Contents

Contributors	xiii
Part One Understanding grape and wine sensory attributes	1
1 Wine aroma vectors and sensory attributes	3
<i>Vicente Ferreira, Arancha de la Fuente, and María Pilar Sáenz-Navajas</i>	
1.1 Sensory attributes and chemical stimuli	3
1.2 The outstanding role of olfaction in food sensory properties	4
1.3 Olfaction: Sensing biologically relevant volatile molecules	4
1.4 Limitations of OAVs	6
1.5 Can wine aroma be explained from its chemical composition?	9
1.6 The internal logic of wine aroma: Wine buffer and aroma vectors	10
1.7 Wine aroma vectors	15
1.8 Interaction between aroma vectors and the overall aroma perception	26
1.9 Final remarks	28
Acknowledgments	28
References	28
2 Wine taste and mouthfeel	41
<i>Francis Canon, Soline Caillé, Pascale Sarni-Manchado, and Véronique Cheynier</i>	
2.1 Introduction	41
2.2 Wine compounds contributing to taste and mouthfeel	42
2.3 Perception of wine taste and mouthfeel	51
2.4 Tannin-protein interactions involved in astringency perception	55
2.5 Sensory analysis of wine taste and mouthfeel properties	61
2.6 Viticulture and oenology practices to optimize wine taste and mouthfeel	69
2.7 Future research trends	75
References	76
3 Wine color	97
<i>James A. Kennedy</i>	
3.1 Introduction: Contribution of color to sensory properties	97
3.2 Chemistry of wine color	97
3.3 Vineyard influences on wine color	110

3.4	Winery influences on wine color	115
3.5	Conclusions	119
	References	119
	Further reading	132
Part Two Measuring grape and wine properties		133
4	Practical methods of evaluating grape quality and quality potential	135
	<i>B.W. Zoecklein and B.H. Gump</i>	
4.1	Grape and wine quality	135
4.2	Berry development	136
4.3	Vineyard factors impacting fruit maturation	137
4.4	Climate	137
4.5	Light	140
4.6	Soil	141
4.7	Water management and grape maturity	143
4.8	Vine balance, yield, and fruit maturity	144
4.9	Asynchronous ripening and measuring vineyard variation	145
4.10	Vine-to-vine variation	146
4.11	Measuring vineyard variation	147
4.12	Fruit sorting	148
4.13	Fruit sampling methods	148
4.14	Fruit maturity gauges	149
4.15	Grape sample processing	150
4.16	Berry size/weight	150
4.17	Sugar evaluation	151
4.18	Sugar per berry and sugar loading	151
4.19	Sugar, maturity, and aroma/flavor	153
4.20	“Hangtime”—Potential for further ripening	154
4.21	Berry shrivel and firmness	155
4.22	Brix-to-alcohol ratio	156
4.23	pH, acidity, and potassium	157
4.24	Titrateable acidity	158
4.25	Organic acids	158
4.26	Buffering capacity	159
4.27	Phenolic compounds	159
4.28	Factors impacting red wine color	161
4.29	Vineyard management and grape phenols	162
4.30	Reductive strength	164
4.31	Additional evaluations at harvest	165
4.32	Berry sensory analysis (BSA)	166
4.33	Diseases and fruit rots	168
4.34	Agrochemical residue	169
4.35	Climate change and fruit maturity	170
4.36	Practical analytical methods	172

