Brief Contents

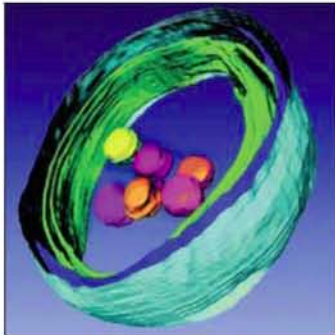

Preface	xvii
eTopic Contents	xxxiii
About the Authors	xxxiv
Part 1: The Microbial Cell	2
1 Microbial Life: Origin and Discovery	5
2 Observing the Microbial Cell	39
3 Cell Structure and Function	73
4 Bacterial Culture, Growth, and Development	113
5 Environmental Influences and Control of Microbial Growth	149
6 Virus Structure and Function	181
Part 2: Genes and Genomes	218
7 Genomes and Chromosomes	221
8 Transcription, Translation, and Bioinformatics	257
9 Gene Transfer, Mutations, and Genome Evolution	301
10 Molecular Regulation	341
11 Viral Molecular Biology	385
12 Molecular Techniques and Biotechnology	427
Part 3: Metabolism and Biochemistry	454
13 Energetics and Catabolism	457
14 Respiration, Lithotrophy, and Photolysis	501
15 Biosynthesis	543
16 Food and Industrial Microbiology	583
Part 4: Microbial Diversity and Ecology	620
17 Origins and Evolution	623
18 Bacterial Diversity	669
19 Archaeal Diversity	715
20 Eukaryotic Diversity	751
21 Microbial Ecology	789
22 Microbes and the Global Environment	829
Part 5: Medicine and Immunology	858
23 Human Microbiota and Nonspecific Host Defenses	861
24 The Adaptive Immune Response	893
25 Microbial Pathogenesis	935
26 Microbial Diseases	977
27 Antimicrobial Chemotherapy	1027
28 Clinical Microbiology and Epidemiology	1063
Appendix 1: Biological Molecules	A-1
Appendix 2: Introductory Cell Biology: Eukaryotic Cells	A-21
Answers to Thought Questions	AQ-1
Glossary	G-1
Figure Credits	F-1
Index	I-1

PART 1

The Microbial Cell 2

AN INTERVIEW WITH RITA COLWELL: THE GLOBAL IMPACT OF MICROBIOLOGY

CHAPTER 1

Microbial Life: Origin and Discovery 5

1.1 From Germ to Genome: What Is a Microbe?	6
1.2 Microbes Shape Human History	11
1.3 Medical Microbiology	17
Special Topic 1.1 How Did Life Originate?	18
1.4 Microbial Ecology	26
1.5 The Microbial Family Tree	28
1.6 Cell Biology and the DNA Revolution	31

CHAPTER 2

Observing the Microbial Cell 39

2.1 Observing Microbes	40
2.2 Optics and Properties of Light	44
2.3 Bright-Field Microscopy	48
2.4 Dark-Field, Phase-Contrast, and Interference Microscopy	55
2.5 Fluorescence Microscopy	58
2.6 Electron Microscopy	62
Special Topic 2.1 Cryo-Electron Tomography Images an Entire Cell in Three Dimensions	66
2.7 Visualizing Molecules	68

CHAPTER 3

Cell Structure and Function 73

- 3.1 The Bacterial Cell: An Overview 75
- 3.2 How We Study Cell Parts 78
- 3.3 The Cell Membrane and Transport 82
- 3.4 The Cell Wall and Outer Layers 88
 - Special Topic 3.1 How Antibiotics Cross the Outer Membrane 96
- 3.5 The Nucleoid and Gene Expression 98
- 3.6 Cell Division 101
 - Special Topic 3.2 Bacteria Have a Cytoskeleton 104
- 3.7 Specialized Structures 106

CHAPTER 4

Bacterial Culture, Growth, and Development 113

- 4.1 Microbial Nutrition 114
- 4.2 Nutrient Uptake 120
- 4.3 Culturing Bacteria 126
- 4.4 Counting Bacteria 129
- 4.5 The Growth Cycle 132
- 4.6 Biofilms 139
 - Special Topic 4.1 Biofilms, Disease, and Garlic 141
- 4.7 Cell Differentiation 142

