	412
	Computer analysis: Discriminant function analysis using SPSS	413
	Recommended further reading	415
31	Statistics and analysis of experiments	416
	Overview	416
31.1	Introduction	417
31.2	The Patent Stats Pack	417
31.3	Checklist	418
31.4	Special cases	422
	Key points	422
	Computer analysis: Selecting subsamples of your data using SPSS	424
	Computer analysis: Recoding groups for multiple comparison tests using SPSS	426

Part 4**More advanced correlational statistics****429**

32	Partial correlation: Spurious correlation, third or confounding variables, suppressor variables	431
	Overview	431
32.1	Introduction	432
32.2	Theoretical considerations	433
32.3	Doing partial correlation	435
32.4	Interpretation	436

32.5	Multiple control variables	437
32.6	Suppressor variables	437
32.7	Example from the research literature	438
32.8	Example from a student's work	439
	Key points	440
	Computer analysis: Partial correlation using SPSS	441
33	Factor analysis: Simplifying complex data	444
	Overview	444
33.1	Introduction	445
33.2	A bit of history	446
33.3	Basics of factor analysis	447
33.4	Decisions, decisions, decisions	449
33.5	Exploratory and confirmatory factor analysis	457
33.6	Example of factor analysis from the literature	458
33.7	Reporting the results	461
	Key points	463
	Computer analysis: Principal components analysis using SPSS	464
	Recommended further reading	466
34	Multiple regression and multiple correlation	467
	Overview	467
34.1	Introduction	468
34.2	Theoretical considerations	468
34.3	Assumptions of multiple regression	474
34.4	Stepwise multiple regression example	475
34.5	Reporting the results	478
34.6	Example from the published literature	479
	Key points	481
	Computer analysis: Stepwise multiple regression using SPSS	481
	Recommended further reading	483
35	Path analysis	484
	Overview	484
35.1	Introduction	485
35.2	Theoretical considerations	485
35.3	Example from published research	492
35.4	Reporting the results	494
	Key points	496
	Computer analysis: Hierarchical multiple regression using SPSS	497
	Recommended further reading	499

Part 5 Assorted advanced techniques 501

36	Meta-analysis: Combining and exploring statistical findings from previous research	503
	Overview	503
36.1	Introduction	504
36.2	Pearson correlation coefficient as the effect size	506
36.3	Other measures of effect size	506
36.4	Effects of different characteristics of studies	507
36.5	First steps in meta-analysis	508
36.6	Illustrative example	514
36.7	Comparing a study with a previous study	517
36.8	Reporting the results	518
	Key points	520
	Computer analysis: Some meta-analysis software	520
	Recommended further reading	521
37	Reliability in scales and measurement: Consistency and agreement	522
	Overview	522
37.1	Introduction	523
37.2	Item-analysis using item–total correlation	523
37.3	Split-half reliability	525
37.4	Alpha reliability	526
37.5	Agreement among raters	529
	Key points	533
	Computer analysis: Cronbach’s alpha and kappa using SPSS	534
	Recommended further reading	535
38	Influence of moderator variables on relationships between two variables	536
	Overview	536
38.1	Introduction	537
38.2	Statistical approaches to finding moderator effects	541
38.3	Hierarchical multiple regression approach to identifying moderator effects (or interactions)	541
38.4	ANOVA approach to identifying moderator effects (i.e. interactions)	551
	Key points	555
	Computer analysis: Regression moderator analysis using SPSS	556
	Recommended further reading	557

39	Statistical power analysis: Getting the sample size right	558
	Overview	558
39.1	Introduction	559
39.2	Types of statistical power analysis and their limitations	568
39.3	Doing power analysis	571
39.4	Calculating power	572
39.5	Reporting the results	576
	Key points	577
	Computer analysis: Power analysis with G*Power	578

Part 6 Advanced qualitative or nominal techniques 581

40	Log-linear methods: Analysis of complex contingency tables	583
	Overview	583
40.1	Introduction	584
40.2	Two-variable example	586
40.3	Three-variable example	593
40.4	Reporting the results	604
	Key points	605
	Computer analysis: Log-linear analysis using SPSS	606
	Recommended further reading	608
41	Multinomial logistic regression: Distinguishing between several different categories or groups	609
	Overview	609
41.1	Introduction	610
41.2	Dummy variables	612
41.3	What can multinomial logistic regression do?	613
41.4	Worked example	615
41.5	Accuracy of the prediction	616
41.6	How good are the predictors?	617
41.7	Prediction	620
41.8	Interpreting the results	622
41.9	Reporting the results	622
	Key points	623
	Computer analysis: Multinomial logistic regression using SPSS	624
42	Binomial logistic regression	626
	Overview	626

42.1	Introduction	627
42.2	Typical example	631
42.3	Applying the logistic regression procedure	634
42.4	Regression formula	638
42.5	Reporting the results	639
	Key points	640
	Computer analysis: Binomial logistic regression using SPSS	641
43	Data mining and big data	643
	Overview	643
43.1	Introduction	644
43.2	Adopting a new thinking mode	646
43.3	Dissatisfactions with traditional psychology	647
43.4	Web scraping	648
43.5	Data mining and statistical techniques	649
	Key points	651
	Appendices	
Appendix A	Testing for excessively skewed distributions	653
Appendix B1	Large-sample formulae for the nonparametric tests	656
Appendix B2	Nonparametric tests for three or more groups	658
	Computer analysis: Kruskal–Wallis and Friedman nonparametric tests using SPSS	662
Appendix C	Extended table of significance for the Pearson correlation coefficient	664
Appendix D	Table of significance for the Spearman correlation coefficient	667
Appendix E	Extended table of significance for the t -test	670
Appendix F	Table of significance for chi-square	673
Appendix G	Extended table of significance for the sign test	674
Appendix H	Table of significance for the Wilcoxon matched pairs test	677
Appendix I	Tables of significance for the Mann–Whitney U -test	680
Appendix J	Tables of significance values for the F -distribution	683
Appendix K	Table of significance values for t when making multiple t -tests	686
	<i>Glossary</i>	689
	<i>References</i>	697
	<i>Index</i>	704
