# Acknowledgments

**T**he foundation for our approach to project design and appraisal consists of ideas and concepts developed from our own work over the course of the past 25 years, and interactions with fellow consultants and others with whom we have collaborated, who graciously shared their knowledge and experiences through informal discussions and communications and formal presentations, and who have added immeasurably to the scope and depth of our effort. Their knowledge and experience in their respective areas of expertise has fused with that of the authors, so it is possible to identify only approximately the areas of contribution of each of the following individuals, to whom we are deeply indebted (listed in alphabetical order):

Jadranko Bendekovic, the economic viewpoint, particularly the value-added approach; Janusz Lukasz, forecasting and the basic idea for the expansion project case study; Andrzej Mlotkowski, project planning, implementation, and contracting; Joseph Moongananiyil who coordinated the work of the staff of the Enterprise Development Institute in Ahmedabad, India, with whom the authors communicated on a wide variety of topics; Klaus Pertz, financial analysis; Reino Routamo, concepts of futuristic forecasting and the basic idea for the yarns case study; Maria Elena Scaffo, market analysis and finance; Aleksander Sulejewicz, who contributed widely to the chapter on economic analysis; Robert Youker, who greatly influenced the presentation on project implementation and management; and Allan Young, project finance, financial planning, and risk. Jerzy Kurowski is responsible for much of the preparation of graphical materials. Michael Lisk, production editor at Wiley, was instrumental in integrating, organizing, and adding to the coherence of the manuscript.

Although this edition owes much of its usefulness to contributions of the aforementioned individuals, the authors are solely responsible for any errors and omissions.
