Fundamentals of Food Process Engineering

Fourth Edition

Preface

Since the publication of the first edition in 1981, the second edition in 2001, and the third edition in 2007, this textbook has been widely adopted for Food Engineering courses worldwide. The authors express their gratitude to colleagues who have adopted this textbook and to those who have made constructive criticisms on the materials in the previous editions. This new edition not only incorporates changes suggested by colleagues, but additional materials have been added to include facilitated problem-solving using a computer and new food processing and food product technologies, such as aseptic processing and emerging food processing technologies. New sections have been added in most of the chapters reflecting the current state of the technology. The expanded coverage may result in not enough time available in a school term to cover all areas; therefore, instructors are advised to carefully peruse the book and select the most appropriate sections to cover in a school term. The advantage of the expanded coverage is the elimination of the need for a supplementary textbook.

The success of this textbook has been attributed to the expansive coverage of subject areas specified in the Institute of Food Technologists model curriculum for food science majors in the USA and the use of examples utilizing conditions encountered in actual food processing operations. This theme continues in the fourth edition. In addition to the emphasis on problem-solving, technological principles that form the basis for a process are presented so that the process can be better understood and selection of processing parameters to maximize product quality and safety can be made more effective. The fourth edition incorporates most of what was in the third edition with most of the material updated to include the use of computers in problem-solving. Use of the spreadsheet and macros such as the determinant for solving simultaneous linear equations, the solver function, and programming in Visual BASIC are used throughout the book. The manual problem-solving approach has not been abandoned in favor of the computer approach. Thus, users can still apply the concepts to better understand a process rather than just mechanically entering inputs into a preprogrammed algorithm.

Entirely new sections include enthalpy change calculations in freezing based on the freezing point depression, evaporative cooling, interpretation of pump performance curves, determination of shape factors in heat exchange by radiation, unsteady-state heat transfer, kinetic data for thermal degradation

of foods during thermal processing, pasteurization parameters for shelf-stable high-acid foods and long-life refrigerated low-acid foods, high-pressure processing of fluid and packaged foods, concentration of juices, environmentally friendly refrigerants, modified atmosphere packaging of produce, sorption equations for water activity of solid foods, the osmotic pressure and water activity relationships, vacuum dehydration, new membranes commercially available for food processing and waste treatment, and supercritical fluid extraction.

This edition contains much new hard-to-find data needed to conduct food process engineering calculations and will be very useful as a sourcebook of data and calculation techniques for practicing food engineers.

Athens, GA, USA

Contents

1	Units and Dimensions	1
1.1	Definition of Terms	1
1.2	Systems of Measurement	2
1.3	The SI System	2
1.3.1	Units in SI and Their Symbols	2
1.3.2	Prefixes Recommended for Use in SI	2
1.4	Conversion of Units	3
1.4.1	Precision, Rounding-Off Rule, and Significant Digits	3
1.5	The Dimensional Equation	4
1.6	Conversion of Units Using the Dimensional Equation	4
1.7	The Dimensional Constant (G_c)	5
1.8	Determination of Appropriate SI Units	6
1.9	Dimensional Consistency of Equations	7
1.10	Conversion of Dimensional Equations	7
	Problems	9
	Suggested Reading	10
2	Material Balances	11
2.1	Basic Principles	11
2.1.1	Law of Conservation of Mass	11
2.1.2	Process Flow Diagrams	11
2.1.3	System Boundaries	12
2.1.4	Total Mass Balance	13
2.1.5	Component Mass Balance	14
2.1.6	Basis and “Tie Material”	16
2.2	Material Balance Problems Involved in Dilution, Concentration, and Dehydration	16
2.2.1	Steady State	16
2.2.2	Volume Changes on Mixing	17
2.2.3	Continuous Versus Batch	18
2.2.4	Recycle	18
2.2.5	Unsteady State	20
2.3	Blending of Food Ingredients	22
2.3.1	Total Mass and Component Balances	22
2.3.2	Use of Specified Constraints in Equations	25