CHAPTER 5

Environmental Influences and Control of Microbial Growth 149

- 5.1 Environmental Limits on Growth 150
- 5.2 Adaptation to Temperature 151
 - Special Topic 5.1 It's Raining Bacteria 155
- 5.3 Adaptation to Pressure 156
- 5.4 Water Activity and Salt 157
- 5.5 Adaptation to pH Changes 159
- 5.6 Oxygen and Other Electron Acceptors 164
- 5.7 Nutrient Deprivation and Starvation 167
- 5.8 Physical, Chemical, and Biological Control of Microbes 170

CHAPTER 6

Virus Structure and Function 181

- 6.1 What Is a Virus? 182
- 6.2 Virus Structure 187
- 6.3 Viral Genomes and Classification 191
- 6.4 Bacteriophage Life Cycles 197
- 6.5 Animal and Plant Virus Life Cycles 201
- 6.6 Culturing Viruses 208
 - Special Topic 6.1 West Nile Virus, an Emerging Pathogen 212
- 6.7 Viral Ecology 212

PART 2**Genes and Genomes****218**
**AN INTERVIEW WITH CHRISTINE JACOBS-WAGNER:
THE THRILL OF DISCOVERY IN MOLECULAR MICROBIOLOGY**
CHAPTER 7
Genomes and Chromosomes **221**

- 7.1** DNA: The Genetic Material 222
- 7.2** Genome Organization 223
- 7.3** DNA Replication 232
- 7.4** Plasmids 242
- 7.5** Eukaryotic Chromosomes 244
- 7.6** DNA Sequence Analysis 246
 - Special Topic 7.1 Where Have All the Bees Gone?
Metagenomics, Pyrosequencing, and Nature 252

CHAPTER 8
**Transcription, Translation,
and Bioinformatics** **257**

- 8.1** RNA Polymerases and Sigma Factors 258
- 8.2** Transcription of DNA to RNA 261
- 8.3** Translation of RNA to Protein 268
 - Special Topic 8.1 Stalking the Lone Ribosome 279
- 8.4** Protein Modification and Folding 284
- 8.5** Secretion: Protein Traffic Control 285
- 8.6** Protein Degradation: Cleaning House 290
- 8.7** Bioinformatics: Mining the Genomes 292

CHAPTER 9
**Gene Transfer, Mutations,
and Genome Evolution** **301**

- 9.1** The Mosaic Nature of Genomes 302
- 9.2** Gene Transfer 302
 - Special Topic 9.1 There's a Bacterial Genome
Hidden in My Fruit Fly 310
- 9.3** Recombination 315
- 9.4** Mutations 319
- 9.5** DNA Repair 325
- 9.6** Mobile Genetic Elements 331
- 9.7** Genome Evolution 335

CHAPTER 10
Molecular Regulation **341**

- 10.1** Regulating Gene Expression 342
- 10.2** Paradigm of the Lactose Operon 345

10.3	Other Systems of Operon Control	351
10.4	Sigma Factor Regulation	358
10.5	Small Regulatory RNAs	361
10.6	DNA Rearrangements: Phase Variation by Shifty Pathogens	364
10.7	Integrated Control Circuits Special Topic 10.1 Toxin-Antitoxin Modules: Mechanisms for Self-preservation or Altruism?	367
10.8	Quorum Sensing: Chemical Conversations Special Topic 10.2 The Role of Quorum Sensing in Pathogenesis and in Interspecies Communications	372
10.9	Genomics and Proteomics: Tools of the Future	374
		376
		377

CHAPTER 11

Viral Molecular Biology 385

11.1	Phage T4: The Classic Molecular Model	387
11.2	Poliovirus: (+) Strand RNA	393
11.3	Influenza Virus: (-) Strand RNA	399
11.4	Human Immunodeficiency Virus (HIV): Retrovirus	405
11.5	Herpes Simplex Virus: DNA Special Topic 11.1 How Did Viruses Originate?	415
11.6	Gene Therapy with Viruses	416
		422

