Detailed Contents

1 Evolution, the Themes of Biology, and Scientific Inquiry 2

Inquiring About Life 2

CONCEPT 1.1 The study of life reveals unifying themes 4

Theme: New Properties Emerge at Successive Levels of Biological Organization 5

Theme: Life's Processes Involve the Expression and Transmission of Genetic Information 7

Theme: Life Requires the Transfer and Transformation of Energy and Matter 9

Theme: From Molecules to Ecosystems, Interactions Are Important in Biological Systems 10

CONCEPT 1.2 The Core Theme: Evolution accounts for the unity and diversity of life 11

Classifying the Diversity of Life 12

Charles Darwin and the Theory of Natural Selection 14

The Tree of Life 15

CONCEPT 1.3 In studying nature, scientists make observations and form and test hypotheses 16

Exploration and Observation 17

Forming and Testing Hypotheses 17

The Flexibility of the Scientific Process 18

A Case Study in Scientific Inquiry: Investigating Coat Coloration in Mouse Populations 20

Experimental Variables and Controls 20

Theories in Science 21

CONCEPT 1.4 Science benefits from a cooperative approach and diverse viewpoints 22

Building on the Work of Others 22

Science, Technology, and Society 23

The Value of Diverse Viewpoints in Science 24

UNIT 1 THE CHEMISTRY OF LIFE 27

Interview: Lovell Jones 27

2 The Chemical Context of Life 28

A Chemical Connection to Biology 28

CONCEPT 2.1 Matter consists of chemical elements in pure form and in combinations called compounds 29

Elements and Compounds 29

The Elements of Life 29

Case Study: Evolution of Tolerance to Toxic Elements 30

CONCEPT 2.2 An element's properties depend on the structure of its atoms 30

Subatomic Particles 30

Atomic Number and Atomic Mass 31

Isotopes 31

The Energy Levels of Electrons 32

Electron Distribution and Chemical Properties 34

Electron Orbitals 35

CONCEPT 2.3 The formation and function of molecules depend on chemical bonding between atoms 36

Covalent Bonds 36

Ionic Bonds 37

Weak Chemical Interactions 38

Molecular Shape and Function 39

CONCEPT 2.4 Chemical reactions make and break chemical bonds 40

3 Water and Life 44

The Molecule That Supports All of Life 44

CONCEPT 3.1 Polar covalent bonds in water molecules result in hydrogen bonding 45

CONCEPT 3.2 Four emergent properties of water contribute to Earth's suitability for life 45

Cohesion of Water Molecules 45

Moderation of Temperature by Water 46

Floating of Ice on Liquid Water 47

Water: The Solvent of Life 49

Possible Evolution of Life on Other Planets 50

CONCEPT 3.3 Acidic and basic conditions affect living organisms 51

Acids and Bases 51

The pH Scale 51

Buffers 52

Acidification: A Threat to Our Oceans 53

4 Carbon and the Molecular Diversity of Life 56

Carbon: The Backbone of Life 56

CONCEPT 4.1 Organic chemistry is the study of carbon compounds 57

Organic Molecules and the Origin of Life on Earth 57

CONCEPT 4.2 Carbon atoms can form diverse molecules by bonding to four other atoms 58

The Formation of Bonds with Carbon 59

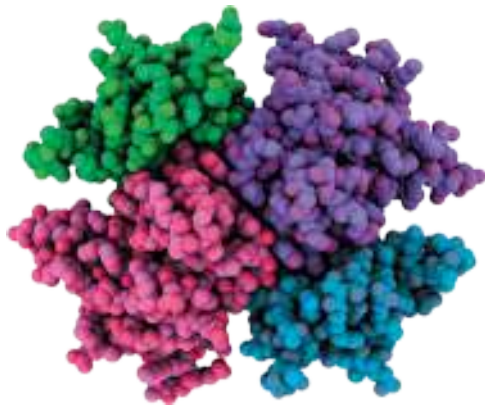

Molecular Diversity Arising from Variation in Carbon Skeletons 60

CONCEPT 4.3 A few chemical groups are key to molecular function 62

The Chemical Groups Most Important in the Processes of Life 62

ATP: An Important Source of Energy for Cellular Processes 64

The Chemical Elements of Life: A Review 64

5 The Structure and Function of Large Biological Molecules 66

The Molecules of Life 66

CONCEPT 5.1 Macromolecules are polymers, built from monomers 67

The Synthesis and Breakdown of Polymers 67

The Diversity of Polymers 67

CONCEPT 5.2 Carbohydrates serve as fuel and building material 68

Sugars 68

Polysaccharides 70

CONCEPT 5.3 Lipids are a diverse group of hydrophobic molecules 72

Fats 72

Phospholipids 74

Steroids 75

CONCEPT 5.4 Proteins include a diversity of structures, resulting in a wide range of functions 75

Amino Acid Monomers 75

Polypeptides (Amino Acid Polymers) 78

Protein Structure and Function 78

CONCEPT 5.5 Nucleic acids store, transmit, and help express hereditary information 84

The Roles of Nucleic Acids 84

The Components of Nucleic Acids 84

Nucleotide Polymers 85

The Structures of DNA and RNA Molecules 86

CONCEPT 5.6 Genomics and proteomics have transformed biological inquiry and applications 86

DNA and Proteins as Tape Measures of Evolution 87

UNIT 2 THE CELL 92

Interview: Elba Serrano 92

6 A Tour of the Cell 93

The Fundamental Units of Life 93

CONCEPT 6.1 Biologists use microscopes and biochemistry to study cells 94

Microscopy 94

Cell Fractionation 96

CONCEPT 6.2 Eukaryotic cells have internal membranes that compartmentalize their functions 97

Comparing Prokaryotic and Eukaryotic Cells 97

A Panoramic View of the Eukaryotic Cell 99

CONCEPT 6.3 The eukaryotic cell's genetic instructions are housed in the nucleus and carried out by the ribosomes 102

The Nucleus: Information Central 102

Ribosomes: Protein Factories 102

CONCEPT 6.4 The endomembrane system regulates protein traffic and performs metabolic functions 104

The Endoplasmic Reticulum: Biosynthetic Factory 104

The Golgi Apparatus: Shipping and Receiving Center 105

Lysosomes: Digestive Compartments 107

Vacuoles: Diverse Maintenance Compartments 108

The Endomembrane System: *A Review* 108

CONCEPT 6.5 Mitochondria and chloroplasts change energy from one form to another 109

The Evolutionary Origins of Mitochondria and Chloroplasts 109

Mitochondria: Chemical Energy Conversion 110

Chloroplasts: Capture of Light Energy 110

Peroxisomes: Oxidation 112

CONCEPT 6.6 The cytoskeleton is a network of fibers that organizes structures and activities in the cell 112

Roles of the Cytoskeleton: Support and Motility 112

Components of the Cytoskeleton 113

CONCEPT 6.7 Extracellular components and connections between cells help coordinate cellular activities 118

Cell Walls of Plants 118

The Extracellular Matrix (ECM) of Animal Cells 118

Cell Junctions 119

CONCEPT 6.8 A cell is greater than the sum of its parts 121

7 Membrane Structure and Function 126

Life at the Edge 126

CONCEPT 7.1 Cellular membranes are fluid mosaics of lipids and proteins 127

The Fluidity of Membranes 128

Evolution of Differences in Membrane Lipid Composition 129

Membrane Proteins and Their Functions 129

The Role of Membrane Carbohydrates in Cell-Cell Recognition 130

Synthesis and Sidedness of Membranes 131

CONCEPT 7.2 Membrane structure results in selective permeability 131

The Permeability of the Lipid Bilayer 132

Transport Proteins 132

CONCEPT 7.3 Passive transport is diffusion of a substance across a membrane with no energy investment 132

Effects of Osmosis on Water Balance 133

Facilitated Diffusion: Passive Transport Aided by Proteins 135

CONCEPT 7.4 Active transport uses energy to move solutes against their gradients 136

The Need for Energy in Active Transport 136

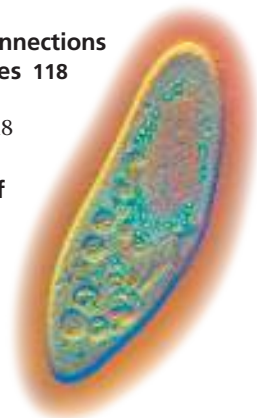

How Ion Pumps Maintain Membrane Potential 137

Cotransport: Coupled Transport by a Membrane Protein 138

CONCEPT 7.5 Bulk transport across the plasma membrane occurs by exocytosis and endocytosis 139

