Contents

<i>Preface</i>	xix
<i>Contributors</i>	xxi
Part I Active and Atmospheric Packaging	1
1 Selected Techniques to Decontaminate Minimally Processed Vegetables	3
Vicente M. Gómez-López	
1.1 Introduction	3
1.2 UV-C light	4
1.2.1 Definition	4
1.2.2 Inactivation mechanism	4
1.2.3 Effect on microbial populations	4
1.2.4 Effect on sensory attributes	5
1.2.5 Effects on the nutritional and phytochemical composition of MPV	5
1.3 Pulsed light	6
1.3.1 Definition	6
1.3.2 Inactivation mechanism	6
1.3.3 Effect on microbial populations	7
1.3.4 Effect on sensory attributes	8
1.3.5 Effects on the nutritional and phytochemical composition of MPV	8
1.4 Electrolysed oxidizing water	8
1.4.1 Definition	8
1.4.2 Inactivation mechanism	9
1.4.3 Effect on microbial populations	9
1.4.4 Effect on sensory quality	11
1.4.5 Effects on the nutritional and phytochemical composition of MPV	11
1.5 Ozone	11
1.5.1 Definition	11
1.5.2 Inactivation mechanism	12
1.5.3 Ozonated water	12
1.5.4 Gaseous ozone	14
1.5.5 Effects on the nutritional and phytochemical composition of MPV	15
1.6 Low-temperature blanching	15
1.6.1 Definition	15
1.6.2 Effect on microbial populations	15
1.6.3 Effects on sensory quality	16
1.6.4 Effects on the nutritional and phytochemical composition of MPV	16
References	16

2 Active and Intelligent Packaging of Food	23
István Siró	
2.1 Introduction	23
2.2 Active scavengers	25
2.2.1 Oxygen scavengers	25
2.2.2 Ethylene scavengers	26
2.2.3 Carbon dioxide scavengers	27
2.2.4 Moisture regulators	28
2.2.5 Aroma scavengers/absorbers	28
2.3 Active releasers/emitters	29
2.3.1 Antimicrobial packaging	29
2.3.2 Antimicrobial substances	29
2.3.3 Development of antimicrobial packaging	33
2.3.4 Antioxidative packaging	34
2.3.5 Other releasers/emitters	35
2.3.6 Controlled release of active compounds	35
2.4 Intelligent packaging	37
2.4.1 Gas indicators and sensors	37
2.4.2 Time-temperature indicators	38
2.4.3 Freshness/spoilage indicators	38
2.4.4 Biosensors/nanosensors	39
2.4.5 Radio frequency identification	39
2.5 Nanotechnology in active and intelligent packaging	39
2.6 Future trends	41
2.7 Further sources of information	42
References	42
3 Modified-Atmosphere Storage of Foods	49
Osman Erkmén	
3.1 Introduction	49
3.2 Modified atmosphere	50
3.2.1 Types of modified-atmosphere techniques	50
3.2.2 Gases used for modification of atmosphere	54
3.3 Effects of modified gas atmospheres on microorganisms and foods	55
3.3.1 Mechanism of effects	55
3.3.2 Effects of modified atmosphere on spoilage microorganisms	57
3.3.3 Effects of modified atmosphere on microorganisms that cause food poisoning	57
3.4 Application of modified atmospheres for food preservation	60
3.4.1 Meat and meat products	60
3.4.2 Seafoods	61
3.4.3 Dairy products	61
3.4.4 Bakery products	61
3.4.5 Dried food products	62
3.4.6 Fruits and vegetables	62
3.5 Food safety and future outlook	63
3.6 Conclusions	63
References	64