CHAPTER 12

Molecular Techniques and Biotechnology 427

12.1	Basic Tools of Biotech: A Research Case Study	428
12.2	Genetic Analyses	428
12.3	Molecular Analyses	432
12.4	"Global" Questions of Cell Physiology	441
12.5	Applied Biotechnology Special Topic 12.1 DNA Vaccines	445
		446

PART 3

Metabolism and Biochemistry 454

**AN INTERVIEW WITH DAN WOZNAK:
POLYMER BIOSYNTHESIS MAKES A PATHOGENIC BIOFILM**

CHAPTER 13

Energetics and Catabolism 457

13.1	Energy and Entropy for Life	458
13.2	Energy and Entropy in Biochemical Reactions	462
13.3	Energy Carriers and Electron Transfer	465
13.4	Catabolism: The Microbial Buffet Special Topic 13.1 Swiss Cheese: A Product of Bacterial Catabolism	471
		476

13.5	Glucose Breakdown and Fermentation	478
13.6	The Tricarboxylic Acid (TCA) Cycle	487
13.7	Aromatic Pollutants	493
	Special Topic 13.2 Genomic Analysis of Metabolism	494

CHAPTER 14**Respiration, Lithotrophy, and Photolysis 501**

14.1	Electron Transport Systems	502
14.2	The Proton Motive Force	507
	Special Topic 14.1 Testing the Chemiosmotic Theory	510
14.3	The Respiratory ETS and ATP Synthase	512
14.4	Anaerobic Respiration	520
	Special Topic 14.2 Bacterial Electric Power	522
14.5	Lithotrophy and Methanogenesis	524
14.6	Phototrophy	529

CHAPTER 15**Biosynthesis 543**

15.1	Overview of Biosynthesis	544
15.2	CO ₂ Fixation: The Calvin Cycle	545
	Special Topic 15.1 The Discovery of ¹⁴ C	548
15.3	CO ₂ Fixation in Anaerobes and Archaea	556
15.4	Biosynthesis of Fatty Acids, Polyesters, and Polyketides	559
	Special Topic 15.2 Metagenomic Screening for Polyketide Drugs	564
15.5	Nitrogen Fixation	567
15.6	Biosynthesis of Amino Acids and Nitrogenous Bases	572
15.7	Biosynthesis of Tetrapyrroles	578

CHAPTER 16**Food and Industrial Microbiology 583**

16.1	Microbes as Food	584
16.2	Fermented Foods: An Overview	586
16.3	Acid- and Alkali-Fermented Foods	589
	Special Topic 16.1 Chocolate: The Mystery Fermentation	594
16.4	Ethanollic Fermentation: Bread and Wine	596
16.5	Food Spoilage and Preservation	601
16.6	Industrial Microbiology	609
	Special Topic 16.2 Start-Up Companies Take On Tuberculosis	610

PART 4**Microbial Diversity and Ecology**

620

**AN INTERVIEW WITH KARL STETTER: ADVENTURES IN
MICROBIAL DIVERSITY LEAD TO PRODUCTS IN INDUSTRY**
CHAPTER 17**Origins and Evolution 623**

- 17.1** Origins of Life 625
- 17.2** Models for Early Life 635
- 17.3** Microbial Divergence and Phylogeny 638
 - Special Topic 17.1 Phylogeny of a Shower Curtain Biofilm 644
- 17.4** Horizontal Gene Transfer 648
- 17.5** Microbial Species and Taxonomy 650
 - Special Topic 17.2 Horizontal Gene Transfer
in *E. coli* O157:H7 654
- 17.6** Symbiosis and the Origin of Mitochondria
and Chloroplasts 658