4.37	Nonconventional maturity evaluation tools	174
4.38	Conclusions	174
	References	174
5	The assessment of grape products (berry, juice, and wine) quality using vibrational spectroscopy coupled with multivariate analysis	187
	<i>A.C. Power, J. Chapman, S. Chandra, J.J. Roberts, R. Dambergs, and D. Cozzolino</i>	
5.1	Introduction	187
5.2	In vineyard, laboratory, and grape payment applications	189
5.3	Grapevine leaf and tissue analysis	194
5.4	Grape must and juice analysis	195
5.5	Juice compositional analysis	196
5.6	Wine compositional analysis	196
5.7	Monitoring wine fermentation	198
5.8	Wine authenticity	199
5.9	In bottle measurement	201
5.10	Conclusion	201
	References	202
6	Advances in microbiological quality control	207
	<i>J.P. Osborne</i>	
6.1	Introduction	207
6.2	Microbial spoilage of wine	208
6.3	Detecting microorganisms during the winemaking process	217
6.4	Microbial control and sanitation in the winery	222
6.5	Quality control programs	227
6.6	An integrative approach to microbiological quality control in the winery	228
	References	230
7	Sensory analysis of wine	243
	<i>Isabelle Lesschaeve and Ann C. Noble</i>	
7.1	Introduction to sensory analysis, the scientific discipline of wine tasting	243
7.2	Sensory tasting environment and best practices	244
7.3	Sensory analysis methods	249
7.4	Assessing consumer product liking	261
7.5	Integration of sensory evaluation techniques in wine businesses of all sizes	264
7.6	Conclusions and perspectives for the future	268
7.7	Additional resources	269
	References	269

8	Wine authenticity and traceability	279
	<i>Ioannis S. Arvanitoyannis</i>	
8.1	Introduction to wine authenticity	279
8.2	Classical and novel methods for testing wine authenticity	280
8.3	Multivariate analysis	310
8.4	Wine traceability	313
8.5	Legislation regarding traceability (EU Directive 178/2002)	315
8.6	Application of ISO 22005:2007 in the wine industry	315
8.7	Conclusions	319
	Appendix (EU Directive 178/2002)	327
	References	328
 Part Three Viticulture technologies, grape composition and wine quality attributes		 339
9	Terroir: The effect of the physical environment on vine growth, grape ripening, and wine sensory attributes	341
	<i>C. van Leeuwen</i>	
9.1	Introduction	341
9.2	The climate component of terroir	345
9.3	The effect of geology and geomorphology in terroir expression	350
9.4	The soil effect in viticulture	353
9.5	Effect of vine water status in terroir expression	363
9.6	Global indicators in terroir assessment	368
9.7	Terroir zoning	370
9.8	Hierarchy of terroir factors	374
9.9	Management of terroir	378
9.10	Conclusions	380
	Acknowledgments	381
	References	381
10	Genetics and genomic approaches to improve grape quality for winemaking	395
	<i>P.R. Young and M.A. Vivier</i>	
10.1	Introduction	395
10.2	Viticulture in the context of the broader agricultural sector: A brief overview	396
10.3	Grape and wine quality	398
10.4	Improving grape quality for winemaking	401
10.5	Grapevine improvement	422
10.6	Current research on quality aspects	431
10.7	Conclusions and future trends	434
	References	435

11	Viticultural and vineyard management practices and their effects on grape and wine quality	443
	<i>Andrew G. Reynolds</i>	
11.1	Introduction	443
11.2	Fruit exposure and fruit composition	445
11.3	Effects of viticultural practices on fruit composition and wine quality	452
11.4	Aroma compounds: Why should a viticulturist measure aroma compounds?	482
11.5	Effects of viticultural practices on odor-active substances in grapes and wines	494
11.6	Effects of growing season canopy management on odor-active substances	498
11.7	Effects of shoot density and crop level on odor-active substances	502
11.8	Influence of training systems on odor-active substances in grapes and wines	503
11.9	Influence of irrigation, water relations, and soil management on odor-active substances in grapes and wines	505
11.10	Impact of vineyard site on odor-active substances in grapes and wines	507
11.11	Impact of prefermentation decisions and practices	510
11.12	Conclusions	513
	References	514
	Further reading	539
12	Precision Viticulture: Managing vineyard variability for improved quality outcomes	541
	<i>R.G.V. Bramley</i>	
12.1	Introduction	541
12.2	Spatial variation in grape yield and vine vigor	544
12.3	Spatial variation in fruit and wine quality	553
12.4	The drivers of vineyard variation	558
12.5	Options for targeting management within vineyards	563
12.6	Precision Viticulture and <i>terroir</i>	571
12.7	Future directions	573
	Acknowledgments	575
	References	575
13	Fungal contaminants in the vineyard and wine quality and safety	587
	<i>Eileen S. Scott, Robert G. Damberg, Belinda E. Stummer, and Tijana Petrovic</i>	
13.1	Introduction	587
13.2	Common fungal diseases that affect grape and wine quality	588
13.3	Effects of fungal diseases on grape and wine quality	591