Exocytosis 139

Endocytosis 139

8 An Introduction to Metabolism 143

The Energy of Life 143

CONCEPT 8.1 An organism's metabolism transforms matter and energy, subject to the laws of thermodynamics 144

- Organization of the Chemistry of Life into Metabolic Pathways 144
- Forms of Energy 144
- The Laws of Energy Transformation 145

CONCEPT 8.2 The free-energy change of a reaction tells us whether or not the reaction occurs spontaneously 147

- Free-Energy Change, ΔG 147
- Free Energy, Stability, and Equilibrium 147
- Free Energy and Metabolism 148

CONCEPT 8.3 ATP powers cellular work by coupling exergonic reactions to endergonic reactions 150

- The Structure and Hydrolysis of ATP 150
- How the Hydrolysis of ATP Performs Work 151
- The Regeneration of ATP 153

CONCEPT 8.4 Enzymes speed up metabolic reactions by lowering energy barriers 153

- The Activation Energy Barrier 153
- How Enzymes Speed Up Reactions 154
- Substrate Specificity of Enzymes 155
- Catalysis in the Enzyme's Active Site 156
- Effects of Local Conditions on Enzyme Activity 157
- The Evolution of Enzymes 159

CONCEPT 8.5 Regulation of enzyme activity helps control metabolism 159

- Allosteric Regulation of Enzymes 160
- Localization of Enzymes Within the Cell 161

9 Cellular Respiration and Fermentation 164

Life Is Work 164

CONCEPT 9.1 Catabolic pathways yield energy by oxidizing organic fuels 165

- Catabolic Pathways and Production of ATP 165
- Redox Reactions: Oxidation and Reduction 165
- The Stages of Cellular Respiration: *A Preview* 168

CONCEPT 9.2 Glycolysis harvests chemical energy by oxidizing glucose to pyruvate 170

CONCEPT 9.3 After pyruvate is oxidized, the citric acid cycle completes the energy-yielding oxidation of organic molecules 171

- Oxidation of Pyruvate to Acetyl CoA 171
- The Citric Acid Cycle 172

CONCEPT 9.4 During oxidative phosphorylation, chemiosmosis couples electron transport to ATP synthesis 174

- The Pathway of Electron Transport 174
- Chemiosmosis: The Energy-Coupling Mechanism 175
- An Accounting of ATP Production by Cellular Respiration 177

CONCEPT 9.5 Fermentation and anaerobic respiration enable cells to produce ATP without the use of oxygen 179

- Types of Fermentation 180
- Comparing Fermentation with Anaerobic and Aerobic Respiration 181
- The Evolutionary Significance of Glycolysis 181

CONCEPT 9.6 Glycolysis and the citric acid cycle connect to many other metabolic pathways 182

- The Versatility of Catabolism 182
- Biosynthesis (Anabolic Pathways) 183
- Regulation of Cellular Respiration via Feedback Mechanisms 183

10 Photosynthesis 187

The Process That Feeds the Biosphere 187

CONCEPT 10.1 Photosynthesis converts light energy to the chemical energy of food 189

- Chloroplasts: The Sites of Photosynthesis in Plants 189
- Tracking Atoms Through Photosynthesis: *Scientific Inquiry* 190
- The Two Stages of Photosynthesis: *A Preview* 191

CONCEPT 10.2 The light reactions convert solar energy to the chemical energy of ATP and NADPH 192

- The Nature of Sunlight 192
- Photosynthetic Pigments: The Light Receptors 192
- Excitation of Chlorophyll by Light 195
- A Photosystem: A Reaction-Center Complex Associated with Light-Harvesting Complexes 195
- Linear Electron Flow 197
- Cyclic Electron Flow 198
- A Comparison of Chemiosmosis in Chloroplasts and Mitochondria 199

CONCEPT 10.3 The Calvin cycle uses the chemical energy of ATP and NADPH to reduce CO_2 to sugar 201

CONCEPT 10.4 Alternative mechanisms of carbon fixation have evolved in hot, arid climates 203

- Photorespiration: An Evolutionary Relic? 203
- C_4 Plants 203
- CAM Plants 205

CONCEPT 10.5 Life depends on photosynthesis 206

- The Importance of Photosynthesis: *A Review* 206

11 Cell Communication 212

Cellular Messaging 212

CONCEPT 11.1 External signals are converted to responses within the cell 213

- Evolution of Cell Signaling 213
- Local and Long-Distance Signaling 215
- The Three Stages of Cell Signaling: *A Preview* 216

CONCEPT 11.2 Reception: A signaling molecule binds to a receptor protein, causing it to change shape 217

- Receptors in the Plasma Membrane 217
- Intracellular Receptors 220

CONCEPT 11.3 Transduction: Cascades of molecular interactions relay signals from receptors to target molecules in the cell 221

- Signal Transduction Pathways 221
- Protein Phosphorylation and Dephosphorylation 222
- Small Molecules and Ions as Second Messengers 223

CONCEPT 11.4 Response: Cell signaling leads to regulation of transcription or cytoplasmic activities 226

- Nuclear and Cytoplasmic Responses 226
- Regulation of the Response 226

CONCEPT 11.5 Apoptosis integrates multiple cell-signaling pathways 229

- Apoptosis in the Soil Worm *Caenorhabditis elegans* 230
- Apoptotic Pathways and the Signals That Trigger Them 230

12 The Cell Cycle 234

The Key Roles of Cell Division 234

CONCEPT 12.1 Most cell division results in genetically identical daughter cells 235

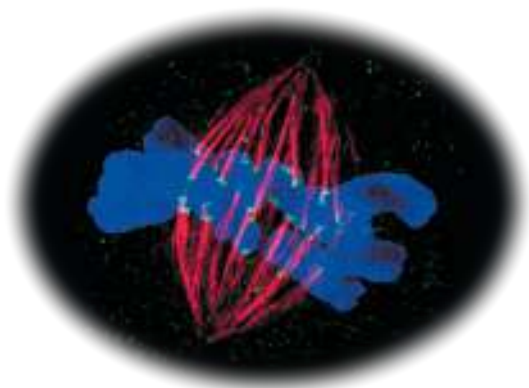

- Cellular Organization of the Genetic Material 235
- Distribution of Chromosomes During Eukaryotic Cell Division 236

CONCEPT 12.2 The mitotic phase alternates with interphase in the cell cycle 237

- Phases of the Cell Cycle 237
- The Mitotic Spindle: *A Closer Look* 237
- Cytokinesis: *A Closer Look* 241
- Binary Fission in Bacteria 242
- The Evolution of Mitosis 243

CONCEPT 12.3 The eukaryotic cell cycle is regulated by a molecular control system 244

- The Cell Cycle Control System 244
- Loss of Cell Cycle Controls in Cancer Cells 248

UNIT 3 GENETICS 253

Interview: Shirley Tilghman 253

13 Meiosis and Sexual Life Cycles 254

Variations on a Theme 254

CONCEPT 13.1 Offspring acquire genes from parents by inheriting chromosomes 255

- Inheritance of Genes 255
- Comparison of Asexual and Sexual Reproduction 255

CONCEPT 13.2 Fertilization and meiosis alternate in sexual life cycles 256

- Sets of Chromosomes in Human Cells 256
- Behavior of Chromosome Sets in the Human Life Cycle 257
- The Variety of Sexual Life Cycles 258

CONCEPT 13.3 Meiosis reduces the number of chromosome sets from diploid to haploid 259

- The Stages of Meiosis 259
- Crossing Over and Synapsis During Prophase I 262
- A Comparison of Mitosis and Meiosis 262

CONCEPT 13.4 Genetic variation produced in sexual life cycles contributes to evolution 265

- Origins of Genetic Variation Among Offspring 265
- The Evolutionary Significance of Genetic Variation Within Populations 266

14 Mendel and the Gene Idea 269

Drawing from the Deck of Genes 269

CONCEPT 14.1 Mendel used the scientific approach to identify two laws of inheritance 270

- Mendel's Experimental, Quantitative Approach 270
- The Law of Segregation 271
- The Law of Independent Assortment 274