CHAPTER 18**Bacterial Diversity 669**

- 18.1** Bacterial Diversity at a Glance 671
- 18.2** Deep-Branching Thermophiles 678
- 18.3** Cyanobacteria: Oxygenic Phototrophs 681
- 18.4** Gram-Positive Firmicutes and Actinobacteria 684
- 18.5** Gram-Negative Proteobacteria and Nitrospirae 695
 - Special Topic 18.1 Carbon Monoxide: Food for Bacteria? 698
- 18.6** Bacteroidetes and Chlorobi 708
- 18.7** Spirochetes: Sheathed Spiral Cells
with Internalized Flagella 708
- 18.8** Chlamydiae, Planctomycetes, and Verrucomicrobia:
Irregular Cells 710

CHAPTER 19**Archaeal Diversity 715**

- 19.1** Archaeal Traits 717
- 19.2** Crenarchaeota: Hyperthermophiles 724
 - Special Topic 19.1 Research on Deep-Sea
Hyperthermophiles 727
- 19.3** Crenarchaeota: Mesophiles and Psychrophiles 730
- 19.4** Euryarchaeota: Methanogens 733
- 19.5** Euryarchaeota: Halophiles 739
 - Special Topic 19.2 Haloarchaea in the High School
Classroom 741
- 19.6** Euryarchaeota: Thermophiles and Acidophiles 745
- 19.7** Deeply Branching Divisions 748

CHAPTER 20

Eukaryotic Diversity **751**

- 20.1 Phylogeny of Eukaryotes 752
- 20.2 Fungi and Microsporidia 761
- 20.3 Algae 769
- 20.4 Amebas and Slime Molds 775
- 20.5 Alveolates: Ciliates, Dinoflagellates, and Apicomplexans 778
- 20.6 Trypanosomes and Metamonads 783
- Special Topic 20.1 The Trypanosome: A Shape-Shifting Killer 784

CHAPTER 21

Microbial Ecology **789**

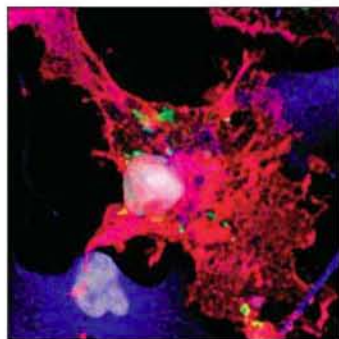

- 21.1 Microbes in Ecosystems 791
- 21.2 Microbial Symbiosis 794
- 21.3 Marine and Aquatic Microbiology 798
- 21.4 Soil and Subsurface Microbiology 810
- 21.5 Microbial Communities within Plants 817
- 21.6 Microbial Communities within Animals 821
- Special Topic 21.1 A Veterinary Experiment:
The Fistulated Cow 824

CHAPTER 22

Microbes and the Global Environment **829**

- 22.1 Biogeochemical Cycles 830
- 22.2 The Carbon Cycle 833
- 22.3 The Hydrologic Cycle and Wastewater Treatment 835
- Special Topic 22.1 Wetlands: Disappearing Microbial
Ecosystems 836
- 22.4 The Nitrogen Cycle 841
- 22.5 Sulfur, Phosphorus, and Metals 846
- 22.6 Astrobiology 852

PART 5

Medicine and Immunology **858**

**AN INTERVIEW WITH FERRIC FANG:
MOLECULAR MICROBIOLOGY DISSECTS A PATHOGEN**

CHAPTER 23

**Human Microbiota and
Nonspecific Host Defenses** **861**

- 23.1 Human Microbiota: Location and Shifting Composition 862
- 23.2 Risks and Benefits of Harboring Microbial Populations 870
- 23.3 Overview of the Immune System 871
- 23.4 Barbarians at the Gate: Innate Host Defenses 875