2.4	Multistage Processes	28
Problems		35
Suggested Reading		40
3	Gases and Vapors	41
3.1	Equations of State for Ideal and Real Gases	41
3.1.1	The Kinetic Theory of Gases	41
3.1.2	Absolute Temperature and Pressure	42
3.1.3	Quantity of Gases	43
3.1.4	The Ideal Gas Equation	44
3.1.5	Van Der Waals Equation of State	45
3.1.6	Critical Conditions for Gases	47
3.1.7	Gas Mixtures	47
3.2	Thermodynamics	49
3.2.1	Thermodynamic Variables	49
3.2.2	The Relationship Between C_p and C_v for Gases	50
3.2.3	P-V-T Relationships for Ideal Gases in Thermodynamic Processes	50
3.2.4	Changes in Thermodynamic Properties, Work, and Heat Associated with Thermodynamic Processes	51
3.2.5	Work and Enthalpy Change on Adiabatic Expansion or Compression of an Ideal Gas	51
3.2.6	Work and Enthalpy Change on Isothermal Expansion or Compression of an Ideal Gas	52
3.3	Vapor-Liquid Equilibrium	52
3.3.1	The Clausius-Clapeyron Equation	53
3.3.2	Liquid Condensation from Gas Mixtures	53
Problems		55
Suggested Reading		56
4	Energy Balances	57
4.1	General Principles	57
4.2	Energy Terms	58
4.2.1	Heat	58
4.2.2	Heat Content, Enthalpy	58
4.2.3	Specific Heat of Solids and Liquids	58
4.3	Enthalpy Changes in Foods During Freezing	63
4.3.1	Correlation Equations Based on Freezing Points of Food Products Unmodified from the Natural State	63
4.3.2	Enthalpy Changes During the Freezing of Foods Calculated from Molality of Liquid Water Fraction of the Food	64
4.3.3	Freezing Point Depression by Solutes	64
4.3.4	Amount of Liquid Water and Ice at Temperatures Below Freezing	65

4.3.5	Sensible Heat of Water and Ice at Temperatures Below the Freezing Point	65
4.3.6	Total Enthalpy Change	65
4.3.7	Specific Heats of Gases and Vapors	66
4.4	Properties of Saturated and Superheated Steam	68
4.4.1	The Steam Tables	68
4.4.2	Properties of Steam Having Less Than 100% Quality	71
4.5	Heat Balances	72
	Problems	76
	Suggested Reading	79
5	Flow of Fluids	81
5.1	The Concept of Viscosity	81
5.2	Rheology	83
5.2.1	Viscometry	83
5.2.2	Effect of Temperature on Rheological Properties	93
5.2.3	Back Extrusion	94
5.2.4	Determination of Rheological Properties of Fluids Using Rotational Viscometers	99
5.3	Continuous Viscosity Monitoring and Control	104
5.3.1	Capillary Viscometer	105
5.3.2	Rotational Viscometer	105
5.3.3	Viscosity-Sensitive Rotameter	106
5.4	Flow of Falling Films	106
5.4.1	Films of Constant Thickness	106
5.4.2	Time-Dependent Film Thickness	108
5.4.3	Processes Dependent on Fluid Film Thicknesses	110
5.5	Transportation of Fluids	111
5.5.1	Momentum Balance	111
5.5.2	The Continuity Principle	112
5.6	Fluid Flow Regimes	113
5.6.1	The Reynolds Number	113
5.6.2	Pipes and Tubes	114
5.6.3	Frictional Resistance to Flow of Newtonian Fluids	114
5.6.4	Frictional Resistance to Flow of Non-Newtonian Fluids	118
5.6.5	Frictional Resistance Offered by Pipe Fittings to Fluid Flow	119
5.7	Mechanical Energy Balance: The Bernoulli Equation	120
5.8	Pumps	124
5.8.1	Types of Pumps and Their Characteristics	124
5.8.2	Factors to Be Considered in Pump Selection	124
5.8.3	Performance Curves of Pumps	125
	Problems	127
	Suggested Reading	132

6 Heat Transfer	135
6.1 Mechanisms of Heat Transfer	135
6.1.1 Heat Transfer by Conduction	135
6.1.2 Fourier's First Law of Heat Transfer	135
6.1.3 Estimation of Thermal Conductivity of Food Products	136
6.1.4 Fourier's Second Law of Heat Transfer	138
6.1.5 Temperature Profile for Unidirectional Heat Transfer Through a Slab	139
6.1.6 Conduction Heat Transfer Through Walls of a Cylinder	141
6.1.7 The Temperature Profile in the Walls of a Cylinder in Steady-State Heat Transfer	141
6.1.8 Heat Transfer by Convection	142
6.1.9 Heat Transfer by Radiation	143
6.1.10 Microwave and Dielectric Heating	149
6.2 Temperature Measuring Devices	152
6.2.1 Liquid-in-Glass Thermometers	153
6.2.2 Fluid-Filled Thermometers	153
6.2.3 Bimetallic Strip Thermometers	153
6.2.4 Resistance Temperature Devices (RTDs)	154
6.2.5 Thermocouples	154
6.2.6 Radiation Pyrometers	154
6.2.7 Accurate Temperature Measurements	155
6.3 Steady-State Heat Transfer	155
6.3.1 The Concept of Resistance to Heat Transfer	155
6.3.2 Combined Convection and Conduction: The Overall Heat Transfer Coefficient	156
6.4 Heat Exchange Equipment	158
6.4.1 Heat Transfer in Heat Exchangers	160
6.4.2 The Logarithmic Mean Temperature Difference	160
6.5 Local Heat Transfer Coefficients	162
6.5.1 Dimensionless Quantities	162
6.5.2 Equations for Calculating Heat Transfer Coefficients	163
6.6 Unsteady-State Heat Transfer	169
6.6.1 Heating of Solids Having Infinite Thermal Conductivity	169
6.6.2 Solids with Finite Thermal Conductivity	170
6.6.3 The Semi-Infinite Slab with Constant Surface Temperature	171
6.6.4 The Infinite Slab	172
6.6.5 Temperature Distribution for a Brick-Shaped Solid	173
6.6.6 Use of Heisler and Gurney-Lurie Charts	174