4	Effects of Combined Treatments with Modified-Atmosphere Packaging on Shelf-Life Improvement of Food Products	67
	Shengmin Lu and Qile Xia	
4.1	Introduction	67
4.2	Physical treatments	68
4.2.1	Low temperature	68
4.2.2	High pressure	70
4.2.3	Radiation	72
4.2.4	Heat treatment	73
4.2.5	Films	74
4.3	Chemical treatments	75
4.3.1	Chemical sanitizers and preservatives	75
4.4	Quality-improving agents	82
4.5	Antibrowning agents	83
4.6	Natural products	84
4.7	Other methods, such as oxygen scavengers and coatings	89
4.8	Biocontrol	90
4.8.1	Bacterial antagonists	90
4.8.2	Yeast antagonists	92
	References	96
5	Coating Technology for Food Preservation	111
	Chamorn Chawengkijwanich and Phikunthong Kopermsub	
5.1	Introduction	111
5.2	Progress in relevant materials and their applications in coating	112
5.2.1	Active agents for coating	112
5.2.2	Controlled release of active agents	114
5.2.3	Multifunctional surface-coating materials	117
5.2.4	Nutraceutical coatings	118
5.3	Progress in coating methodology	118
5.4	Future trends in coating technology	121
5.5	Conclusions	122
	References	123
	Part II Novel Decontamination Techniques	129
6	Biological Materials and Food-Drying Innovations	131
	Habib Kocabyik	
6.1	Introduction	131
6.2	Microwave drying	133
6.3	Radio frequency drying	134
6.4	Infrared drying	136
6.5	Refractance window TM drying	138
	References	139

7 Atmospheric Freeze Drying	143
Shek Mohammad Atiqure Rahman and Arun S. Mujumdar	
7.1 Introduction	143
7.2 Basic principles	144
7.3 Types of atmospheric freeze dryer and application	146
7.3.1 Fluid-bed freeze drying	146
7.3.2 Tunnel freeze drying	146
7.3.3 Atmospheric spray-freeze drying	147
7.3.4 Heat-pump technology	148
7.4 A novel approach to AFD	149
7.4.1 Experimental results	150
7.5 Model	156
7.5.1 Assumptions	156
7.5.2 Governing equations	157
7.6 Conclusions	158
References	159
8 Osmotic Dehydration: Theory, Methodologies, and Applications in Fish, Seafood, and Meat Products	161
Ioannis S. Arvanitoyannis, Agapi Veikou, and Panagiota Panagiotaki	
8.1 Introduction	161
8.1.1 Determination of physical characteristics	163
8.2 Methods of drying	165
8.2.1 Sun drying/solar drying	165
8.2.2 Air and contact drying under atmospheric pressure	165
8.2.3 Freeze drying	165
8.2.4 Osmotic dehydration	166
8.2.5 Vacuum osmotic dehydration	166
8.2.6 Vacuum impregnation	166
8.2.7 Pulse VOD	167
8.2.8 Traditional meat smoking	167
8.2.9 Meat treatments by soaking	167
8.3 Some results	168
8.4 Conclusions	186
References	188
9 Dehydration of Fruit and Vegetables in Tropical Regions	191
Salim-ur-Rehman and Javaid Aziz Awan	
9.1 Introduction	191
9.2 Forms of water	192
9.2.1 Role of water in food	192
9.3 Advantages of dried foods	192
9.4 Drying processes	193
9.4.1 Sun drying/solar drying of fruit and vegetables	193
9.4.2 Solar driers	194

