Contents

<i>List of contributors</i>	<i>xii</i>
1 Introduction	1
<i>W. Jongen, Wageningen University</i>	
Part 1 Fruit, vegetables and health	3
2 Health benefits of increased fruit and vegetable consumption	5
<i>S. Southon and R. Faulks, Institute of Food Research, Norwich</i>	
2.1 Introduction	5
2.2 Evidence of benefit.	6
2.3 Fruits and vegetables: their constituents and modes of action	8
2.4 Health benefits of whole foods over isolated components	11
2.5 Influence of cell structure on nutrient delivery	14
2.6 Absorption, metabolism and tissue targeting	17
2.7 Increasing consumption: what is being done?.	18
2.8 Future trends	19
2.9 Sources of further information and advice	20
2.10 References	21
3 Antioxidants in fruits, berries and vegetables	23
<i>I. M. Heinonen, University of Helsinki and A. S. Meyer, Technical University of Denmark</i>	
3.1 Introduction	23
3.2 Antioxidants from fruits and berries: overview.	24
3.3 Stone fruits	28

3.4	Citrus fruits	31
3.5	Grapes	32
3.6	Apple	34
3.7	Berries	35
3.8	Antioxidants from vegetables: overview	36
3.9	Root and tuberous vegetables	38
3.10	Cruciferous vegetables	40
3.11	Other vegetables.	41
3.12	Effect of different processing technologies on antioxidant activity.	42
3.13	Future trends	43
3.14	Sources of further information and advice	43
3.15	Abbreviations.	44
3.16	References	44
4	Improving the nutritional quality of processed fruits and vegetables: the case of tomatoes	52
	<i>C. Leoni, Stazione Sperimentale per l'Industria delle Conserve Alimentari, Parma</i>	
4.1	Introduction: role of processed fruits and vegetables in the modern diet	52
4.2	Processed tomato products	53
4.3	Nutritional quality of processed tomato	54
4.4	Macrocomponents	55
4.5	Microcomponents of nutritional interest: minerals	56
4.6	Microcomponents: antioxidants and vitamins	56
4.7	Microcomponents: lycopene and other carotenes	57
4.8	Behaviour of nutrients during processing: vitamins	59
4.9	Behaviour of nutrients during processing: lycopene	59
4.10	Bioavailability of lycopene	64
4.11	References	65
Part 2	Managing safety and quality in the supply chain	67
5	Modelling fruit and vegetable production: the case of tomatoes.	69
	<i>C. Gary and M. Tchamitchian, Institut National de la Recherche Agronomique (INRA), Avignon</i>	
5.1	Introduction: the importance of modelling to quality	69
5.2	Types of tomato production.	70
5.3	Types of modelling.	71
5.4	Mass and energy balances of tomato crops.	71
5.5	Yield formation	75
5.6	Formation of product quality.	77
5.7	Interactions with pests and diseases.	78
5.8	Areas of application: yield prediction and crop management.	80

5.9	Areas of application: climate control	81
5.10	Areas of application: irrigation and fertilisation	82
5.11	Areas of application: plant protection	83
5.12	Current and future developments in modelling	84
5.13	Sources of further information and advice	85
5.14	References	85
6	Use of HACCP in fruit and vegetable production and post-harvest pretreatment	91
	<i>R. Early, Harper Adams University College</i>	
6.1	Introduction: food safety and quality	91
6.2	Food safety and the grower	94
6.3	The hazard analysis critical control point (HACCP) system	95
6.4	Good agricultural practice	95
6.5	Applying the HACCP concept	97
6.6	The HACCP study	99
6.7	Implementing and maintaining HACCP systems	112
6.8	Future trends	113
6.9	Sources of further information and advice	117
6.10	References	117
7	Maintaining the post-harvest quality of fruits and vegetables	119
	<i>J. Aked, Cranfield University at Silsoe</i>	
7.1	Introduction	119
7.2	Quality criteria for fresh produce: appearance, texture, flavour and aroma	120
7.3	Quality deterioration of fresh produce: respiration, ethylene, senescence and breaking of dormancy	123
7.4	Quality deterioration of fresh produce: water loss	125
7.5	Quality deterioration of fresh produce: fungal and bacterial pathogens	126
7.6	Quality deterioration of fresh produce: physiological disorders and physical injury	127
7.7	How quality of fruits and vegetables is measured: appearance, texture and flavour	129
7.8	Maintaining the quality of fresh produce: precooling	133
7.9	Maintaining the quality of fresh produce: prestorage treatments	135
7.10	Maintaining the quality of fresh produce: refrigerated storage	138
7.11	Maintaining the quality of fresh produce: controlled atmosphere (CA) storage	139
7.12	Maintaining the quality of fresh produce: packaging	140