CONCEPT 14.2 Probability laws govern Mendelian inheritance 276

- The Multiplication and Addition Rules Applied to Monohybrid Crosses 277
- Solving Complex Genetics Problems with the Rules of Probability 277

CONCEPT 14.3 Inheritance patterns are often more complex than predicted by simple Mendelian genetics 278

- Extending Mendelian Genetics for a Single Gene 278
- Extending Mendelian Genetics for Two or More Genes 281
- Nature and Nurture: The Environmental Impact on Phenotype 282
- A Mendelian View of Heredity and Variation 282

CONCEPT 14.4 Many human traits follow Mendelian patterns of inheritance 284

- Pedigree Analysis 284
- Recessively Inherited Disorders 285
- Dominantly Inherited Disorders 287
- Multifactorial Disorders 287
- Genetic Testing and Counseling 288

15 The Chromosomal Basis of Inheritance 294

Locating Genes Along Chromosomes 294

CONCEPT 15.1 Morgan showed that Mendelian inheritance has its physical basis in the behavior of chromosomes: *scientific inquiry* 296

- Morgan's Choice of Experimental Organism 296
- Correlating Behavior of a Gene's Alleles with Behavior of a Chromosome Pair 297

CONCEPT 15.2 Sex-linked genes exhibit unique patterns of inheritance 298

- The Chromosomal Basis of Sex 298
- Inheritance of X-Linked Genes 299
- X Inactivation in Female Mammals 300

CONCEPT 15.3 Linked genes tend to be inherited together because they are located near each other on the same chromosome 301

- How Linkage Affects Inheritance 301
- Genetic Recombination and Linkage 302
- Mapping the Distance Between Genes Using Recombination Data: *Scientific Inquiry* 305

CONCEPT 15.4 Alterations of chromosome number or structure cause some genetic disorders 306

- Abnormal Chromosome Number 307
- Alterations of Chromosome Structure 307
- Human Disorders Due to Chromosomal Alterations 308

CONCEPT 15.5 Some inheritance patterns are exceptions to standard Mendelian inheritance 310

- Genomic Imprinting 310
- Inheritance of Organelle Genes 311

16 The Molecular Basis of Inheritance 314

Life's Operating Instructions 314

CONCEPT 16.1 DNA is the genetic material 315

- The Search for the Genetic Material: *Scientific Inquiry* 315
- Building a Structural Model of DNA: *Scientific Inquiry* 317

CONCEPT 16.2 Many proteins work together in DNA replication and repair 320

- The Basic Principle: Base Pairing to a Template Strand 320
- DNA Replication: *A Closer Look* 322
- Proofreading and Repairing DNA 327
- Evolutionary Significance of Altered DNA Nucleotides 328
- Replicating the Ends of DNA Molecules 328

CONCEPT 16.3 A chromosome consists of a DNA molecule packed together with proteins 330

17 Gene Expression: From Gene to Protein 335

The Flow of Genetic Information 335

CONCEPT 17.1 Genes specify proteins via transcription and translation 336

- Evidence from Studying Metabolic Defects 336
- Basic Principles of Transcription and Translation 338
- The Genetic Code 339

CONCEPT 17.2 Transcription is the DNA-directed synthesis of RNA: *a closer look* 342

- Molecular Components of Transcription 342
- Synthesis of an RNA Transcript 342

CONCEPT 17.3 Eukaryotic cells modify RNA after transcription 345

- Alteration of mRNA Ends 345
- Split Genes and RNA Splicing 345

CONCEPT 17.4 Translation is the RNA-directed synthesis of a polypeptide: *a closer look* 347

- Molecular Components of Translation 348
- Building a Polypeptide 350
- Completing and Targeting the Functional Protein 352
- Making Multiple Polypeptides in Bacteria and Eukaryotes 355

CONCEPT 17.5 Mutations of one or a few nucleotides can affect protein structure and function 357

- Types of Small-Scale Mutations 357
- New Mutations and Mutagens 360
- What Is a Gene? *Revisiting the Question* 360

18 Regulation of Gene Expression 363

Beauty in the Eye of the Beholder 363

CONCEPT 18.1 Bacteria often respond to environmental change by regulating transcription 364

- Operons: The Basic Concept 364
- Repressible and Inducible Operons: Two Types of Negative Gene Regulation 366
- Positive Gene Regulation 367

CONCEPT 18.2 Eukaryotic gene expression is regulated at many stages 368

- Differential Gene Expression 368
- Regulation of Chromatin Structure 369
- Regulation of Transcription Initiation 370
- Mechanisms of Post-Transcriptional Regulation 375

CONCEPT 18.3 Noncoding RNAs play multiple roles in controlling gene expression 377

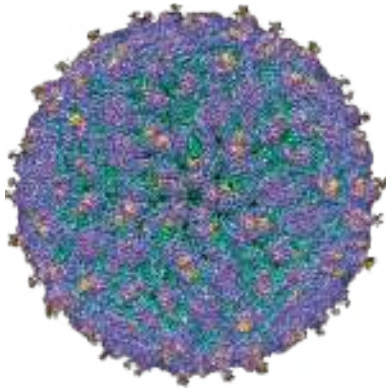

- Effects on mRNAs by MicroRNAs and Small Interfering RNAs 377
- Chromatin Remodeling and Effects on Transcription by ncRNAs 378
- The Evolutionary Significance of Small ncRNAs 379

CONCEPT 18.4 A program of differential gene expression leads to the different cell types in a multicellular organism 379

- A Genetic Program for Embryonic Development 379
- Cytoplasmic Determinants and Inductive Signals 380
- Sequential Regulation of Gene Expression During Cellular Differentiation 381
- Pattern Formation: Setting Up the Body Plan 382

CONCEPT 18.5 Cancer results from genetic changes that affect cell cycle control 386

- Types of Genes Associated with Cancer 386
- Interference with Normal Cell-Signaling Pathways 387
- The Multistep Model of Cancer Development 389
- Inherited Predisposition and Environmental Factors Contributing to Cancer 392
- The Role of Viruses in Cancer 392

19 Viruses 396

A Borrowed Life 396

CONCEPT 19.1 A virus consists of a nucleic acid surrounded by a protein coat 397

The Discovery of Viruses: *Scientific Inquiry* 397
Structure of Viruses 397

CONCEPT 19.2 Viruses replicate only in host cells 399

General Features of Viral Replicative Cycles 399
Replicative Cycles of Phages 400
Replicative Cycles of Animal Viruses 402
Evolution of Viruses 404

CONCEPT 19.3 Viruses and prions are formidable pathogens in animals and plants 406

Viral Diseases in Animals 406
Emerging Viruses 407
Viral Diseases in Plants 410
Prions: Proteins as Infectious Agents 410

20 DNA Tools and Biotechnology 413

The DNA Toolbox 413

CONCEPT 20.1 DNA sequencing and DNA cloning are valuable tools for genetic engineering and biological inquiry 414

DNA Sequencing 414
Making Multiple Copies of a Gene or Other DNA Segment 416
Using Restriction Enzymes to Make a Recombinant DNA Plasmid 417
Amplifying DNA: The Polymerase Chain Reaction (PCR) and Its Use in DNA Cloning 418
Expressing Cloned Eukaryotic Genes 420

CONCEPT 20.2 Biologists use DNA technology to study gene expression and function 421

Analyzing Gene Expression 421
Determining Gene Function 424

CONCEPT 20.3 Cloned organisms and stem cells are useful for basic research and other applications 426

Cloning Plants: Single-Cell Cultures 427
Cloning Animals: Nuclear Transplantation 427
Stem Cells of Animals 429

CONCEPT 20.4 The practical applications of DNA-based biotechnology affect our lives in many ways 431

Medical Applications 431
Forensic Evidence and Genetic Profiles 434
Environmental Cleanup 435
Agricultural Applications 436
Safety and Ethical Questions Raised by DNA Technology 436

21 Genomes and Their Evolution 440

Reading the Leaves from the Tree of Life 440

CONCEPT 21.1 The Human Genome Project fostered development of faster, less expensive sequencing techniques 441

CONCEPT 21.2 Scientists use bioinformatics to analyze genomes and their functions 442

Centralized Resources for Analyzing Genome Sequences 442
Identifying Protein-Coding Genes and Understanding Their Functions 443
Understanding Genes and Gene Expression at the Systems Level 444

