<b>Chapter 1 Growth of Muscle from the Myoblast to Whole Muscle</b>	<b>1</b>
Terry Brandebourg	
Introduction	1
Overview of Skeletal Muscle Development	1
Types of Muscle	2
Structure of Muscle	3
Organization of Whole Muscle	4
Fiber-Type Development	5
Hyperplasia (Prenatal Muscle Development)	6
Overview	6
Embryogenesis of Muscle	7
Myogenesis	9
Biphasic Fiber Formation	12
Hypertrophy (Postnatal Muscle Development)	12
Satellite Cells	14
Protein Turnover	14
Protein Synthesis	15
Protein Degradation	15
Muscle Cell Culture	16
Basic Concepts of Cell Culture	17
Culture of Established Muscle Cell Lines—Murine C2C12 Myoblasts	20
Propagation	21
Subculturing	21
Cell Quantification	22
Induction of Differentiation and Fusion	22
Cryopreservation	23
Thawing Cryopreserved Stocks	24
References	25

<b>Chapter 2</b>	<b>Animal Growth and Empty Body Composition</b>	<b>29</b>
	Michael Dikeman	
	Composition of the Empty Body from Birth to Harvest	29
	Chemical Composition	33
	Physical Separation	37
	Magnetic Resonance Imaging	38
	X-Ray Computed Tomography Scanning	39
	Near-Infrared Reflectance	39
	Total Body Electromagnetic Conductivity (TOBEC)	40
	Dual-Energy X-Ray Absorptiometry	40
	Video Image Analysis	42
	<sup>40</sup> K Liquid Scintillation Counter	43
	Dilution Techniques	44
	Ultrasound Technology	44
	Specific Gravity	45
	Carcass Yields of Closely Trimmed Retail Product or Fat-Free Lean	45
	Summary	46
	References	46
<b>Chapter 3</b>	<b>Muscle Structure and Cytoskeletal Proteins</b>	<b>49</b>
	Chris R. Kerth	
	Introduction	49
	Connective Tissue	49
	Organizational Structure of Muscle	53
	Muscle Cell Structure	54
	Proteins of the Muscle	56
	Contractile Proteins	56
	Z-disk Protein	59
	Gap Filaments	59
	Intermediate Filaments	60
	Costameric Proteins	60
	Isolating Myofibrillar Proteins	60
	Purifying Myofibrils	60
	Procedure	61
	Result	62
	References	63
<b>Chapter 4</b>	<b>Muscle Metabolism and Contraction</b>	<b>65</b>
	Chris R. Kerth	
	Introduction	65
	Metabolism	65
	Glycolysis	65
	Oxidative Phosphorylation	66
	Muscle Contraction	66
	Nerve Impulse	67
	Relaxation	71

Muscle Fiber Types	71
Fiber Typing Procedure—Combined Stain for Identifying Muscle Fiber Types	73
Principle	73
Solutions	73
Staining Sequence for Bovine	75
Staining Sequence for Ovine	75
Staining Sequence for Porcine	76
Chemicals Needed for Staining Procedures	77
References	77
<b>Chapter 5 Converting Muscle to Meat: The Physiology of Rigor</b>	<b>79</b>
Kirk W. Braden	
Introduction	79
Muscle Metabolism upon Exsanguination	79
Development of Meat Quality	81
Water-Holding Capacity	82
Meat Color	83
Aging and Tenderness	84
Antemortem Factors	85
Genetics	85
Stress and Diet	87
Postmortem Factors	89
Protein Proteolysis	89
Calpains	90
Cathepsins	90
Muscle Ultrastructure	90
Temperature and Chilling	91
Electrical Stimulation	91
Analysis of Muscle pH	92
Taking the Measurement	92
Analysis of Sarcomere Length	93
Solutions	93
0.1 M NaHPO <sub>4</sub> Buffer at pH 7.2	93
0.2 M Sucrose in 0.1 M NaHPO <sub>4</sub> Buffer at pH 7.2	93
Preparation of Muscle for Laser Diffraction	94
Sarcomere Length Determination	94
References	94
<b>Chapter 6 Meat Tenderness</b>	<b>99</b>
Chris R. Kerth	
Introduction	99
What is Tenderness?	99
Factors that Affect Tenderness	100
Sarcomere Contractile State	100
Myofibrillar Protein Degradation	101
Connective Tissue	103
Background Effect	106

Measuring Tenderness	106
Shear Force	106
Sarcomere Length	107
Protein Degradation	109
Connective Tissue	110
MFI Procedure (Myofibrillar Fragmentation Index)	110
References	116
<b>Chapter 7 Water-Holding Capacity of Meat</b>	<b>119</b>
Jason K. Apple and Janeal W.S. Yancey	
Introduction	119
Postmortem Muscle Metabolism and the WHC of Meat	120
Drip Channels and Postmortem Aging	121
Manipulating the WHC of Meat	124
Salt	124
Phosphates	125
Acid Marination	126
Factors Influencing the WHC of Meat	127
Genetics	127
Preslaughter Animal Management	130
Nutrition	131
Carcass/Meat Chilling	133
Electrical Stimulation	133
Methods of Measuring the WHC of Meat	133
Gravitational Drip Loss	134
Drip Tubes	134
Filter-Paper Press	134
Centrifugation	135
References	136
<b>Chapter 8 Lipids and Lipid Oxidation</b>	<b>147</b>
Kyle Willian	
Introduction	147
Structure, Nomenclature, and Classification of Meat Lipids	147
Fatty Acids	148
Neutral Lipids	151
Polar Lipids	152
Saponifiable and Nonsaponifiable Lipids	155
Composition of Lipids in Meat	156
Extraction of Lipids	157
Total Lipids	157
Nonsaponifiable Lipids	158
Analyses	158
Fatty Acid Methyl Esters	158
Chromatography	160
Gas Chromatography	161
High-Performance Liquid Chromatography	165

