
E-Logistics

Managing your digital supply chains for competitive advantage

Edited by Yingli Wang
and Stephen Pettit

KoganPage

LONDON PHILADELPHIA NEW DELHI

CONTENTS

About the contributors xii

PART ONE E-logistics development 1

01 E-logistics: an introduction 3
Yingli Wang and Stephen Pettit

Definition of e-logistics 4
Historical development 5
The way forward – an overview of the book's structure 20
References 28

02 Supporting ICT infrastructure for future logistics 32
Adrian E Coronado Mondragon, Etienne S Coronado Mondragon and Christian E Coronado Mondragon

ICT and logistics 33
Intelligent transport systems 36
Smart grid 38
The convergence infrastructure for ITS and the smart grid 41
Applications of a convergence infrastructure for ITS and the smart grid 43
Conclusions and future work between ITS and the smart grid 49
References 51

PART TWO E-logistics for transport modes and nodes 55

03 ICT for airfreight management 57
Robert Mayer

Introduction 57
Airfreight: the challenges 58
The airfreight supply chain 60

Customer interfaces 62
Issues 78
Summary and conclusions 83
Notes 83
References 84

04 ICT for rail freight management 85
Allan Woodburn

Introduction 85
Basic principles of ICT in rail freight operations 86
What do rail freight customers want? 88
Tracking and tracing information for customers 89
Other ICT applications that help rail freight to play to its strengths 94
The role of ICT for rail freight in the single European railway area 98
Summary 105
References 106

05 ICT for efficient road freight transport 108
Derek Beevor, with contributions from Ben Clewett

Introduction 108
Skylark 109
Cloud computing 111
Telematic data 113
Data source 114
IT system development 123
Big data 128
Conclusion: the need for greater collaboration? 128
References 129

06 Electronic bills of lading 131
Nikolaos Vasilakis and Rawindaran Nair

Introduction 131
Bills of lading – background 134
Bill of lading as a receipt 135

Bill of lading as evidence of contract of carriage 135
Bill of lading as document of title 136
Background legal framework 136
UNCITRAL Model Law on Electronic Commerce 141
Industry versions of electronic bills of lading 146
Recent global initiatives on electronic commerce 149
Conclusions 150
Notes 151
References 151

07 Port-centric ICT system 154

Tsz Leung Yip, Yingli Wang, Jane Jing Haider and Marten van der Velde

Introduction 154
The importance of ICT to port systems: an academic background 157
The port-centric ICT 159
Information matrix of port-centric ICT 161
ICT investment 162
Port community systems 163
Policy implications 179
Conclusion 181
References 181

PART THREE Automating e-logistics 183

08 B2C e-commerce and fulfilment 185

Sharon Cullinane

Introduction 185
Structural dimensions 186
Market dimensions 189
E-fulfilment dimensions 195
Last-mile dimensions 201
Environmental dimensions 203
Upcoming trends 206
Summary 207
References 207

09 The challenges of e-commerce on warehousing in the future 210

Gwynne Richards

Introduction 210
The challenges 211
Type, size and location of fulfilment centres and warehouses 214
Location of inventory 221
Outsourcing 222
Warehouse operations 222
Technology and automation 224
Conclusion 233
References 234

10 Advanced warehouse management systems and innovations 236

Tim Hotze

Common warehouse functions and why warehouses are needed 236
The evolution of information management in warehouses and distribution centres 242
Core warehouse management system (WMS) features 244
Connectivity of WMS solutions into ERP and information management systems 253
Warehouse control systems and the integration of automation equipment 255
RFID technology to enhance data capture processes in warehouse environments 260
Labour management and workforce systems 263
Summary 267
References 268

11 RFID in logistics 270

Hywel Williams

Introduction 270
Technologies in use 271
Costs and benefits of RFID 277

Potential applications 283
RFID for returnable asset tracking 285
RFID in grocery retailing 286
RFID in fashion retailing 289
Conclusion 297
Summary 299
References 299

12 The role of GS1 in logistics and e-procurement 300
Hywel Williams

Background 300
History 303
Using GS1 codes 303
GS1 keys used in logistics and e-procurement 306
GS1 barcodes 307
Barcode formats 314
GS1 EPCglobal 316
Privacy concerns 320
The global data synchronization network (GDSN) 322
Electronic data interchange 326
Electronic product code information system (EPCIS) 329
GS1 and customs 332
GS1 standards in health care 333
Summary 336
Notes 337

13 Automating a logistics service chain 338
Gilbert Owusu, Sid Shakya, Okung Ntofon and Ali McCormick

Introduction 338
A framework for automating the service chain 340
Implementing a service chain for field and service operations 343
Delivering a networked ecosystem 349
Conclusions and reflections 353
References 354

PART FOUR Regional and global e-logistics 357

14 Regional electronic marketplaces to improve logistics 359
Yingli Wang and Andrew Potter

Introduction 359
Context for the research 360
Electronic logistics marketplaces 360
Perspectives of potential Welsh users 366
Framework for implementing a regional ELM 370
Conclusion 373
References 375

15 Trade and transport electronic single windows 377
Takis Katsoulakos, Yannis Zorgios and Zisis Palaskas

Introduction 377
Trade facilitation SWs 378
Customs-related initiatives 380
EU maritime transport single windows (MSWs) 386
A design and development SW platform 396
Glossary 413
Notes 415

16 Single window systems for global supply chain management 418
Jeong Hugh Han

Overview 418
Global supply chain management and single window systems 419
Concluding remarks 427
References 428

17 End-to-end global visibility and order management for integrated supply and demand chains 429
Tim Hotze

The evolution and need for supply chain management 429
Value chain management and the importance of managing information 432

Common interfaces between supply chain and demand chain stakeholders 436
A three-tiered system of people, processes and systems 439
Common types of purchase orders 440
KPI reporting, interactive dashboards and management by exception 451
Summary 458
Glossary 459

PART FIVE Future outlook 461

18 ICT in multimodal transport and technological trends 463

Irina Harris, Yingli Wang and Haiyang Wang

Introduction 463
Multimodal transport 465
ICT in multimodal transport 467
Barriers related to ICT adoption 473
Technological trends 478
'Big data' and decision support systems for managing multimodal transport 485
Impact evaluation 486
Conclusion 493
Note 494
References 494

Appendix A: EU projects and technological trends 503
Index 505