CONCEPT 21.3 Genomes vary in size, number of genes, and gene density 446

Genome Size 446
Number of Genes 447
Gene Density and Noncoding DNA 447

CONCEPT 21.4 Multicellular eukaryotes have a lot of noncoding DNA and many multigene families 448

Transposable Elements and Related Sequences 449
Other Repetitive DNA, Including Simple Sequence DNA 450
Genes and Multigene Families 450

CONCEPT 21.5 Duplication, rearrangement, and mutation of DNA contribute to genome evolution 452

Duplication of Entire Chromosome Sets 452
Alterations of Chromosome Structure 452
Duplication and Divergence of Gene-Sized Regions of DNA 453
Rearrangements of Parts of Genes: Exon Duplication and Exon Shuffling 454
How Transposable Elements Contribute to Genome Evolution 457

CONCEPT 21.6 Comparing genome sequences provides clues to evolution and development 457

Comparing Genomes 457
Widespread Conservation of Developmental Genes Among Animals 461

UNIT 4 MECHANISMS OF EVOLUTION 465

Interview: Jack Szostak 465

22 Descent With Modification: A Darwinian View of Life 466

Endless Forms Most Beautiful 466

CONCEPT 22.1 The Darwinian revolution challenged traditional views of a young Earth inhabited by unchanging species 467

Scala Naturae and Classification of Species 468
Ideas About Change over Time 468
Lamarck's Hypothesis of Evolution 468

CONCEPT 22.2 Descent with modification by natural selection explains the adaptations of organisms and the unity and diversity of life 469

Darwin's Research 469
Ideas from *The Origin of Species* 471
Key Features of Natural Selection 474

CONCEPT 22.3 Evolution is supported by an overwhelming amount of scientific evidence 475

Direct Observations of Evolutionary Change 475
Homology 477
The Fossil Record 479
Biogeography 480
What Is Theoretical About Darwin's View of Life? 481

23 The Evolution of Populations 484

The Smallest Unit of Evolution 484

CONCEPT 23.1 Genetic variation makes evolution possible 485

Genetic Variation 485
Sources of Genetic Variation 486

CONCEPT 23.2 The Hardy-Weinberg equation can be used to test whether a population is evolving 487

Gene Pools and Allele Frequencies 488
The Hardy-Weinberg Equation 488

CONCEPT 23.3 Natural selection, genetic drift, and gene flow can alter allele frequencies in a population 491

Natural Selection 492
Genetic Drift 492
Case Study: Impact of Genetic Drift on the Greater Prairie Chicken 493
Effects of Genetic Drift: *A Summary* 494
Gene Flow 494

CONCEPT 23.4 Natural selection is the only mechanism that consistently causes adaptive evolution 495

Natural Selection: *A Closer Look* 495
The Key Role of Natural Selection in Adaptive Evolution 497

Sexual Selection 497
Balancing Selection 498
Why Natural Selection Cannot Fashion Perfect Organisms 499

24 The Origin of Species 504

That "Mystery of Mysteries" 504

CONCEPT 24.1 The biological species concept emphasizes reproductive isolation 505

The Biological Species Concept 505
Other Definitions of Species 508

CONCEPT 24.2 Speciation can take place with or without geographic separation 509

Allopatric ("Other Country") Speciation 509
Sympatric ("Same Country") Speciation 511
Allopatric and Sympatric Speciation: *A Review* 514

CONCEPT 24.3 Hybrid zones reveal factors that cause reproductive isolation 514

Patterns Within Hybrid Zones 514
Hybrid Zones and Environmental Change 515
Hybrid Zones over Time 515

CONCEPT 24.4 Speciation can occur rapidly or slowly and can result from changes in few or many genes 518

The Time Course of Speciation 518
Studying the Genetics of Speciation 520
From Speciation to Macroevolution 521

25 The History of Life on Earth 523

A Surprise in the Desert 523

CONCEPT 25.1 Conditions on early Earth made the origin of life possible 524

Synthesis of Organic Compounds on Early Earth 524
Abiotic Synthesis of Macromolecules 525
Protocells 525
Self-Replicating RNA 526

CONCEPT 25.2 The fossil record documents the history of life 526

The Fossil Record 526
How Rocks and Fossils Are Dated 528
The Origin of New Groups of Organisms 528

CONCEPT 25.3 Key events in life's history include the origins of unicellular and multicellular organisms and the colonization of land 530

The First Single-Celled Organisms 532
The Origin of Multicellularity 533
The Colonization of Land 534

CONCEPT 25.4 The rise and fall of groups of organisms reflect differences in speciation and extinction rates 535

Plate Tectonics 536
Mass Extinctions 538
Adaptive Radiations 540

CONCEPT 25.5 Major changes in body form can result from changes in the sequences and regulation of developmental genes 542

Effects of Developmental Genes 542
The Evolution of Development 543

CONCEPT 25.6 Evolution is not goal oriented 545

Evolutionary Novelties 545
Evolutionary Trends 546

UNIT 5 THE EVOLUTIONARY HISTORY OF BIOLOGICAL DIVERSITY 550

Interview: Nancy Moran 550

26 Phylogeny and the Tree of Life 551

Investigating the Tree of Life 551

CONCEPT 26.1 Phylogenies show evolutionary relationships 552

- Binomial Nomenclature 552
- Hierarchical Classification 552
- Linking Classification and Phylogeny 553
- What We Can and Cannot Learn from Phylogenetic Trees 553
- Applying Phylogenies 555

CONCEPT 26.2 Phylogenies are inferred from morphological and molecular data 556

- Morphological and Molecular Homologies 556
- Sorting Homology from Analogy 556
- Evaluating Molecular Homologies 556

CONCEPT 26.3 Shared characters are used to construct phylogenetic trees 557

- Cladistics 557
- Phylogenetic Trees with Proportional Branch Lengths 559
- Maximum Parsimony and Maximum Likelihood 560
- Phylogenetic Trees as Hypotheses 562

CONCEPT 26.4 An organism's evolutionary history is documented in its genome 563

- Gene Duplications and Gene Families 563
- Genome Evolution 564

CONCEPT 26.5 Molecular clocks help track evolutionary time 564

- Molecular Clocks 564
- Applying a Molecular Clock: Dating the Origin of HIV 565

CONCEPT 26.6 Our understanding of the tree of life continues to change based on new data 566

- From Two Kingdoms to Three Domains 566
- The Important Role of Horizontal Gene Transfer 566

27 Bacteria and Archaea 571

Masters of Adaptation 571

CONCEPT 27.1 Structural and functional adaptations contribute to prokaryotic success 572

- Cell-Surface Structures 572
- Motility 574
- Internal Organization and DNA 575
- Reproduction 575

CONCEPT 27.2 Rapid reproduction, mutation, and genetic recombination promote genetic diversity in prokaryotes 576

- Rapid Reproduction and Mutation 576
- Genetic Recombination 577

CONCEPT 27.3 Diverse nutritional and metabolic adaptations have evolved in prokaryotes 579

- The Role of Oxygen in Metabolism 579
- Nitrogen Metabolism 579
- Metabolic Cooperation 580

CONCEPT 27.4 Prokaryotes have radiated into a diverse set of lineages 581

- An Overview of Prokaryotic Diversity 581
- Bacteria 581
- Archaea 584

CONCEPT 27.5 Prokaryotes play crucial roles in the biosphere 585

- Chemical Recycling 585
- Ecological Interactions 586

CONCEPT 27.6 Prokaryotes have both beneficial and harmful impacts on humans 586

- Mutualistic Bacteria 586
- Pathogenic Bacteria 586
- Prokaryotes in Research and Technology 587

28 Protists 591

Living Small 591

CONCEPT 28.1 Most eukaryotes are single-celled organisms 592

- Structural and Functional Diversity in Protists 592
- Four Supergroups of Eukaryotes 592
- Endosymbiosis in Eukaryotic Evolution 593

CONCEPT 28.2 Excavates include protists with modified mitochondria and protists with unique flagella 597

- Diplomonads and Parabasalids 597
- Euglenozoans 598

CONCEPT 28.3 SAR is a highly diverse group of protists defined by DNA similarities 599

- Stramenopiles 599
- Alveolates 602
- Rhizarians 605

CONCEPT 28.4 Red algae and green algae are the closest relatives of plants 606

- Red Algae 606
- Green Algae 607

CONCEPT 28.5 Unikonts include protists that are closely related to fungi and animals 608