7.13	Future trends	141
7.14	Conclusions	144
7.15	Sources of further information and advice	144
7.16	References	146
8	Measuring fresh fruit and vegetable quality: advanced optical methods.	150
	<i>R. Cubeddu, A. Pifferi, P. Taroni and A. Torricelli, Politecnico di Milano</i>	
8.1	Introduction	150
8.2	Advantages of time-resolved optical methods.	151
8.3	Principles of time-resolved reflectance.	152
8.4	Instrumentation	154
8.5	Data analysis	157
8.6	Effect of skin and penetration depth	158
8.7	Optical properties of fruits and vegetables	161
8.8	Applications: analysing fruit maturity and quality defects	164
8.9	Future trends	166
8.10	Sources of further information and advice	167
8.11	References	168
9	Applying advanced instrumental methods: mealiness in fruit.	170
	<i>J. Lammertyn, Katholieke Universiteit Leuven; B. E. Verlinden, Flanders Centre of Postharvest Technology; and B. M. Nicolai, Katholieke Universiteit Leuven</i>	
9.1	Introduction: defining mealiness in fruit.	170
9.2	Sensory evaluation and consumer's expectations	171
9.3	Instrumental methods	176
9.4	Microscopic imaging	176
9.5	Confined compression test.	177
9.6	Ultrasonic wave propagation	178
9.7	Nuclear magnetic resonance relaxometry and imaging	179
9.8	Near-infrared reflectance spectroscopy.	180
9.9	Aroma, sugar and acid analysis	180
9.10	Acoustic impulse response technique.	181
9.11	Electrical impedance.	181
9.12	Modelling mealiness.	182
9.13	Future trends	184
9.14	Sources of further information and advice	185
9.15	References	185
10	Maximising the quality of thermally processed fruits and vegetables.	188
	<i>H. S. Ramaswamy and C. R. Chen, McGill University</i>	
10.1	Introduction: the development of thermal processing	188

10.2	Types of thermal process	189
10.3	Principles of thermal processing	191
10.4	Thermal process calculations	195
10.5	Thermal processing and quality	198
10.6	Principles for optimising thermal processes	203
10.7	Future trends	208
10.8	References	212
11	Safety of cooked chilled foods containing vegetables	215
	<i>F. Carlin, Institut National de la Recherche Agronomique (INRA), Avignon</i>	
11.1	Introduction	215
11.2	The manufacturing process: physical and chemical characteristics	216
11.3	Microflora of cooked chilled foods containing vegetables	217
11.4	Microbial hazards	219
11.5	Control of microbial hazards: heat treatment	220
11.6	Control of microbial hazards: storage temperature	222
11.7	Control of microbial hazards: heat treatment combined with refrigeration	223
11.8	Control of microbial hazards: other techniques	223
11.9	Current guidelines and regulation	224
11.10	Use of microbiological risk assessment	225
11.11	Conclusion	227
11.12	References	228
Part 3	New technologies to maximise quality	231
12	Measuring and improving the natural resistance of fruit	233
	<i>J. M. Orea and A. González Ureña, Instituto Pluridisciplinar, Universidad Complutense de Madrid</i>	
12.1	Introduction: plant defence mechanisms and post-harvest quality	233
12.2	Plant defence mechanisms: ethylene, phytoalexins and other compounds	234
12.3	On-line detection of plant stress: volatile compounds	235
12.4	On-line detection of plant stress: non-volatile compounds	240
12.5	Methods for improving natural resistance in fruits	247
12.6	Anoxic and other treatments	247
12.7	Application of plant phytoalexins	251
12.8	Prestorage heat treatment	253
12.9	Disease-resistant transgenic plants	255
12.10	Conclusions and future trends	256
12.11	References	257

