Part One Winemaking technologies and wine quality

1	Extraction technologies and wine quality	3
	<i>Alain Razungles</i>	
1.1	Introduction	3
1.2	Chemical factors in extraction	4
1.3	Biological factors in extraction	6
1.4	Physical factors in extraction	7
1.5	Techniques and procedures applied in white and rosé wine vinification	9
1.6	Red wine vinification with traditional maceration	12
1.7	Procedures for red and other wines based on displacement of the must	15
1.8	Procedures for red and other wines based on displacement of the pomace: Punching down	17
1.9	Thermal treatments for red and other wines applied to traditional maceration	19
1.10	Thermovinification of red and other wines	22
1.11	Flash-release procedure for red and other wines	25
1.12	The thermo-release procedure for red and other wines	28
1.13	Vinification of red and other wines by carbonic maceration	28
1.14	Traditional vinification of red and other wines with whole berries	31
1.15	Draining and pressing	31
1.16	Conclusion	35
	References	35
2	Improving yeast and fermentation management	43
	<i>Gordon Specht</i>	
2.1	Introduction	43
2.2	Yeast and fermentation management and wine quality	44
2.3	Yeast rehydration and handling	45
2.4	Yeast inoculation	47
2.5	Yeast inoculation rate	48
2.6	Yeast inoculation timing	49

2.7	Sequential yeast inoculation strategies	49
2.8	Yeast storage	51
2.9	Nutrient strategies	52
2.10	Sulfur compounds and dealing with them	63
2.11	Preventing stuck and sluggish fermentations	64
2.12	Restarting stuck and sluggish fermentations	68
2.13	Conclusions	70
	Acknowledgments	71
	References	71
3	Metabolic engineering of wine yeast and advances in yeast selection methods for improved wine quality	77
	<i>B. Divol and F.F. Bauer</i>	
3.1	Introduction	77
3.2	Improving wine yeasts: Current targets	80
3.3	A systems biology approach to wine yeast studies	84
3.4	Biotechnology, systems biology and the generation of new yeast strains	87
3.5	Molecular biology and systems biology in the identification of wine yeasts	91
3.6	Future trends	94
	References	95
4	Malolactic fermentation and its effects on wine quality and safety	105
	<i>Aline Lonvaud-Funel</i>	
4.1	Introduction	105
4.2	Development of lactic acid bacteria in the wine microbiota	106
4.3	Variations in the diversity of lactic acid bacteria species during winemaking	117
4.4	Lactic acid bacteria and improving wine quality	120
4.5	Lactic acid bacteria and wine spoilage, undesirable lactic acid bacteria strains	125
4.6	Controlling malolactic fermentation by malolactic starters	130
4.7	Concluding remarks and prospects for wine lactic acid bacteria and malolactic fermentation	134
	References	134
5	Enzymes and wine quality	141
	<i>Rose-Marie Llaubères</i>	
5.1	Introduction	141
5.2	Definitions and production methods	141
5.3	Regulatory aspects	145
5.4	Enzyme applications in winemaking	146

5.5	Advances in enzyme discovery	151
5.6	Enzyme use in pre-fermentation stages	156
5.7	Enzyme use in post-fermentation stages	166
5.8	Monitoring enzyme performance	172
5.9	Future trends	175
5.10	Conclusions	175
5.11	Sources of further information	176
	Acknowledgments	176
	References	177
	Further reading	181
6	Membrane and other techniques for the management of wine composition	183
	<i>D. Wollan</i>	
6.1	Introduction	183
6.2	Some caveats	184
6.3	Some perspective—Convention and intervention	184
6.4	Next-generation tools—Phase change techniques	185
6.5	Membrane separation techniques	186
6.6	Membrane separation treatment and recombination	194
6.7	Volatile acidity removal	194
6.8	The problem of excess alcohol	196
6.9	Taint removal	202
6.10	Ultrafiltration	206
6.11	Electrodialysis	207
	References	211
	Further reading	212
7	Aging on lees and their alternatives: Impact on wine	213
	<i>Hervé Alexandre</i>	
7.1	What are wine lees?	213
7.2	Yeast autolysis	213
7.3	Aging of red wines on lees	226
7.4	Yeast lees' adsorption properties	228
7.5	Improving wine aging on lees and alternatives	230
7.6	Conclusions	234
	References	234
	Further reading	243
8	New directions in stabilization, clarification, and fining	245
	<i>Belinda Kemp, Matteo Marangon, Andrea Curioni, Elizabeth Waters, and Richard Marchal</i>	
8.1	Introduction	245
8.2	White wines, proteins, and haze	246
8.3	The origin of wine proteins	246