- Amoebozoans 609
- Opisthokonts 611

CONCEPT 28.6 Protists play key roles in ecological communities 612

- Symbiotic Protists 612
- Photosynthetic Protists 612

29 Plant Diversity I: How Plants Colonized Land 616

The Greening of Earth 616

CONCEPT 29.1 Plants evolved from green algae 617

- Morphological and Molecular Evidence 617
- Adaptations Enabling the Move to Land 617
- Derived Traits of Plants 617
- The Origin and Diversification of Plants 620

CONCEPT 29.2 Mosses and other nonvascular plants have life cycles dominated by gametophytes 622

- Bryophyte Gametophytes 622
- Bryophyte Sporophytes 625
- The Ecological and Economic Importance of Mosses 625

CONCEPT 29.3 Ferns and other seedless vascular plants were the first plants to grow tall 626

- Origins and Traits of Vascular Plants 626
- Classification of Seedless Vascular Plants 629
- The Significance of Seedless Vascular Plants 631

30 Plant Diversity II: The Evolution of Seed Plants 634

Transforming the World 634

CONCEPT 30.1 Seeds and pollen grains are key adaptations for life on land 635

- Advantages of Reduced Gametophytes 635
- Heterospory: The Rule Among Seed Plants 636
- Ovules and Production of Eggs 636
- Pollen and Production of Sperm 636
- The Evolutionary Advantage of Seeds 636

CONCEPT 30.2 Gymnosperms bear “naked” seeds, typically on cones 637

- The Life Cycle of a Pine 638
- Early Seed Plants and the Rise of Gymnosperms 639
- Gymnosperm Diversity 639

CONCEPT 30.3 The reproductive adaptations of angiosperms include flowers and fruits 642

- Characteristics of Angiosperms 642
- Angiosperm Evolution 645
- Angiosperm Diversity 647

CONCEPT 30.4 Human welfare depends on seed plants 649

- Products from Seed Plants 649
- Threats to Plant Diversity 649

31 Fungi 652

Hidden Networks 652

CONCEPT 31.1 Fungi are heterotrophs that feed by absorption 653

- Nutrition and Ecology 653
- Body Structure 653
- Specialized Hyphae in Mycorrhizal Fungi 654

CONCEPT 31.2 Fungi produce spores through sexual or asexual life cycles 655

- Sexual Reproduction 656
- Asexual Reproduction 656

CONCEPT 31.3 The ancestor of fungi was an aquatic, single-celled, flagellated protist 657

- The Origin of Fungi 657
- Basal Fungal Groups 658
- The Move to Land 658

CONCEPT 31.4 Fungi have radiated into a diverse set of lineages 658

- Chytrids 658
- Zygomycetes 660
- Glomeromycetes 661
- Ascomycetes 661
- Basidiomycetes 663

CONCEPT 31.5 Fungi play key roles in nutrient cycling, ecological interactions, and human welfare 665

- Fungi as Decomposers 665
- Fungi as Mutualists 665
- Fungi as Parasites 667
- Practical Uses of Fungi 668

32 An Overview of Animal Diversity 671

A Kingdom of Consumers 671

CONCEPT 32.1 Animals are multicellular, heterotrophic eukaryotes with tissues that develop from embryonic layers 672

- Nutritional Mode 672
- Cell Structure and Specialization 672
- Reproduction and Development 672

CONCEPT 32.2 The history of animals spans more than half a billion years 673

- Steps in the Origin of Multicellular Animals 673
- Neoproterozoic Era (1 Billion–541 Million Years Ago) 674
- Paleozoic Era (541–252 Million Years Ago) 675
- Mesozoic Era (252–66 Million Years Ago) 677
- Cenozoic Era (66 Million Years Ago to the Present) 677

CONCEPT 32.3 Animals can be characterized by “body plans” 677

- Symmetry 677
- Tissues 678
- Body Cavities 678
- Protostome and Deuterostome Development 679

CONCEPT 32.4 Views of animal phylogeny continue to be shaped by new molecular and morphological data 680

- The Diversification of Animals 680
- Future Directions in Animal Systematics 681

33 An Introduction to Invertebrates 684

A Dragon Without a Backbone 684

CONCEPT 33.1 Sponges are basal animals that lack tissues 688

CONCEPT 33.2 Cnidarians are an ancient phylum of eumetazoans 689

Medusozoans 690

Anthozoans 691

CONCEPT 33.3 Lophotrochozoans, a clade identified by molecular data, have the widest range of animal body forms 692

Flatworms 692

Rotifers and Acanthocephalans 695

Lophophorates: Ectoprocts and Brachiopods 696

Molluscs 697

Annelids 701

CONCEPT 33.4 Ecdysozoans are the most species-rich animal group 703

Nematodes 703

Arthropods 704

CONCEPT 33.5 Echinoderms and chordates are deuterostomes 711

Echinoderms 711

Chordates 713

34 The Origin and Evolution of Vertebrates 716

Half a Billion Years of Backbones 716

CONCEPT 34.1 Chordates have a notochord and a dorsal, hollow nerve cord 717

Derived Characters of Chordates 717

Lancelets 718

Tunicates 719

Early Chordate Evolution 720

CONCEPT 34.2 Vertebrates are chordates that have a backbone 720

Derived Characters of Vertebrates 720

Hagfishes and Lampreys 721

Early Vertebrate Evolution 722

CONCEPT 34.3 Gnathostomes are vertebrates that have jaws 723

Derived Characters of Gnathostomes 723

Fossil Gnathostomes 724

Chondrichthyans (Sharks, Rays, and Their Relatives) 724

Ray-Finned Fishes and Lobe-Fins 726

CONCEPT 34.4 Tetrapods are gnathostomes that have limbs 728

Derived Characters of Tetrapods 728

The Origin of Tetrapods 729

Amphibians 729

CONCEPT 34.5 Amniotes are tetrapods that have a terrestrially adapted egg 732

Derived Characters of Amniotes 732

Early Amniotes 733

Reptiles 733

CONCEPT 34.6 Mammals are amniotes that have hair and produce milk 738

Derived Characters of Mammals 739

Early Evolution of Mammals 739

Monotremes 740

Marsupials 740

Eutherians (Placental Mammals) 741

CONCEPT 34.7 Humans are mammals that have a large brain and bipedal locomotion 746

Derived Characters of Humans 746

The Earliest Hominins 747

Australopiths 747

Bipedalism 748

Tool Use 748

Neanderthals 750

UNIT 6 PLANT FORM AND FUNCTION 755

Interview: Philip Benfey 755

35 Vascular Plant Structure, Growth, and Development 756

Are Plants Computers? 756

CONCEPT 35.1 Plants have a hierarchical organization consisting of organs, tissues, and cells 757

Basic Vascular Plant Organs: Roots, Stems, and Leaves 757

Dermal, Vascular, and Ground Tissues 760

Common Types of Plant Cells 761

CONCEPT 35.2 Different meristems generate new cells for primary and secondary growth 764

CONCEPT 35.3 Primary growth lengthens roots and shoots 766

Primary Growth of Roots 766

Primary Growth of Shoots 767

CONCEPT 35.4 Secondary growth increases the diameter of stems and roots in woody plants 770

The Vascular Cambium and Secondary Vascular Tissue 771

The Cork Cambium and the Production of Periderm 772

Evolution of Secondary Growth 772

CONCEPT 35.5 Growth, morphogenesis, and cell differentiation produce the plant body 773

Model Organisms: Revolutionizing the Study of Plants 774

Growth: Cell Division and Cell Expansion 774

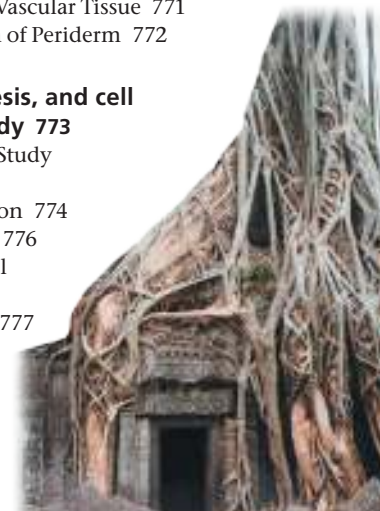

Morphogenesis and Pattern Formation 776

Gene Expression and the Control of Cell

Differentiation 776

Shifts in Development: Phase Changes 777

Genetic Control of Flowering 778

36 Resource Acquisition and Transport in Vascular Plants 782

A Whole Lot of Shaking Going On 782

CONCEPT 36.1 Adaptations for acquiring resources were key steps in the evolution of vascular plants 783