13.4	Detection and quantification of fungal contamination of grapes, juice, and wine	599
13.5	Alternatives to conventional fungicides for control of powdery mildew and botrytis and their effects on wine quality	605
13.6	Future prospects	608
13.7	Conclusions	611
13.8	A selection of resources	611
	Acknowledgments	611
	References	612
14	Controlling ochratoxin A in the vineyard and winery	625
	<i>Paola Battilani and Angela Silva</i>	
14.1	Ochratoxin A and its effect on health	625
14.2	Black Aspergilli and OTA production in the vineyard	627
14.3	Fate of OTA in the winery	632
14.4	OTA in wines internationally	637
14.5	Risk assessment: Contribution of wine in human exposure to OTA	643
14.6	A decision support system to minimize OTA in wine	646
14.7	Lack of knowledge and the future	649
	References	650
	Further reading	660
15	Advances in grape processing equipment	661
	<i>Monika Christmann and Maximilian Freund</i>	
15.1	Grape processing	661
15.2	Mechanical harvesting	668
15.3	Grape transportation systems	675
15.4	Grape treatment	682
15.5	Presses	693
15.6	Conclusions	701
	References	701
	Further reading	704
16	Grape harvesting and effects on wine composition	705
	<i>Paul A. Kilmartin and Anita Oberholster</i>	
16.1	Introduction	705
16.2	Harvesting options	706
16.3	Harvesting of white grapes: Volatiles, acids, phenolics, and proteins	707
16.4	Harvesting of white grapes: C6 compounds and varietal thiols	708
16.5	Harvesting of red grapes: Phenolics and aroma profiling	716
16.6	Harvesting of red grapes: Impact of optical sorting	717

16.7	Concluding remarks	721
	References	722
17	Climate change and its consequences for viticulture	727
	<i>Gregory V. Jones, Everard J. Edwards, Marcos Bonada, Victor O. Sadras, Mark P. Krstic, and Markus J. Herderich</i>	
17.1	Climate change, viticulture, and wine	727
	<i>Gregory V. Jones</i>	
17.1.1	Global climate change	727
17.1.2	Climate and wine production	728
17.1.3	Observed changes in wine regions	729
17.1.4	Predicted changes globally and in wine regions	733
17.1.5	Summary and conclusions	735
	References	737
17.2	Climate change and drought: Managing with reduced rainfall and increased evapotranspiration	741
	<i>Everard J. Edwards</i>	
17.2.1	Introduction	741
17.2.2	Vine water use and effects of reduced water availability on vine physiology	742
17.2.3	Optimizing water use in irrigated viticulture and the potential role of rootstocks	745
17.2.4	Managing drought stress in rainfed systems	748
17.2.5	Concluding remarks	750
	References	750
17.3	Thermal decoupling of sugar, color, and flavor in berries, and implications for wine balance	755
	<i>Victor O. Sadras and Marcos Bonada</i>	
17.3.1	Introduction	755
17.3.2	Decoupling of color and sugar	757
17.3.3	Decoupling of berry flavor components	758
17.3.4	Vineyard practices to restore fruit and wine balance	759
	References	760
17.4	Smoke taint and climate change	763
	<i>Mark P. Krstic, Julie A. Culbert, Mango Parker, and Markus J. Herderich</i>	
17.4.1	Introduction	763
17.4.2	Smoke composition	765
17.4.3	Influence of smoke exposure on vine physiology, berry composition, and wine composition and sensory properties	767
17.4.4	Factors affecting the uptake of volatile phenols in smoke	771

17.4.5	Diagnosing smoke-affected grapes and wine	773
17.4.6	Options for managing smoke-exposed fruit	773
17.4.7	Fire damage to grapevines	775
	References	775