Lipid Oxidation in Muscle Foods	165
Basic Chemistry of Lipid Oxidation	165
Enzyme and Nonenzyme Reactive Oxygen Species	169
Measurement of Oxidation	170
Volatile Products, Sensory Evaluation, and Headspace Gas	
Chromatography	170
Primary Changes	171
Secondary Changes	171
Procedures	172
TBARS	172
Folch Total Lipids Extraction	172
Direct Transesterification (Methylation) of Fatty Acids	173
Nonsaponifiable (Cholesterol, Fat-Soluble Vitamins) Standard Solutions	173
Extraction and Sample Preparation for Nonsaponifiable Lipids: Cholesterol, Fat-Soluble Vitamins, Carotenoids	174
Gas Chromatography (GC)	174
High-Performance Liquid Chromatography (HPLC)	174
References	175
<b>Chapter 9 Meat Color</b>	<b>177</b>
Richard Mancini	
Introduction	177
Meat Color Chemistry	177
Deoxymyoglobin	177
Oxymyoglobin	180
Carboxymyoglobin	180
Metmyoglobin	180
Oxygen Consumption	180
Metmyoglobin Reduction	181
Deoxygenation and Subsequent Reoxygenation	181
Hemoglobin	181
Antemortem Factors Affecting Meat Color	181
Genetics	182
Postmortem Factors Affecting Meat Color	182
Temperature and Case-Ready Packaging	182
Laboratory Analyses of Raw Meat Surface Color	183
Visual Surface Color Evaluation	184
Instrumental Surface Color Evaluation	186
Determination of Myoglobin Redox State in Meat Extracts	187
Myoglobin Isolation from Beef Samples	187
Preparing Oxymyoglobin in Purified Solutions	188
Preparing Carboxymyoglobin in Purified Solutions	188
Metmyoglobin Reducing Activity (MRA)	189
Aerobic Reducing Activity	189
Oxygen Consumption	190
Surface Myoglobin Oxygenation	190
Depth of Oxygenation	190

	Mitochondrial Isolation and Oxygen Consumption Measurement	191
	Cooked Color	192
	Iridescence	193
	Cured Color and NO-Myoglobin	194
	Bone Marrow Discoloration	194
	New Developments in Color Research Using Proteomics	195
	Conclusion	195

<b>Chapter 14 Preventing Foodborne Illness</b>	<b>249</b>
Michael A. Davis	
Introduction	249
Parameters that Affect Microbial Growth	249
Intrinsic Parameters	249
pH	250
Oxidation–Reduction Potential (Eh)	250
Moisture Content	251
Nutrient Content	252
Antimicrobial Factors	252
Biological Structures	253
Extrinsic Parameters	253
Product Storage Temperature	253
Relative Humidity	253
Atmospheric Conditions	254
Presence of Other Microbes and Their Activity	254
Prevention of Foodborne Illness—Processing Operations and Management Tools	254
Good Manufacturing Practices	254
Facilities and Premises	255
Sanitation	255
Equipment	255
Incoming Material	255
Employees and Personnel	256
Processing Operations	256
Pest Control	256
Hazard Analysis and Critical Control Points	256
Food Safety Objectives and Performance Objectives	257
Chemical Food Protection and Preservation	258
Chemical Sanitizing Agents	258
Chlorine and Chlorine Compounds	258
Electrolyzed Water	259
Ozone	259
Hydrogen Peroxide	259
Acidified Sodium Chlorite	259
Cetylpyridinium Chloride	260
Chemical Preservative Agents	261
Organic Acids (Acetic and Lactic)	261
Sorbic Acid/Sorbates	261
Sulfites and Sulfur Dioxide	262
Propionic Acid/Propionates	262
Nitrites and Nitrates	262
Benzoic Acid	262
Other Chemical Preservatives	262
Ethanol	262
Chitosans	263
Indirect Antimicrobial Chemicals	263

Flavoring Compounds	263
Antioxidant Compounds	264
Phosphates	264
Other Indirect Antimicrobial Chemicals	264
Competitive Exclusion and Interference	264
Prebiotics, Probiotics, Bacteriophages, and Bacteriocins	265
Physical Food Protection and Preservation	265
Modified Atmospheres	265
General Effects of Carbon Dioxide on Microorganisms	265
Modified Atmosphere Packaging	266
Vacuum Packaging	266
Controlled Atmospheres	266
Radiation and the Electromagnetic Spectrum	267
Gamma Rays or Gamma Radiation	267
Electron Beams	268
Ultraviolet Light	269
Microwave Energy	269
High-Temperature Protection	269
Heat Destruction and Thermal Death Time	270
D Value	270
z Value	270
Safe Harbor Lethality and the 12D Concept	271
Low-Temperature Protection	272
Thawing	273
Low-Moisture Protection	273
Microbial Indicators and Sampling Plans	273
Product Quality Prediction by Microbial Numbers	274
Product Safety Prediction by Microbial Numbers	274
Microbial Sampling Plans	275
Attribute Sampling Plans	275
Microbiological Sampling of the Environment	279
Common Microbiological Culturing Methods	279
Most Probable Number Method	280
Plate Count Method	280
Direct Microscopic Count Method	281
Dye Reduction Method	281
Other Microbial Methods	281