Shoot Architecture and Light Capture 783

Root Architecture and Acquisition of Water and Minerals 785

CONCEPT 36.2 Different mechanisms transport substances over short or long distances 785

The Apoplast and Symplast: Transport Continuums 785

Short-Distance Transport of Solutes Across Plasma Membranes 786

Short-Distance Transport of Water Across Plasma Membranes 786

Long-Distance Transport: The Role of Bulk Flow 789

CONCEPT 36.3 Transpiration drives the transport of water and minerals from roots to shoots via the xylem 790

Absorption of Water and Minerals by Root Cells 790

Transport of Water and Minerals into the Xylem 790

Bulk Flow Transport via the Xylem 790

Xylem Sap Ascent by Bulk Flow: *A Review* 794

CONCEPT 36.4 The rate of transpiration is regulated by stomata 794

Stomata: Major Pathways for Water Loss 795

Mechanisms of Stomatal Opening and Closing 795

Stimuli for Stomatal Opening and Closing 796

Effects of Transpiration on Wilting and Leaf Temperature 796

Adaptations That Reduce Evaporative Water Loss 796

CONCEPT 36.5 Sugars are transported from sources to sinks via the phloem 797

Movement from Sugar Sources to Sugar Sinks 797

Bulk Flow by Positive Pressure: The Mechanism of Translocation in Angiosperms 798

CONCEPT 36.6 The symplast is highly dynamic 799

Changes in Plasmodesmatal Number and Pore Size 800

Phloem: An Information Superhighway 800

Electrical Signaling in the Phloem 800

37 Soil and Plant Nutrition 803

The Corkscrew Carnivore 803

CONCEPT 37.1 Soil contains a living, complex ecosystem 804

Soil Texture 804

Topsoil Composition 804

Soil Conservation and Sustainable Agriculture 805

CONCEPT 37.2 Plant roots absorb essential elements from the soil 807

Essential Elements 807

Symptoms of Mineral Deficiency 808

Improving Plant Nutrition by Genetic Modification 809

CONCEPT 37.3 Plant nutrition often involves relationships with other organisms 810

Bacteria and Plant Nutrition 812

Fungi and Plant Nutrition 815

Epiphytes, Parasitic Plants, and Carnivorous Plants 816

38 Angiosperm Reproduction and Biotechnology 820

Flowers of Deceit 820

CONCEPT 38.1 Flowers, double fertilization, and fruits are key features of the angiosperm life cycle 821

Flower Structure and Function 821

Methods of Pollination 823

The Angiosperm Life Cycle: An Overview 824

Seed Development and Structure: *A Closer Look* 826

Sporophyte Development from Seed to Mature Plant 827

Fruit Structure and Function 828

CONCEPT 38.2 Flowering plants reproduce sexually, asexually, or both 831

Mechanisms of Asexual Reproduction 831

Advantages and Disadvantages of Asexual and Sexual Reproduction 831

Mechanisms That Prevent Self-Fertilization 832

Totipotency, Vegetative Reproduction, and Tissue Culture 833

CONCEPT 38.3 People modify crops by breeding and genetic engineering 834

Plant Breeding 835

Plant Biotechnology and Genetic Engineering 835

The Debate over Plant Biotechnology 837

39 Plant Responses to Internal and External Signals 840

Stimuli and a Stationary Life 840

CONCEPT 39.1 Signal transduction pathways link signal reception to response 841

Reception 842

Transduction 842

Response 843

CONCEPT 39.2 Plant hormones help coordinate growth, development, and responses to stimuli 844

A Survey of Plant Hormones 845

CONCEPT 39.3 Responses to light are critical for plant success 853

Blue-Light Photoreceptors 853

Phytochrome Photoreceptors 854

Biological Clocks and Circadian Rhythms 855

The Effect of Light on the Biological Clock 856

Photoperiodism and Responses to Seasons 857

CONCEPT 39.4 Plants respond to a wide variety of stimuli other than light 859

Gravity 859

Mechanical Stimuli 859

Environmental Stresses 860

CONCEPT 39.5 Plants respond to attacks by pathogens and herbivores 864

Defenses Against Pathogens 864

Defenses Against Herbivores 865

Interview: Harald zur Hausen 870

40 Basic Principles of Animal Form and Function 871

Diverse Forms, Common Challenges 871**CONCEPT 40.1** Animal form and function are correlated at all levels of organization 872

- Evolution of Animal Size and Shape 872
- Exchange with the Environment 872
- Hierarchical Organization of Body Plans 874
- Coordination and Control 878

CONCEPT 40.2 Feedback control maintains the internal environment in many animals 879

- Regulating and Conforming 879
- Homeostasis 879

CONCEPT 40.3 Homeostatic processes for thermoregulation involve form, function, and behavior 882

- Endothermy and Ectothermy 882
- Variation in Body Temperature 882
- Balancing Heat Loss and Gain 883
- Acclimatization in Thermoregulation 886
- Physiological Thermostats and Fever 886

CONCEPT 40.4 Energy requirements are related to animal size, activity, and environment 887

- Energy Allocation and Use 887
- Quantifying Energy Use 888
- Minimum Metabolic Rate and Thermoregulation 888
- Influences on Metabolic Rate 889
- Torpor and Energy Conservation 890

41 Animal Nutrition 896

The Need to Feed 896**CONCEPT 41.1** An animal's diet must supply chemical energy, organic building blocks, and essential nutrients 897

- Essential Nutrients 897
- Dietary Deficiencies 899
- Assessing Nutritional Needs 900

CONCEPT 41.2 Food processing involves ingestion, digestion, absorption, and elimination 900

- Digestive Compartments 902

CONCEPT 41.3 Organs specialized for sequential stages of food processing form the mammalian digestive system 903

- The Oral Cavity, Pharynx, and Esophagus 903
- Digestion in the Stomach 905
- Digestion in the Small Intestine 906
- Absorption in the Small Intestine 907
- Processing in the Large Intestine 908

CONCEPT 41.4 Evolutionary adaptations of vertebrate digestive systems correlate with diet 909

- Dental Adaptations 909
- Stomach and Intestinal Adaptations 910
- Mutualistic Adaptations 910

CONCEPT 41.5 Feedback circuits regulate digestion, energy storage, and appetite 912

- Regulation of Digestion 913
- Regulation of Energy Storage 913
- Regulation of Appetite and Consumption 915

42 Circulation and Gas Exchange 919

Trading Places 919**CONCEPT 42.1** Circulatory systems link exchange surfaces with cells throughout the body 920

- Gastrovascular Cavities 920
- Open and Closed Circulatory Systems 921
- Organization of Vertebrate Circulatory Systems 922

CONCEPT 42.2 Coordinated cycles of heart contraction drive double circulation in mammals 924

- Mammalian Circulation 924
- The Mammalian Heart: *A Closer Look* 924
- Maintaining the Heart's Rhythmic Beat 926

CONCEPT 42.3 Patterns of blood pressure and flow reflect the structure and arrangement of blood vessels 927

- Blood Vessel Structure and Function 927
- Blood Flow Velocity 928
- Blood Pressure 928
- Capillary Function 930
- Fluid Return by the Lymphatic System 931

CONCEPT 42.4 Blood components function in exchange, transport, and defense 932

- Blood Composition and Function 932
- Cardiovascular Disease 935

CONCEPT 42.5 Gas exchange occurs across specialized respiratory surfaces 937

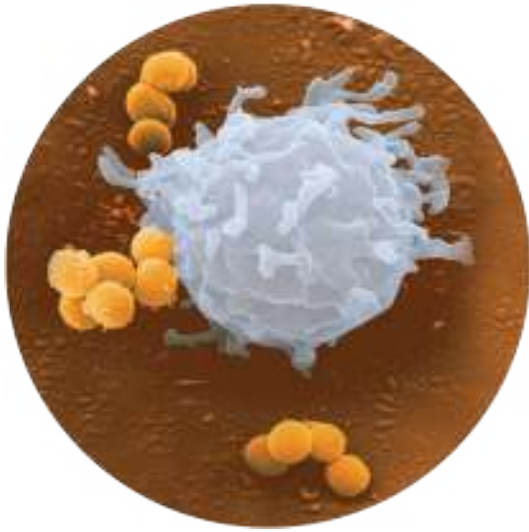

- Partial Pressure Gradients in Gas Exchange 937
- Respiratory Media 937
- Respiratory Surfaces 938
- Gills in Aquatic Animals 938
- Tracheal Systems in Insects 939
- Lungs 940