9.4.3	Drying under shade	195
9.4.4	Osmotic drying	195
9.5	Dehydration	196
9.5.1	Drying conditions	196
9.5.2	Factors affecting evaporation of water from food surfaces	196
9.5.3	Types of dehydrator	197
9.6	Evaporation and concentration	200
9.6.1	Freeze drying	201
9.6.2	Dehydro-freezing	201
9.6.3	Intermediate-moisture food technology	202
9.7	Spoilage of dried fruits and vegetables	203
9.8	Merits of dehydration over sun drying	203
9.9	Effects of dehydration on nutritive value of fruits and vegetables	204
9.10	Effects of drying on microorganisms	204
9.11	Effect of drying on enzyme activity	205
9.12	Influence of drying on pigments	205
9.13	Reconstitution test	205
9.14	Drying parameters	208
	References	208
10	Developments in the Thermal Processing of Food	211
	Tareq M. Osaili	
10.1	Introduction	211
10.2	Thermal processing	212
10.2.1	Thermal inactivation kinetics	212
10.2.2	Process lethality of thermal process	213
10.2.3	Requirement of thermal process	214
10.2.4	Process verification/validation	214
10.3	Innovative thermal processing techniques	215
10.3.1	Indirect electroheating techniques: radio frequency and microwave	215
10.3.2	Direct electroheating techniques: ohmic heating	224
	References	227
11	Ozone in Food Preservation	231
	Bülent Zorlugenç and Feyza Kiroğlu Zorlugenç	
11.1	Introduction	231
11.2	History	232
11.3	Chemistry	232
11.3.1	Solubility	233
11.3.2	Stability	233
11.3.3	Reactivity	233
11.4	Generation	233
11.5	Antimicrobial effect	234
11.5.1	Inactivation spectrum	235
11.5.2	Influencing factors	236

11.6	Applications	236
11.6.1	Red meat	236
11.6.2	Poultry	237
11.6.3	Seafood	237
11.6.4	Fruit and vegetables	238
11.6.5	Cereals	239
11.6.6	Pesticides	239
11.6.7	Mycotoxins	240
11.6.8	Food-processing equipment	240
11.7	Toxicity and safety of personnel	241
11.8	Conclusion	241
	References	242
12	Application of High Hydrostatic Pressure Technology for Processing and Preservation of Foods	247
	Hudaa Neetoo and Haiqiang Chen	
12.1	Introduction	247
12.2	The working principles of high hydrostatic pressure	248
12.3	Microbial inactivation by high hydrostatic pressure	249
12.3.1	Effect of high pressure on bacterial cell membrane	249
12.3.2	Effect of high pressure on bacterial cell morphology	249
12.3.3	Effect of high pressure on biochemical and enzymatic processes in microorganisms	251
12.4	Effect of high pressure on the physical and biochemical characteristics of food systems	251
12.5	Applications of high hydrostatic pressure to specific food commodities	253
12.5.1	Effect of high hydrostatic pressure on muscle foods	254
12.5.2	Effect of high hydrostatic pressure processing on fishery products	257
12.5.3	Effect of high hydrostatic pressure processing on milk and dairy products	259
12.5.4	Effect of high hydrostatic pressure on eggs and egg products	262
12.5.5	Effect of high hydrostatic pressure on fruit and vegetable products	264
12.6	Conclusions	268
	References	268
13	Pulsed Electric Fields for Food Preservation: An Update on Technological Progress	277
	Abdorreza Mohammadi Nafchi, Rajeev Bhat, and Abd Karim Alias	
13.1	Introduction	277
13.2	Historical background of pulsed electric fields	278
13.3	Pulsed electric field processing	278
13.4	Mechanisms and factors affecting pulsed electric fields	279
13.4.1	Increase in transmembrane potential	279