	Special Topic 23.1 Do Defensins Help Determine Species Specificity for Infection?	879
23.5	Innate Immunity: The Acute Inflammatory Response	880
23.6	Phagocytosis	883
23.7	Innate Defenses: Interferon, Natural Killer Cells, and Toll-Like Receptors	885
23.8	Complement's Role in Innate Immunity	888
23.9	Fever	890
CHAPTER 24		
	The Adaptive Immune Response	893
24.1	Adaptive Immunity	894
24.2	Immunogenicity	896
24.3	Antibody Structure and Diversity	900
24.4	Primary and Secondary Antibody Responses	905
24.5	Genetics of Antibody Production	908
24.6	T Cells, Histocompatibility, and Antigen Processing	913
24.7	Complement as Part of Adaptive Immunity	923
24.8	Hypersensitivity and Autoimmunity	925
	Special Topic 24.1 An Uneasy Peace: Détente at the Microbiota-Intestinal Interface	929
CHAPTER 25		
	Microbial Pathogenesis	935
25.1	Host-Pathogen Interactions	936
25.2	Virulence Factors and Pathogenicity Islands: The Tools and Toolkits of Microbial Pathogens	940
25.3	Virulence Factors: Microbial Attachment	943
25.4	Toxins Subvert Host Function	948
25.5	Protein Secretion and Pathogenesis	958
25.6	Finding Virulence Genes	961
	Special Topic 25.1 The Bacterial Trojan Horse: Bacteria That Deliver Their Own Receptor	962
25.7	Surviving within the Host	966
	Special Topic 25.2 Bacterial Covert Operations: Secreted <i>Shigella</i> Effector Proteins Jam Communications between Target Cells and Innate Immunity	968
25.8	Viral Pathogenesis	970
CHAPTER 26		
	Microbial Diseases	977
26.1	Characterizing and Diagnosing Microbial Diseases	978
26.2	Skin and Soft-Tissue Infections	980
26.3	Respiratory Tract Infections	984
26.4	Gastrointestinal Tract Infections	990
26.5	Genitourinary Tract Infections	995
	Special Topic 26.1 Intracellular Biofilm Pods Are Reservoirs of Infection	998

26.6	Central Nervous System Infections	1005
26.7	Cardiovascular System Infections	1012
26.8	Systemic Infections	1014
26.9	Immunization	1022

CHAPTER 27**Antimicrobial Chemotherapy 1027**

27.1	The Golden Age of Antibiotic Discovery	1028
27.2	Basic Concepts of Antimicrobial Therapy	1030
27.3	Measuring Drug Susceptibility	1031
27.4	Mechanisms of Action	1035
27.5	Antibiotic Biosynthesis	1045
27.6	Challenges of Drug Resistance	1046
27.7	The Future of Drug Discovery	1051
27.8	Antiviral Agents	1053
	Special Topic 27.1 Disrupting Cell-Cell Communications to Prevent Infection: Good Idea?	1054
	Special Topic 27.2 Resurrecting the 1918 Pandemic Flu Virus	1056
27.9	Antifungal Agents	1058

CHAPTER 28**Clinical Microbiology and Epidemiology 1063**

28.1	Principles of Clinical Microbiology	1064
28.2	Approaches to Pathogen Identification	1065
28.3	Specimen Collection	1079
28.4	Biosafety Containment Procedures	1083
28.5	Principles of Epidemiology	1085
28.6	Detecting Emerging Microbial Diseases	1091
	Special Topic 28.1 What's Blowing in the Wind? Quick Pathogen Detection Systems Guard against Bioterrorism	1092

APPENDIX 1**Biological Molecules A-1**

A1.1	Elements, Bonding, and Water	A-2
A1.2	Organic Molecules	A-5
A1.3	Proteins	A-6
A1.4	Carbohydrates	A-10
A1.5	Nucleic Acids	A-12
A1.6	Lipids	A-14
A1.7	Biological Chemistry	A-16

APPENDIX 2

**Introductory Cell Biology:
Eukaryotic Cells****A-21**

A2.1 The Cell Membrane	A-22
A2.2 The Nucleus and Mitosis	A-28
A2.3 Problems Faced by Large Cells	A-31
A2.4 The Endomembrane System	A-32
A2.5 The Cytoskeleton	A-35
A2.6 Mitochondria and Chloroplasts	A-37

Answers to Thought Questions**AQ-1****Figure Credits****F-1****Glossary****G-1****Index****I-1**