CONCEPT 42.6 Breathing ventilates the lungs 942

- How an Amphibian Breathes 942
- How a Bird Breathes 942
- How a Mammal Breathes 943
- Control of Breathing in Humans 944

CONCEPT 42.7 Adaptations for gas exchange include pigments that bind and transport gases 945

- Coordination of Circulation and Gas Exchange 945
- Respiratory Pigments 945
- Respiratory Adaptations of Diving Mammals 947

43 The Immune System 950

Recognition and Response 950

CONCEPT 43.1 In innate immunity, recognition and response rely on traits common to groups of pathogens 951

Innate Immunity of Invertebrates 951

Innate Immunity of Vertebrates 953

Evasion of Innate Immunity by Pathogens 956

CONCEPT 43.2 In adaptive immunity, receptors provide pathogen-specific recognition 956

Antigen Recognition by B Cells and Antibodies 956

Antigen Recognition by T Cells 957

B Cell and T Cell Development 958

CONCEPT 43.3 Adaptive immunity defends against infection of body fluids and body cells 961

Helper T Cells: Activating Adaptive Immunity 961

B Cells and Antibodies: A Response to Extracellular

Pathogens 962

Cytotoxic T Cells: A Response to Infected Host Cells 964

Summary of the Humoral and Cell-Mediated Immune

Responses 965

Immunization 966

Active and Passive Immunity 966

Antibodies as Tools 967

Immune Rejection 967

CONCEPT 43.4 Disruptions in immune system function can elicit or exacerbate disease 968

Exaggerated, Self-Directed, and Diminished Immune Responses 968

Evolutionary Adaptations of Pathogens That Underlie Immune System Avoidance 970

Cancer and Immunity 972

44 Osmoregulation and Excretion 975

A Balancing Act 975

CONCEPT 44.1 Osmoregulation balances the uptake and loss of water and solutes 976

Osmosis and Osmolarity 976

Osmoregulatory Challenges and Mechanisms 976

Energetics of Osmoregulation 978

Transport Epithelia in Osmoregulation 979

CONCEPT 44.2 An animal's nitrogenous wastes reflect its phylogeny and habitat 980

Forms of Nitrogenous Waste 980

The Influence of Evolution and Environment on Nitrogenous Wastes 981

CONCEPT 44.3 Diverse excretory systems are variations on a tubular theme 982

Excretory Processes 982

Survey of Excretory Systems 982

CONCEPT 44.4 The nephron is organized for stepwise processing of blood filtrate 985

From Blood Filtrate to Urine: *A Closer Look* 986

Solute Gradients and Water Conservation 987

Adaptations of the Vertebrate Kidney to Diverse Environments 989

CONCEPT 44.5 Hormonal circuits link kidney function, water balance, and blood pressure 992

Homeostatic Regulation of the Kidney 992

45 Hormones and the Endocrine System 997

The Body's Long-Distance Regulators 997

CONCEPT 45.1 Hormones and other signaling molecules bind to target receptors, triggering specific response pathways 998

Intercellular Communication 998

Chemical Classes of Local Regulators and Hormones 999

Cellular Hormone Response Pathways 1000

Endocrine Tissues and Organs 1002

CONCEPT 45.2 Feedback regulation and coordination with the nervous system are common in hormone pathways 1003

Simple Endocrine Pathways 1003

Simple Neuroendocrine Pathways 1003

Feedback Regulation 1004

Coordination of Endocrine and Nervous Systems 1004

Thyroid Regulation: A Hormone Cascade Pathway 1007

Hormonal Regulation of Growth 1007

CONCEPT 45.3 Endocrine glands respond to diverse stimuli in regulating homeostasis, development, and behavior 1009

Parathyroid Hormone and Vitamin D: Control of Blood Calcium 1009

Adrenal Hormones: Response to Stress 1010

Sex Hormones 1012

Hormones and Biological Rhythms 1013

Evolution of Hormone Function 1013

46 Animal Reproduction 1017

Let Me Count the Ways 1017

CONCEPT 46.1 Both asexual and sexual reproduction occur in the animal kingdom 1018

- Mechanisms of Asexual Reproduction 1018
- Variation in Patterns of Sexual Reproduction 1018
- Reproductive Cycles 1019
- Sexual Reproduction: An Evolutionary Enigma 1019

CONCEPT 46.2 Fertilization depends on mechanisms that bring together sperm and eggs of the same species 1020

- Ensuring the Survival of Offspring 1021
- Gamete Production and Delivery 1021

CONCEPT 46.3 Reproductive organs produce and transport gametes 1023

- Human Male Reproductive Anatomy 1023
- Human Female Reproductive Anatomy 1024
- Gametogenesis 1025

CONCEPT 46.4 The interplay of tropic and sex hormones regulates reproduction in mammals 1028

- Hormonal Control of the Male Reproductive System 1029
- Hormonal Control of Female Reproductive Cycles 1029
- Human Sexual Response 1031

CONCEPT 46.5 In placental mammals, an embryo develops fully within the mother's uterus 1032

- Conception, Embryonic Development, and Birth 1032
- Maternal Immune Tolerance of the Embryo and Fetus 1035
- Contraception and Abortion 1036
- Modern Reproductive Technologies 1037

47 Animal Development 1041

A Body-Building Plan 1041

CONCEPT 47.1 Fertilization and cleavage initiate embryonic development 1042

- Fertilization 1042
- Cleavage 1045

CONCEPT 47.2 Morphogenesis in animals involves specific changes in cell shape, position, and survival 1047

- Gastrulation 1047
- Developmental Adaptations of Amniotes 1051
- Organogenesis 1052
- The Cytoskeleton in Morphogenesis 1054

CONCEPT 47.3 Cytoplasmic determinants and inductive signals regulate cell fate 1055

- Fate Mapping 1056
- Axis Formation 1057
- Restricting Developmental Potential 1058
- Cell Fate Determination and Pattern Formation by Inductive Signals 1059
- Cilia and Cell Fate 1062

48 Neurons, Synapses, and Signaling 1065

Lines of Communication 1065

CONCEPT 48.1 Neuron structure and organization reflect function in information transfer 1066

- Neuron Structure and Function 1066
- Introduction to Information Processing 1066

CONCEPT 48.2 Ion pumps and ion channels establish the resting potential of a neuron 1068

- Formation of the Resting Potential 1068
- Modeling the Resting Potential 1069

CONCEPT 48.3 Action potentials are the signals conducted by axons 1070

- Hyperpolarization and Depolarization 1070
- Graded Potentials and Action Potentials 1071
- Generation of Action Potentials: *A Closer Look* 1072
- Conduction of Action Potentials 1073

CONCEPT 48.4 Neurons communicate with other cells at synapses 1075

- Generation of Postsynaptic Potentials 1076
- Summation of Postsynaptic Potentials 1077
- Termination of Neurotransmitter Signaling 1078
- Modulated Signaling at Synapses 1078
- Neurotransmitters 1078

49 Nervous Systems 1083

Command and Control Center 1083

CONCEPT 49.1 Nervous systems consist of circuits of neurons and supporting cells 1084

- Glia 1085
- Organization of the Vertebrate Nervous System 1086
- The Peripheral Nervous System 1087

CONCEPT 49.2 The vertebrate brain is regionally specialized 1089

- Arousal and Sleep 1092
- Biological Clock Regulation 1092
- Emotions 1093
- Functional Imaging of the Brain 1094

CONCEPT 49.3 The cerebral cortex controls voluntary movement and cognitive functions 1094

- Information Processing 1095
- Language and Speech 1096
- Lateralization of Cortical Function 1096
- Frontal Lobe Function 1096
- Evolution of Cognition in Vertebrates 1097

CONCEPT 49.4 Changes in synaptic connections underlie memory and learning 1097

- Neuronal Plasticity 1098
- Memory and Learning 1098
- Long-Term Potentiation 1099

