Foreword

The field of intercultural communication (IC) has advanced significantly over the past 75 years. In the 1940s through the 1950s, cultural anthropologists Clyde and Florence Kluckhohn and Fred Strodtbeck established criteria which explained societal values that illuminated social interaction styles between people of different cultures, which was useful to IC later on. In the 1950s through the 1970s, Edward T. Hall, another anthropologist, laid the groundwork for the study of IC through his work for the American Foreign Service, producing influential constructs such as high- and low-context cultures and their relative effects on communication, and space and time perceptions in cultures. For the next four decades, scholars from various fields of study such as psychology, linguistics, and training contributed to the developing discipline of IC. A few key figures are: William B. Gudykunst (theorizing about IC), Edward C. Stewart (contrast culture method, American cultural patterns), John C. (Jack) Condon (semantics, communication), Milton Bennett (linguistics, intercultural training), Young-Yun Kim (international negotiation), Stella Ting-Toomey (identity negotiation), Judith N. Martin (communication), and of course, psychologist Geert Hofstede (cultural dimensions). Cross-cultural psychologists such as Harry Triandis, Hazel Markus, Shinobu Kitayama, and Michael Bond brought additional insights. The study of communication expanded to include scholars who researched the effect of culture on *business* communication.

In the 2000s two influential areas of study contributed to IC and business leadership: cultural intelligence (CQ), first presented by Christopher Earley, Soon Ang, and Linn Van Dyne; and the GLOBE (Global Leadership Organizational Behavior Effectiveness) ten-year study *Culture, Leadership, and Organizations*, by Robert House and others, which brought the importance of IC competence front and center in global business. The GLOBE research project was the first study of its kind, mobilizing nearly 200 social scientists from 62 countries around the world for interviews with over 17,000 employees from almost 1,000 organizations worldwide. The study sought to determine the characteristics of a global leader. As Robert House and his colleagues stated, an outstanding leader is a person in an organization or industry who is

“exceptionally skilled at motivating, influencing, or enabling others or groups to contribute to the success of the organization or task” (House et al., 2004, p. 15). His colleague, Mansour Javidan, extended this definition to: “someone who is able to handle complexity, risk, and ambiguity in a fast-paced and multicultural environment successfully, because he/[she] possesses knowledge about cultural differences and mindfully reflects on behaviors, attitudes, values, and beliefs while interacting with others” (Javidan et al., 2016).

Despite the large body of research in IC and the GLOBE study in leadership, some still ignore the need for cultural knowledge and communication competence in leading global organizations. Because nation states, societies, and individuals are able to interact more easily and rapidly today than ever before, it does *not* mean that people are able to do so more effectively. Communicating successfully with people who are like you is often tricky; however, communicating successfully with people who are different from you is much harder.

Some business people assume knowledge of another culture and competence in IC are becoming irrelevant because we are moving toward a global culture. Evidence suggests that this is quite untrue. In the 21st century alone, at least half a dozen new nations have appeared, after separating from other countries, because their citizens want to retain and nurture their own cultures. Furthermore, populations who have been driven from their own land by war, climate change, and economic pressures and have migrated to new countries, bringing their own cultures with them, need IC skills, as do those who receive them. More than ever, we need to communicate with each other, seek to understand each other, and develop an unprecedented level of competence in recognizing how culture affects everything we think and do, including global leadership. That goes not only for business, but for day-to-day contacts in our lives. To connect successfully, we need knowledge, understanding, and skills.

Intercultural Communication for Global Business challenges both the business student and the business professional to become more culturally competent, what the business community now defines as *culturally intelligent*. This book is both accessible and practical, bringing together theories and concepts in applications of IC. It enables readers to put into practice—immediately—what they read. The reader finds tools to address the inner work that is required of today’s global leader, which includes first developing greater awareness of the role of cultures of people who are different, then engaging in reflection about success or failure in interactions, and finally developing skills for interacting successfully and employing them in successful communication behaviors.

This book is about how *you* can develop your own cultural competence both personally and professionally, for successful IC in global leadership.