6.7	Calculating Surface Heat Transfer Coefficients from Experimental Heating Curves	175
6.8	Freezing Rates	176
	Problems	179
	Suggested Readings	182
7	Kinetics of Chemical Reactions in Foods	183
7.1	Theory of Reaction Rates	183
7.2	Types of Reactions	183
7.2.1	Unimolecular Reactions	183
7.2.2	Bimolecular Reactions	184
7.2.3	Reversible Reactions	184
7.3	Enzyme Reactions	186
7.4	Reaction Order	187
7.4.1	Zero-Order Reactions	187
7.4.2	First-Order Reactions	187
7.4.3	Second-Order Reactions	187
7.4.4	<i>n</i> th-Order Reactions	188
7.5	Reactions Where Product Concentration Is Rate Limiting	188
7.6	The Reaction Rate Constant	189
7.7	Temperature Dependence of Reaction Rates	189
7.7.1	The Arrhenius Equation	189
7.7.2	The Q ₁₀ Value	190
7.7.3	The z Value	190
7.8	Determination of Reaction Kinetic Parameters	191
7.9	Use of Chemical Reaction Kinetic Data for Thermal Process Optimization	192
	Problems	192
	Suggested Reading	193
8	Thermal Process Calculations	195
8.1	Processes and Systems for Stabilization of Foods for Shelf-Stable Storage: Systems Requirements	195
8.1.1	In-Container Processing	195
8.1.2	Processing Products Packaged in Flexible Plastic Containers	198
8.1.3	Processing in Glass Containers	199
8.1.4	Flame Sterilization Systems	200
8.1.5	Continuous Flow Sterilization: Aseptic or Cold Fill	200
8.1.6	Steam-Air Mixtures for Thermal Processing	201
8.2	Microbiological Inactivation Rates at Constant Temperature	201
8.2.1	Rate of Microbial Inactivation	201
8.2.2	Shape of Microbial Inactivation Curves	202
8.2.3	Sterilizing Value or Lethality of a Process	204
8.2.4	Acceptable Sterilizing Value for Processes	205

8.2.5	Selection of Inoculation Levels in Inoculated Packs	206
8.2.6	Determination of D Values Using the Partial Sterilization Technique	207
8.2.7	The Heat Resistance of Spoilage Microorganisms	207
8.2.8	F_0 Values Used in Commercial Sterilization of Canned Foods	207
8.2.9	Surface Sterilization	207
8.3	Effect of Temperature on Thermal Inactivation of Microorganisms	209
8.4	Inactivation of Microorganisms and Enzymes in Continuously Flowing Fluids	211
8.4.1	Time and Temperature Used in the Pasteurization of Fluid Foods	211
8.4.2	Microbial Inactivation in Continuously Flowing Fluids	213
8.4.3	Nutrient Degradation	216
8.4.4	High-Pressure Pasteurization	219
8.4.5	Sterilization of Fluids Containing Discrete Particulates by Heat	222
8.5	Sterilizing Value of Processes Expressed as F_0	223
8.6	Thermal Process Calculations for Canned Foods	223
8.6.1	The General Method	224
8.6.2	Heat Transfer Equations and Time-Temperature Curves for Canned Foods	225
8.6.3	Plotting Heat Penetration Data	227
8.6.4	Formula Methods for Thermal Process Evaluation	231
8.6.5	Evaluation of Probability of Spoilage from a Given Process	233
8.7	Broken Heating Curves	236
8.8	Quality Factor Degradation	239
	Problems	240
	Suggested Reading	244
9	Aseptic Processing	245
9.1	The System and Its Elements	245
9.2	Characteristics of Specific Elements	245
9.2.1	Flow Control	246
9.2.2	Heat Transfer/Cooling	247
9.2.3	Hold Tube	251
9.2.4	Deaerators	252
9.2.5	Aseptic Surge Tank	252
9.3	Thermal Process for the Product	252
9.3.1	Influence of Product Characteristics	252
9.3.2	Thermal Process Calculations	253
9.4	Flow Characteristics of Product	256
9.4.1	Residence Time Distribution (RTD)	258

9.5	Heat Transfer to Product	269
9.6	Filling and Packaging	272
9.7	Monitors and Controls	272
9.8	Processing System Sterilization	273
9.8.1	Maintenance of Sterility	274
9.8.2	Process Confirmation	274
	Problems	275
	Suggested Reading	276
