

Statistics for Economics, Accounting and Business Studies

Seventh edition

Michael Barrow

Contents

Guided tour of the book	xii
Publisher's acknowledgements	xiv
Preface to the seventh edition	xvi
Custom publishing	xviii
Introduction	1
1 Descriptive statistics	7
Learning outcomes	8
Introduction	8
Summarising data using graphical techniques	10
Looking at cross-section data: wealth in the United Kingdom in 2005	16
Summarising data using numerical techniques	27
The box and whiskers diagram	47
Time-series data: investment expenditures 1977–2009	48
Graphing bivariate data: the scatter diagram	63
Data transformations	67
The information and data explosion	70
Writing statistical reports	72
Guidance to the student: how to measure your progress	74
Summary	75
<i>Key terms and concepts</i>	75
<i>Reference</i>	76
<i>Formulae used in this chapter</i>	77
<i>Problems</i>	78
<i>Answers to exercises</i>	84
Appendix 1A: Σ notation	88
<i>Problems on Σ notation</i>	89
Appendix 1B: E and V operators	90
Appendix 1C: Using logarithms	91
<i>Problems on logarithms</i>	92
2 Probability	93
Learning outcomes	93
Probability theory and statistical inference	94
The definition of probability	94
Probability theory: the building blocks	97
Events	98
Bayes' theorem	110
Decision analysis	112

Summary	116
<i>Key terms and concepts</i>	117
<i>Formulae used in this chapter</i>	118
<i>Problems</i>	118
<i>Answers to exercises</i>	124
3 Probability distributions	128
Learning outcomes	128
Introduction	129
Random variables and probability distributions	130
The Binomial distribution	131
The Normal distribution	137
The distribution of the sample mean	145
The relationship between the Binomial and Normal distributions	151
The Poisson distribution	153
Summary	156
<i>Key terms and concepts</i>	156
<i>Formulae used in this chapter</i>	157
<i>Problems</i>	157
<i>Answers to exercises</i>	162
4 Estimation and confidence intervals	164
Learning outcomes	164
Introduction	165
Point and interval estimation	165
Rules and criteria for finding estimates	166
Estimation with large samples	170
Precisely what is a confidence interval?	173
Estimation with small samples: the t distribution	181
Summary	186
<i>Key terms and concepts</i>	187
<i>Formulae used in this chapter</i>	188
<i>Problems</i>	188
<i>Answers to exercises</i>	191
Appendix: Derivations of sampling distributions	193
5 Hypothesis testing	195
Learning outcomes	195
Introduction	196
The concepts of hypothesis testing	196
The Prob-value approach	203
Significance, effect size and power	204
Further hypothesis tests	207
Hypothesis tests with small samples	211
Are the test procedures valid?	213
Hypothesis tests and confidence intervals	214

Independent and dependent samples	215
Issues with hypothesis testing	218
Summary	219
<i>Key terms and concepts</i>	220
<i>Reference</i>	220
<i>Formulae used in this chapter</i>	221
<i>Problems</i>	221
<i>Answers to exercises</i>	226
6 The χ^2 and F distributions	230
Learning outcomes	230
Introduction	231
The χ^2 distribution	231
The F distribution	245
Analysis of variance	248
Summary	255
<i>Key terms and concepts</i>	255
<i>Formulae used in this chapter</i>	256
<i>Problems</i>	256
<i>Answers to exercises</i>	259
Appendix Use of χ^2 and F distribution tables	261
7 Correlation and regression	263
Learning outcomes	263
Introduction	264
What determines the birth rate in developing countries?	265
Correlation	267
Regression analysis	276
Inference in the regression model	283
Route map of calculations	291
Some other issues in regression	293
Gapminder again	297
Summary	298
<i>Key terms and concepts</i>	299
<i>References</i>	299
<i>Formulae used in this chapter</i>	300
<i>Problems</i>	301
<i>Answers to exercises</i>	304
8 Multiple regression	307
Learning outcomes	307
Introduction	308
Principles of multiple regression	309
What determines imports into the United Kingdom?	310
Finding the right model	330

Summary	338
<i>Key terms and concepts</i>	339
<i>References</i>	339
<i>Formulae used in this chapter</i>	340
<i>Problems</i>	340
<i>Answers to exercises</i>	344
9 Data collection and sampling methods	349
Learning outcomes	349
Introduction	350
Using secondary data sources	351
Collecting primary data	355
Random sampling	356
Calculating the required sample size	365
Collecting the sample	367
Case study: the UK Living Costs and Food Survey	370
Summary	371
<i>Key terms and concepts</i>	372
<i>References</i>	372
<i>Formulae used in this chapter</i>	373
<i>Problems</i>	373
10 Index numbers	374
Learning outcomes	374
Introduction	375
A simple index number	376
A price index with more than one commodity	377
Using expenditures as weights	385
Quantity and expenditure indices	387
The Consumer Price Index	393
Discounting and present values	394
Inequality indices	399
The Lorenz curve	399
The Gini coefficient	402
Concentration ratios	407
Summary	409
<i>Key terms and concepts</i>	409
<i>References</i>	410
<i>Formulae used in this chapter</i>	411
<i>Problems</i>	411
<i>Answers to exercises</i>	416
Appendix: deriving the expenditure share form of the Laspeyres price index	419