CONCEPT 49.5 Many nervous system disorders can now be explained in molecular terms 1100

- Schizophrenia 1100
- Depression 1100
- The Brain's Reward System and Drug Addiction 1101
- Alzheimer's Disease 1101
- Parkinson's Disease 1102
- Future Directions 1102

50 Sensory and Motor Mechanisms 1105

Sense and Sensibility 1105

CONCEPT 50.1 Sensory receptors transduce stimulus energy and transmit signals to the central nervous system 1106

- Sensory Reception and Transduction 1106
- Transmission 1107
- Perception 1107
- Amplification and Adaptation 1107
- Types of Sensory Receptors 1108

CONCEPT 50.2 In hearing and equilibrium, mechanoreceptors detect moving fluid or settling particles 1110

- Sensing of Gravity and Sound in Invertebrates 1110
- Hearing and Equilibrium in Mammals 1110
- Hearing and Equilibrium in Other Vertebrates 1114

CONCEPT 50.3 The diverse visual receptors of animals depend on light-absorbing pigments 1115

- Evolution of Visual Perception 1115
- The Vertebrate Visual System 1117

CONCEPT 50.4 The senses of taste and smell rely on similar sets of sensory receptors 1121

- Taste in Mammals 1121
- Smell in Humans 1122

CONCEPT 50.5 The physical interaction of protein filaments is required for muscle function 1123

- Vertebrate Skeletal Muscle 1124
- Other Types of Muscle 1129

CONCEPT 50.6 Skeletal systems transform muscle contraction into locomotion 1130

- Types of Skeletal Systems 1130
- Types of Locomotion 1133

51 Animal Behavior 1137

The How and Why of Animal Activity 1137

CONCEPT 51.1 Discrete sensory inputs can stimulate both simple and complex behaviors 1138

- Fixed Action Patterns 1138
- Migration 1138
- Behavioral Rhythms 1139
- Animal Signals and Communication 1139

CONCEPT 51.2 Learning establishes specific links between experience and behavior 1141

- Experience and Behavior 1141
- Learning 1142

CONCEPT 51.3 Selection for individual survival and reproductive success can explain diverse behaviors 1146

- Evolution of Foraging Behavior 1147
- Mating Behavior and Mate Choice 1147

CONCEPT 51.4 Genetic analyses and the concept of inclusive fitness provide a basis for studying the evolution of behavior 1152

- Genetic Basis of Behavior 1153
- Genetic Variation and the Evolution of Behavior 1153
- Altruism 1154
- Inclusive Fitness 1155
- Evolution and Human Culture 1157

UNIT 8 ECOLOGY 1161

Interview: Tracy Langkilde 1161

52 An Introduction to Ecology and the Biosphere 1162

Discovering Ecology 1162

CONCEPT 52.1 Earth's climate varies by latitude and season and is changing rapidly 1165

- Global Climate Patterns 1165
- Regional and Local Effects on Climate 1165
- Microclimate 1167
- Global Climate Change 1167

CONCEPT 52.2 The distribution of terrestrial biomes is controlled by climate and disturbance 1168

- Climate and Terrestrial Biomes 1168
- General Features of Terrestrial Biomes 1169
- Disturbance and Terrestrial Biomes 1170

CONCEPT 52.3 Aquatic biomes are diverse and dynamic systems that cover most of Earth 1175

- Zonation in Aquatic Biomes 1175

CONCEPT 52.4 Interactions between organisms and the environment limit the distribution of species 1176

- Dispersal and Distribution 1181
- Biotic Factors 1182
- Abiotic Factors 1182

CONCEPT 52.5 Ecological change and evolution affect one another over long and short periods of time 1185

53 Population Ecology 1188

Turtle Tracks 1188

CONCEPT 53.1 Biotic and abiotic factors affect population density, dispersion, and demographics 1189

- Density and Dispersion 1189
- Demographics 1191

CONCEPT 53.2 The exponential model describes population growth in an idealized, unlimited environment 1194

- Changes in Population Size 1194
- Exponential Growth 1194

CONCEPT 53.3 The logistic model describes how a population grows more slowly as it nears its carrying capacity 1195

- The Logistic Growth Model 1196
- The Logistic Model and Real Populations 1197

CONCEPT 53.4 Life history traits are products of natural selection 1198

- Diversity of Life Histories 1198
- "Trade-offs" and Life Histories 1199

CONCEPT 53.5 Density-dependent factors regulate population growth 1200

- Population Change and Population Density 1201
- Mechanisms of Density-Dependent Population Regulation 1201
- Population Dynamics 1202
- Population Cycles: *Scientific Inquiry* 1203

CONCEPT 53.6 The human population is no longer growing exponentially but is still increasing rapidly 1205

- The Global Human Population 1205
- Global Carrying Capacity 1207

54 Community Ecology 1212

Communities in Motion 1212

CONCEPT 54.1 Community interactions are classified by whether they help, harm, or have no effect on the species involved 1213

- Competition 1213
- Exploitation 1215
- Positive Interactions 1218

CONCEPT 54.2 Diversity and trophic structure characterize biological communities 1220

- Species Diversity 1220
- Diversity and Community Stability 1221
- Trophic Structure 1221
- Species with a Large Impact 1223
- Bottom-Up and Top-Down Controls 1225

CONCEPT 54.3 Disturbance influences species diversity and composition 1226

- Characterizing Disturbance 1226
- Ecological Succession 1227
- Human Disturbance 1229

CONCEPT 54.4 Biogeographic factors affect community diversity 1229

- Latitudinal Gradients 1230
- Area Effects 1230
- Island Equilibrium Model 1230

CONCEPT 54.5 Pathogens alter community structure locally and globally 1232

- Pathogens and Community Structure 1232
- Community Ecology and Zoonotic Diseases 1233

55 Ecosystems and Restoration Ecology 1236

Transformed to Tundra 1236

CONCEPT 55.1 Physical laws govern energy flow and chemical cycling in ecosystems 1237

- Conservation of Energy 1237
- Conservation of Mass 1237
- Energy, Mass, and Trophic Levels 1238

CONCEPT 55.2 Energy and other limiting factors control primary production in ecosystems 1239

- Ecosystem Energy Budgets 1239
- Primary Production in Aquatic Ecosystems 1240
- Primary Production in Terrestrial Ecosystems 1241

CONCEPT 55.3 Energy transfer between trophic levels is typically only 10% efficient 1244

- Production Efficiency 1244
- Trophic Efficiency and Ecological Pyramids 1244

CONCEPT 55.4 Biological and geochemical processes cycle nutrients and water in ecosystems 1246

- Decomposition and Nutrient Cycling Rates 1246
- Biogeochemical Cycles 1247
- Case Study:* Nutrient Cycling in the Hubbard Brook Experimental Forest 1250

CONCEPT 55.5 Restoration ecologists return degraded ecosystems to a more natural state 1251

- Bioremediation 1251
- Biological Augmentation 1253
- Ecosystems: *A Review* 1253

56 Conservation Biology and Global Change 1258

Psychedelic Treasure 1258

CONCEPT 56.1 Human activities threaten Earth's biodiversity 1259

- Three Levels of Biodiversity 1259
- Biodiversity and Human Welfare 1260
- Threats to Biodiversity 1261

CONCEPT 56.2 Population conservation focuses on population size, genetic diversity, and critical habitat 1264

- Small-Population Approach 1264
- Declining-Population Approach 1267
- Weighing Conflicting Demands 1268

CONCEPT 56.3 Landscape and regional conservation help sustain biodiversity 1268

- Landscape Structure and Biodiversity 1268
- Establishing Protected Areas 1270
- Urban Ecology 1272

CONCEPT 56.4 Earth is changing rapidly as a result of human actions 1272

- Nutrient Enrichment 1273
- Toxins in the Environment 1274
- Greenhouse Gases and Climate Change 1275
- Depletion of Atmospheric Ozone 1280

CONCEPT 56.5 Sustainable development can improve human lives while conserving biodiversity 1281

- Sustainable Development 1281
- The Future of the Biosphere 1282

APPENDIX A Answers A-1

APPENDIX B Periodic Table of the Elements B-1

APPENDIX C The Metric System C-1

APPENDIX D A Comparison of the Light Microscope and the Electron Microscope D-1

APPENDIX E Classification of Life E-1

APPENDIX F Scientific Skills Review F-1