13.4.2	Pore-initiation stage	279
13.4.3	Evolution of the pore population	280
13.4.4	Pore resealing or cell death	280
13.5	Pulsed electric field applications in food processing	280
13.6	Nanosecond pulsed electric fields	281
13.7	Impacts of pulsed electric fields on antioxidant features	282
13.7.1	Antioxidants and vitamin C	282
13.7.2	Carotenoids and vitamin A	285
13.8	Effects of pulsed electric fields on solid textures	286
13.9	Starch modification by pulsed electric fields	286
13.10	Conclusions	289
	References	289
14	Salting Technology in Fish Processing	297
	Hülya Turan and Ibrahim Erkoyuncu	
14.1	Introduction	297
14.1.1	Purpose and principles of salting	297
14.2	Process steps in salting technology	298
14.2.1	Salt quality	298
14.2.2	Fish preparation	299
14.2.3	Salting methods	299
14.2.4	Additives used in the salting process	304
14.3	Factors affecting the penetration of salt	304
14.3.1	Salting method	304
14.3.2	Salt concentration	304
14.3.3	Salt quality	304
14.3.4	Fish freshness	305
14.3.5	Amount of fat	306
14.3.6	Size of the fish	306
14.3.7	Temperature	306
14.4	Ripening of salted fish	307
14.4.1	Storage of salted fish	308
14.4.2	Undesirable changes in salted products	309
14.5	Conclusion	312
	References	312
15	Hypoxanthine Levels, Chemical Studies and Bacterial Flora of Alternate Frozen/Thawed Market-Simulated Marine Fish Species	315
	Olusegun A. Oyelese	
15.1	Introduction	315
15.2	Sources of contamination of fish	316
15.3	Fish as a perishable food	316
15.3.1	Autolytic spoilage	317
15.3.2	Microbiological spoilage	317
15.4	Indicators of deterioration in frozen fish	318
15.5	Bacterial food poisoning in seafood	318

15.6	Methods used for assessing deteriorative changes in fish	319
15.6.1	Organoleptic or sensory assessment	320
15.6.2	Chemical assessment	320
15.6.3	Bacteriological assessment (microbiological analysis)	322
15.7	Study of three marine fish species	323
15.7.1	Proximate composition of marine fish samples	323
15.7.2	Results of bacteriological assessment	324
15.8	Conclusions	328
	References	328
16	Preservation of Cassava (<i>Manihot esculenta</i> Crantz): A Major Crop to Nourish People Worldwide	331
	G.J. Benoit Gnonlonfin, Ambaliou Sanni and Leon Brimer	
16.1	Introduction: cassava production and importance	331
16.2	Nutritional value	331
16.3	Cassava utilization	332
16.4	Factors that limit cassava utilization, and its toxicity	333
16.5	Cassava processing	336
16.5.1	Description of some cassava-based products	336
16.6	Storage of processed cassava products	339

20.3.2	Impact of storage atmosphere of the food	421
20.4	Implicit factors	423
20.4.1	Antagonism	423
20.4.2	Synergism	424
20.5	Processing factors	424
20.6	Interaction between factors	425
	References	426

21 A Whole-Chain Approach to Food Safety Management and Quality Assurance of Fresh Produce	429
Hans Rediers, Inge Hanssen, Matthew S. Krause, Ado Van Assche, Raf De Vis, Rita Moloney and Kris A. Willems	
21.1 Introduction: the management of food safety requires a holistic approach	429
21.2 Microbial quality management starts in production	431
21.3 Processing of fresh produce is a key step in quality preservation	433
21.3.1 Hand hygiene	433
21.3.2 The use of at-line microbial monitoring in food processing	434
21.4 Monitoring the entire food supply chain	437
21.4.1 Temperature management in the cold chain	437
21.4.2 Construction of a microbiological database as a tool for process control	441
21.5 The improvement of compliance by increasing awareness	442
21.6 Last but not least: consumers	443
21.7 Conclusion	444
References	445
Part IV Use of Natural Preservatives	451
22 Food Bioprotection: Lactic Acid Bacteria as Natural Preservatives	453
Graciela Vignolo, Lucila Saavedra, Fernando Sesma, and Raúl Raya	
22.1 Introduction	453
22.2 Antimicrobial potential of LAB	455
22.3 Bacteriocins	456
22.3.1 Biosynthetic pathways	457
22.4 Food applications	458
22.4.1 Bioprotection of meat, poultry, and seafood products	459
22.4.2 Bioprotection of dairy products	463
22.4.3 Bioprotection of vegetable products	464
22.5 Hurdle technology to enhance food safety	468
22.6 Bacteriocins in packaging films	471
22.7 Conclusions	473