8.4	Characterization of wine proteins	247
8.5	Protein levels in white wines	249
8.6	Mechanism of protein haze formation in wine	252
8.7	Bentonite fining	255
8.8	Use of gelatine in wine fining	261
8.9	Yeast protein extracts	263
8.10	Wine fining with nonanimal proteins	266
8.11	Other fining agents	271
8.12	Equipment for the addition of fining agents to wine	273
8.13	Use of fungus proteases	273
8.14	Wine fining and allergies	275
8.15	New fining technologies	283
8.16	Wine fining: General conclusion and practical recommendations	285
	Acknowledgments	286
	References	286
9	Microoxygenation: Effect on wine composition and quality	303
	<i>W.J. du Toit and J.L. Alexandre-Tudo</i>	
9.1	Introduction	303
9.2	Basic oxidation reactions and substrates of oxidation in wine	303
9.3	Basic phenolic reactions in red wine involving oxygen	305
9.4	When does oxygen come into contact with wine?	306
9.5	The traditional method of microoxygenation	307
9.6	Alternatives or alternative methods for microoxygenation	307
9.7	Effect of microoxygenation on the chemical and sensorial composition of red wine	308
9.8	Effect of microoxygenation on the microbiology of wine	311
9.9	Microoxygenation research at Department of Viticulture and Oenology Stellenbosch University	313
9.10	Oxygen dosages and treatment periods	321
9.11	Deciding on the applicability of microoxygenation and monitoring the process	322
9.12	Future trends	325
	References	325
10	Alternatives to cork in wine bottle closures	331
	<i>J. Goode</i>	
10.1	Introduction	331
10.2	The key property of closures: Oxygen transmission	332
10.3	The various closure types	334
10.4	Conclusions and future trends	344
	References	345

11	Organic wine-making from the research project to the legal framework and a growing sector	347
	<i>Doris Rauhut and Cristina Micheloni</i>	
11.1	Introduction	347
11.2	Organic wine: A synthesis attempt	351
11.3	Harmonization process	359
11.4	After ORWINE project, research needs	363
11.5	From ORWINE to the EU regulation on organic wine-making	363
11.6	Organic wine a sector that continues to grow	366
	Acknowledgments	366
	References	367
	Further reading	368
	Part Two Managing wine sensory quality	
12	Yeast selection for wine flavor modulation	371
	<i>P. Marullo and D. Dubourdieu</i>	
12.1	Introduction	371
12.2	Key issues in efficient wine yeast selection	372
12.3	Selection of natural yeast isolates: Methods and limits	373
12.4	Metabolic engineering	374
12.5	Conventional genetic strategies	375
12.6	Mixed cultures as an alternative strategy	380
12.7	Yeast by-products affecting wine aromas: Glycerol	381
12.8	Yeast by-products affecting wine aromas: Acetic acid	384
12.9	Yeast by-products affecting wine aromas: Hydrogen sulphide	386
12.10	Yeast by-products affecting wine aromas: Higher alcohols	390
12.11	Yeast by-products affecting wine aromas: Esters	396
12.12	Varietal aromas resulting from grape precursor biotransformation	401
12.13	Conclusions and future trends	411
	References	412
13	<i>Brettanomyces/Dekkera</i> off-flavor and other microbial spoilage	427
	<i>Lorenza Conterno and Thomas Henick-Kling</i>	
13.1	Introduction	427
13.2	<i>Brettanomyces/Dekkera</i> off-flavors and their related metabolism	431
13.3	<i>Brettanomyces/Dekkera</i> taxonomy and phylogenetic relationships with other wine yeasts	435

