<i>Preface</i> .....	<i>xxix</i>

## **Part I Cereal grain quality: an introduction**

<b>1 An introduction to the cereal grains: major providers for mankind's food needs</b> .....	<b>3</b>
<i>C. W. Wrigley, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
1.1 Introduction .....	3
1.2 Grains and people.....	4
1.3 Agricultural grains .....	9
1.4 Grain quality.....	12
1.5 The management of grain quality .....	19
1.6 Future trends.....	21
1.7 Sources of further information and advice .....	21
1.8 References .....	22
<b>2 Cereal-grain morphology and composition</b> .....	<b>24</b>
<i>C. W. Wrigley, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
2.1 Introduction .....	24
2.2 Morphology and variety identification.....	25
2.3 Ultrastructure of the grain.....	33
2.4 Approaches to composition analysis .....	37
2.5 Grain composition.....	37
2.6 The effects of processing on composition .....	41
2.7 Future trends.....	42

2.8	Sources of further information and advice .....	42
2.9	References .....	43
<b>3</b>	<b>The diversity of uses for cereal grains .....</b>	<b>45</b>
	<i>I. L. Batey, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
3.1	Introduction .....	45
3.2	Food.....	47
3.3	Feed .....	49
3.4	Industrial uses.....	50
3.5	Utilisation of individual cereals .....	50
3.6	Grain substitution .....	53
3.7	Whole-plant utilisation.....	54
3.8	Future trends.....	55
3.9	Sources of further information and advice .....	56
3.10	References .....	56
 <b>Part II Characteristics and quality requirements of specific cereals</b>		
<b>4</b>	<b>Wheat: characteristics and quality requirements .....</b>	<b>59</b>
	<i>S. Uthayakumaran, The University of Sydney, Australia and C. W. Wrigley, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
4.1	Introduction .....	59
4.2	Wheat as a genus.....	60
4.3	Unique aspects of wheat .....	74
4.4	Wheat production .....	86
4.5	Wheat utilisation and quality requirements .....	89
4.6	Testing for grain quality.....	93
4.7	Managing grain quality .....	95
4.8	Future trends.....	100
4.9	Sources of further information and advice .....	102
4.10	References .....	103
<b>5</b>	<b>Rye and triticale: characteristics and quality requirements .....</b>	<b>112</b>
	<i>C. W. Wrigley, formerly CSIRO Food and Nutritional Sciences, Australia and W. Bushuk, University of Manitoba, Canada</i>	
5.1	Introduction .....	112
5.2	Origins and genetic constitution .....	113
5.3	Worldwide production and regional distribution .....	118
5.4	Distinctive aspects of morphology, composition and grain defects .....	120
5.5	Utilisation and nutritional advantages.....	127
5.6	Distinctive aspects of grain analysis .....	131
5.7	Distinctive aspects of management.....	134
5.8	Future trends.....	135

5.9	Sources of further information and advice .....	136
5.10	References .....	137
<b>6</b>	<b>Barley: characteristics and quality requirements .....</b>	<b>141</b>
	<i>M. J. Edney, Canadian Grain Commission, Canada</i>	
6.1	Introduction .....	141
6.2	Unique morphological and biochemical characteristics of barley .....	142
6.3	Production and major uses of barley .....	144
6.4	Specific quality requirements for barley .....	148
6.5	Maintaining barley quality .....	157
6.6	Future trends.....	159
6.7	Sources of further information and advice .....	160
6.8	References .....	161
<b>7</b>	<b>Oats: characteristics and quality requirements .....</b>	<b>163</b>
	<i>P. Zwer, South Australian Research &amp; Development Institute (SARDI), Australia</i>	
7.1	Introduction .....	163
7.2	Classification, origin, and history .....	165
7.3	Unique morphological and biochemical characteristics...	165
7.4	Production and major uses of oats .....	172
7.5	Quality requirements for oats.....	174
7.6	Maintaining and improving oat quality.....	176
7.7	Future trends.....	180
7.8	Sources of further information and advice .....	180
7.9	References .....	181
<b>8</b>	<b>Corn: characteristics and quality requirements.....</b>	<b>183</b>
	<i>Z. Györi, University of Debrecen Center for Agricultural and Applied Economic Sciences, Hungary</i>	
8.1	Introduction: The importance of corn (maize) production in the international arena .....	183
8.2	Utilisation of corn .....	184
8.3	The structure and chemical composition of corn.....	186
8.4	Determination of corn quality .....	193
8.5	Effect of agronomy and storage on quality.....	199
8.6	Milling technologies.....	202
8.7	Complex utilisation of corn .....	203
8.8	Future trends.....	207
8.9	Source of further information and advice .....	208
8.10	References .....	209
<b>9</b>	<b>Rice: characteristics and quality requirements .....</b>	<b>212</b>
	<i>M. A. Fitzgerald, International Rice Research Institute (IRRI) College, Philippines</i>	
9.1	Introduction .....	212