13	Improving the shelf-life of vegetables by genetic modification	267
	<i>L. C. Garratt, J. B. Power and M. R. Davey,</i>	
	<i>University of Nottingham</i>	
13.1	Introduction	267
13.2	Senescence of plant organs	267
13.3	Genetic control of leaf senescence and fruit ripening	268
13.4	Regulation of leaf senescence	271
13.5	Cytokinins and senescence	271
13.6	Ethylene and senescence	272
13.7	Reactive oxygen species and senescence	273
13.8	Flavour and shelf-life of vegetables	274
13.9	Plant transformation	274
13.10	Genetic modification of plants to improve shelf-life	275
13.11	Assessments of plant quality	279
13.12	Future trends	279
13.13	Sources of further information and advice	280
13.14	References	281
14	Minimal processing of fresh fruits and vegetables	288
	<i>E. Laurila and R. Ahvenainen, VTT Biotechnology</i>	
14.1	Introduction	288
14.2	Quality changes in minimally processed fruit and vegetables	288
14.3	Improving quality	291
14.4	Raw materials	291
14.5	Peeling, cutting and shredding	293
14.6	Cleaning, washing and drying	294
14.7	Browning inhibition	296
14.8	Biocontrol agents	298
14.9	Packaging	298
14.10	Edible coatings	301
14.11	Storage conditions	301
14.12	Processing guidelines for particular vegetables	302
14.13	Future trends	305
14.14	References	306
15	New modified atmosphere packaging (MAP) techniques for fresh prepared fruit and vegetables	310
	<i>B. P. F. Day, Food Science Australia</i>	
15.1	Introduction	310
15.2	Establishing an equilibrium modified atmosphere (EMA)	311
15.3	Use of high O ₂ MAP	312
15.4	Argon and nitrous oxide MAP	313
15.5	Non-sulphite dipping	314
15.6	Testing the effectiveness of novel MAP techniques	315
15.7	Guidelines for the use of high O ₂ MAP	319
15.8	Guidelines for non-sulphite dipping	324

15.9	Future trends	327
15.10	References	329
15.11	Acknowledgements.	330
16	Edible coatings for fruits	331
	<i>H. J. Park, Korea University/Clemson University</i>	
16.1	Introduction: the development of edible coatings	331
16.2	How edible coatings work: controlling internal gas composition	333
16.3	Selecting edible coatings.	333
16.4	Gas permeation properties of edible coatings	333
16.5	Wettability and coating effectiveness.	336
16.6	Determining diffusivities of fruits	338
16.7	Measuring internal gas composition of fruits	341
16.8	Future trends	341
16.9	References	343
17	High pressure processing of fruit and vegetables	346
	<i>L. Ludikhuyze, A. Van Loey, Indrawati and M. Hendrickx, Katholieke Universiteit Leuven</i>	
17.1	Introduction	346
17.2	High pressure (HP) technology	348
17.3	Impact of HP on spore-forming bacteria	350
17.4	Impact of HP on vegetative bacteria	351
17.5	Impact of HP on enzymatic activity.	352
17.6	HP processing, fruit and vegetable quality	353
17.7	Combining HP processing with other preservation techniques: the case of fruit	355
17.8	Future trends	357
17.9	References	358
18	The use of vacuum technology to improve processed fruit and vegetables.	363
	<i>R. Saurel, University of Lyon</i>	
18.1	Introduction: the role of vacuum technology	363
18.2	Principles: mass transfer and product behaviour	364
18.3	Applications.	369
18.4	Post-harvest storage	370
18.5	Heat treatment: blanching and canning	372
18.6	Freezing.	373
18.7	Osmotic dehydration and other applications	374
18.8	Future trends	376
18.9	Sources of further information and advice	377
18.10	References	378