13.4	<i>Brettanomyces/Dekkera</i> physiology	436
13.5	Other defects associated with the presence of <i>Brettanomyces/Dekkera</i>	442
13.6	Other faults associated with microbial spoilage	445
13.7	Detection and methods to prevent and correct <i>Brettanomyces bruxellensis</i> spoilage faults	451
13.8	Conclusions	457
	References	457
14	Reducing cork taint in wine	477
	<i>R. Jung and V. Schaefer</i>	
14.1	Introduction: Cork taint	477
14.2	Compounds causing musty-moldy off-flavors	477
14.3	Quality management and control methods for wine corks: Introduction	484
14.4	Test procedures to evaluate the quality of cork stoppers	485
14.5	Standard test procedures	486
14.6	Additional test procedures	489
14.7	Handling and processing of corks and bottles during bottling and storage	490
14.8	Prevention of musty-moldy off-flavors in the cellar environment	494
14.9	Methods to reduce musty off-flavors in contaminated wines	500
	References	504
15	Ladybug (<i>Coccinellidae</i>) taint in wine	509
	<i>Andreea Botezatu and Gary Pickering</i>	
15.1	Introduction	509
15.2	Quality implications	509
15.3	Causal compound(s)	510
15.4	Threshold and tolerances	514
15.5	Other Coccinellidae species	515
15.6	Postharvest prevention and remediation	516
15.7	Conclusions and further research	520
	References	521
	Further reading	524
16	Understanding and controlling nonenzymatic wine oxidation	525
	<i>Paul A. Kilmartin</i>	
16.1	Introduction	525
16.2	Oxygen in wine	525
16.3	Polyphenol oxidation	527
16.4	Oxidation of aroma compounds	531

16.5	Measures of wine oxidation status	534
16.6	White wine oxidation	536
16.7	Red wine oxidation	538
16.8	Influence of wine antioxidants	541
16.9	Concluding remarks	545
	References	547
17	Aging and flavor deterioration in wine	559
	<i>A.W. Linsenmeier, D. Rauhut, and W.R. Sponholz</i>	
17.1	Introduction: Aging	559
17.2	Sensory changes during storage/aging	560
17.3	Aromatic compounds related to flavor deterioration	561
17.4	Chemical reactions of aging	569
17.5	Factors influencing the aging process and future trends in research	573
17.6	Untypical aging (UTA) off-flavor	575
	References	586
18	Biogenic amines and the winemaking process	595
	<i>M.V. Moreno-Arribas, A.Y. Smit, and M. du Toit</i>	
18.1	Introduction	595
18.2	Incidence of biogenic amines in wines and health effects	595
18.3	Formation of biogenic amines during the winemaking process	603
18.4	Methods of detection and quantification of biogenic amines in wines	614
18.5	Methods and tools to prevent the presence of biogenic amines in wines	616
18.6	Future trends	617
	References	618
19	Fortified wines	629
	<i>Luis Zea, María P. Serratos, A. Monforte, and Antonio César Silva Ferreira</i>	
19.1	Sherry wines. A particular sensory profile	629
	<i>Luis Zea and María P. Serratos</i>	
19.1.1	Introduction	629
19.1.2	Different Sherry wines	630
19.1.3	Aromas of the biological aging	632
19.1.4	Aroma compounds of the oxidative aging	636
19.1.5	Sweet Sherry wines	639
19.1.6	Odorant series interpreting the aroma of Sherries	641
	References	647

19.2 Port	649
<i>Ana Rita Monforte and Antonio César Silva Ferreira</i>	
19.2.1 Viticulture	649
19.2.2 Key aroma compounds in Port wine	652
19.2.3 Aged Port wine flavor: A systems chemistry approach	656
19.2.4 Concluding remarks	664
References	664
20 Botrytized wines	669
<i>Philippe Darriet and Panagiotis Stamatopoulos</i>	
20.1 Introduction	669
20.2 Noble rot	671
20.3 Composition of Botrytized grapes and musts, and effects on wine	677
20.4 Aroma composition of Botrytized wines—Impact of grape Botrytization	682
20.5 Vinification of noble rot sweet wines	691
20.6 Wine aging	701
20.7 Tokaji wines	702
20.8 German Botrytized wines (Trockenbeerenauslese)	704
References	706
21 Postharvest physiology of wine grape dehydration	717
<i>Andrea Bellincontro and Fabio Mencarelli</i>	
21.1 Introduction	717
21.2 General metabolism	719
21.3 Changes in specific compounds	723
21.4 Vinification	727
21.5 Concluding remarks	740
Acknowledgments	742
References	742