9.2	Unique characteristics of rice.....	214
9.3	Quality traits.....	214
9.4	Environmental effects on rice quality .....	226
9.5	Future trends.....	226
9.6	References .....	228
<b>10</b>	<b>Sorghum and millets: characteristics and quality requirements .....</b>	<b>237</b>
	<i>J. R. N. Taylor and K. G. Duodu, University of Pretoria, South Africa</i>	
10.1	Introduction .....	237
10.2	Description of sorghum and millets .....	238
10.3	Current and emerging uses.....	243
10.4	Sorghum and millet quality parameters and their assessment .....	245
10.5	Existing sorghum and millet quality management systems .....	253
10.6	Future trends.....	258
10.7	Sources of further information and advice .....	258
10.8	References .....	259
 <b>Part III Grain quality analysis</b>		
<b>11</b>	<b>Analysis of grain quality at receival.....</b>	<b>267</b>
	<i>S. R. Delwiche, Beltsville Agricultural Research Center, USA</i>	
11.1	Introduction .....	267
11.2	The US grain inspection system .....	268
11.3	The Canadian grain inspection system .....	272
11.4	The Australian grain inspection system .....	280
11.5	The European Union grain inspection system .....	286
11.6	The Argentine grain inspection system .....	288
11.7	Traditional equipment used in wheat inspection at receival .....	292
11.8	New technologies for use at grain receival.....	299
11.9	Future trends.....	303
11.10	Sources of further information and advice .....	303
11.11	Acknowledgement.....	306
11.12	References .....	307
<b>12</b>	<b>Identification of grain variety and quality type .....</b>	<b>311</b>
	<i>C. A. Howitt, CSIRO Food Futures National Research Flagship, Australia</i>	
12.1	Introduction .....	311
12.2	Variety identification.....	312
12.3	Wheat .....	313
12.4	Barley and maize.....	316
12.5	DNA-based variety identification.....	317

12.6	Future challenges for variety identification .....	317
12.7	Identification of quality type utilising molecular markers .....	319
12.8	Future trends .....	330
12.9	Conclusion.....	331
12.10	References .....	332
<b>13</b>	<b>Food safety aspects of grain and cereal product quality .....</b>	<b>342</b>
	<i>A. J. Alldrick, Campden BRI, UK</i>	
13.1	Introduction .....	342
13.2	General principles of food safety with regard to cereals.....	344
13.3	The role of agronomy.....	345
13.4	Post harvest handling .....	350
13.5	Grain processing (flour milling).....	353
13.6	Food processing .....	356
13.7	Conclusions .....	361
13.8	Sources of further information and advice .....	362
13.9	References .....	362
 <b>Part IV Grain quality management</b>		
<b>14</b>	<b>Breeding for grain-quality traits.....</b>	<b>369</b>
	<i>Z. Bedő, L. Láng and M. Rakszegi, Agricultural Research Institute of the Hungarian Academy of Sciences, Hungary</i>	
14.1	Introduction .....	369
14.2	Breeding for improved wheat quality .....	371
14.3	Breeding for starch quality and bioactive compounds in small-grain cereals .....	378
14.4	Mutation breeding .....	382
14.5	Transgenesis .....	383
14.6	Sources of further information and advice .....	385
14.7	References .....	386
<b>15</b>	<b>The effects of growth environment and agronomy on grain quality .....</b>	<b>393</b>
	<i>M. J. Gooding, University of Reading, UK</i>	
15.1	Introduction .....	393
15.2	Growing conditions and environment .....	394
15.3	Sowing.....	400
15.4	Weed control .....	403
15.5	Disease control.....	403
15.6	Crop nutrition.....	406
15.7	Lodging and growth regulation.....	409
15.8	Future trends.....	410
15.9	Sources of further information and advice .....	410
15.10	References .....	411

<b>16</b>	<b>Maintaining grain quality during storage and transport .....</b>	<b>413</b>
	<i>I. L. Batey, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
16.1	Introduction .....	413
16.2	Generic characteristics of storage .....	414
16.3	Transport .....	426
16.4	Future trends.....	428
16.5	Sources of further information and advice .....	429
16.6	Acknowledgement.....	429
16.7	References .....	429
<b>17</b>	<b>Processing wheat to optimise product quality .....</b>	<b>431</b>
	<i>D. Miskelly, Westcott Consultants, Australia, I.L. Batey, formerly CSIRO Food and Nutritional Sciences, Australia and D. A. I. Suter, George Weston Technologies, Australia</i>	
17.1	Introduction .....	431
17.2	Procurement of wheat for processing.....	432
17.3	Choice of wheats for blending.....	432
17.4	Wheat milling.....	433
17.5	Quality and assessment during and after milling.....	436
17.6	Starch and gluten production .....	453
17.7	Future trends.....	454
17.8	Sources of further information and advice .....	455
17.9	Acknowledgement.....	456
17.10	References .....	456
<b>18</b>	<b>Grain quality: the consumer, the scientist, the technologist and the future .....</b>	<b>458</b>
	<i>C. W. Wrigley, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
18.1	Introduction .....	458
18.2	The process of grain quality innovation .....	459
18.3	Breeding for grain quality.....	462
18.4	Grain growing .....	464
18.5	Grain receipt and segregation.....	468
18.6	Grain storage and transport.....	469
18.7	Grain processing.....	471
18.8	Nutritional benefits of grain – real and perceived .....	474
18.9	Government concerns, population pressures and world-trade policies relating to cereal grains.....	476
18.10	Sources of further information and advice .....	477
18.11	References .....	477

**Part V Appendices**

<b>Appendix 1 Composition of grains and grain products.....</b>	<b>487</b>
<i>D. L. King, R. Zeug, and J. Pettit, University of Minnesota, USA</i>	
A1.1 Introduction .....	487
A1.2 Preparation of the nutrient tables .....	492
A1.3 Nutrient contents of grains and grain-related products....	492
A1.4 Sources of further information and advice .....	493
A1.5 References .....	493
<b>Appendix 2.....Equivalence between metric and US units for the grain industry .....</b>	<b>494</b>
<i>C. W. Wrigley, formerly CSIRO Food and Nutritional Sciences, Australia</i>	
A2.1 Introduction .....	494
A2.2 The metric system .....	497
A2.3 Imperial units in two versions.....	499
A2.4 Conclusion.....	500
A2.5 Sources of further information and advice .....	501
A2.6 References .....	501
<i>Index.....</i>	<i>502</i>
