

QUANTITATIVE METHODS FOR FINANCE AND INVESTMENTS

John L. Teall and Iftekhar Hasan

 **Blackwell**
Publishing

CONTENTS

<i>Preface</i>	xii
<i>Acknowledgments</i>	xiv
1 Introduction and Overview	1
1.1 The importance of mathematics in finance	1
1.2 Mathematical and computer modeling in finance	2
1.3 Money, securities, and markets	3
1.4 Time value, risk, arbitrage, and pricing	5
1.5 The organization of this book	6
2 A Review of Elementary Mathematics: Functions and Operations	7
2.1 Introduction	7
2.2 Variables, equations, and inequalities	7
2.3 Exponents	8
<i>Application 2.1: Interest and future value</i>	9
2.4 The order of arithmetic operations and the rules of algebra	10
<i>Application 2.2: Initial deposit amounts</i>	11
2.5 The number e	11
2.6 Logarithms	12
<i>Application 2.3: The time needed to double your money</i>	13
2.7 Subscripts	14
2.8 Summations	14
<i>Application 2.4: Mean values</i>	15
2.9 Double summations	16
2.10 Products	17
<i>Application 2.5: Geometric means</i>	17
<i>Application 2.6: The term structure of interest rates</i>	18

2.11	Factorial products	19
	<i>Application 2.7: Deriving the number e</i>	19
2.12	Permutations and combinations	20
	Exercises	21
	Appendix 2.A An introduction to the Excel™ spreadsheet	23
3	A Review of Elementary Mathematics: Algebra and Solving Equations	25
3.1	Algebraic manipulations	25
	<i>Application 3.1: Purchase power parity</i>	27
	<i>Application 3.2: Finding break-even production levels</i>	28
	<i>Application 3.3: Solving for spot and forward interest rates</i>	29
3.2	The quadratic formula	29
	<i>Application 3.4: Finding break-even production levels</i>	30
	<i>Application 3.5: Finding the perfectly hedged portfolio</i>	31
3.3	Solving systems of equations that contain multiple variables	32
	<i>Application 3.6: Pricing factors</i>	35
	<i>Application 3.7: External financing needs</i>	35
3.4	Geometric expansions	38
	<i>Application 3.8: Money multipliers</i>	40
3.5	Functions and graphs	41
	<i>Application 3.9: Utility of wealth</i>	43
	Exercises	44
	Appendix 3.A Solving systems of equations on a spreadsheet	48
4	The Time Value of Money	51
4.1	Introduction and future value	51
4.2	Simple interest	51
4.3	Compound interest	52
4.4	Fractional period compounding of interest	53
	<i>Application 4.1: APY and bank account comparisons</i>	55
4.5	Continuous compounding of interest	56
4.6	Annuity future values	57
	<i>Application 4.2: Planning for retirement</i>	59
4.7	Discounting and present value	60
4.8	The present value of a series of cash flows	61
4.9	Annuity present values	62
	<i>Application 4.3: Planning for retirement, part II</i>	64
	<i>Application 4.4: Valuing a bond</i>	64
4.10	Amortization	65
	<i>Application 4.5: Determining the mortgage payment</i>	66
4.11	Perpetuity models	67
4.12	Single-stage growth models	68
	<i>Application 4.6: Stock valuation models</i>	70

4.13	Multiple-stage growth models	72
	Exercises	73
	Appendix 4.A Time value spreadsheet applications	77
5	Return, Risk, and Co-movement	79
5.1	Return on investment	79
	<i>Application 5.1: Fund performance</i>	81
5.2	Geometric mean return on investment	82
	<i>Application 5.2: Fund performance, part II</i>	83
5.3	Internal rate of return	84
5.4	Bond yields	87
5.5	An introduction to risk	88
5.6	Expected return	88
5.7	Variance and standard deviation	89
5.8	Historical variance and standard deviation	91
5.9	Covariance	93
5.10	The coefficient of correlation and the coefficient of determination	94
	Exercises	95
	Appendix 5.A Return and risk spreadsheet applications	99
6	Elementary Portfolio Mathematics	103
6.1	An introduction to portfolio analysis	103
6.2	Portfolio return	103
6.3	Portfolio variance	104
6.4	Diversification and efficiency	106
6.5	The market portfolio and beta	110
6.6	Deriving the portfolio variance expression	111
	Exercises	113
7	Elements of Matrix Mathematics	115
7.1	An introduction to matrices	115
	<i>Application 7.1: Portfolio mathematics</i>	116
7.2	Matrix arithmetic	117
	<i>Application 7.2: Portfolio mathematics, part II</i>	120
	<i>Application 7.3: Put–call parity</i>	121
7.3	Inverting matrices	123
7.4	Solving systems of equations	125
	<i>Application 7.4: External funding requirements</i>	126
	<i>Application 7.5: Coupon bonds and deriving yield curves</i>	127
	<i>Application 7.6: Arbitrage with riskless bonds</i>	130
	<i>Application 7.7: Fixed income portfolio dedication</i>	131
	<i>Application 7.8: Binomial option pricing</i>	132
7.5	Spanning the state space	133
	<i>Application 7.9: Using options to span the state space</i>	136

Exercises	137
Appendix 7.A Matrix mathematics on a spreadsheet	142
8 Differential Calculus	145
8.1 Functions and limits	145
<i>Application 8.1: The natural log</i>	146
8.2 Slopes, derivatives, maxima, and minima	147
8.3 Derivatives of polynomials	149
<i>Application 8.2: Marginal utility</i>	151
<i>Application 8.3: Duration and immunization</i>	153
<i>Application 8.4: Portfolio risk and diversification</i>	156
8.4 Partial and total derivatives	157
8.5 The chain rule, product rule, and quotient rule	158
<i>Application 8.5: Plotting the Capital Market Line</i>	159
8.6 Logarithmic and exponential functions	165
8.7 Taylor series expansions	166
<i>Application 8.6: Convexity and immunization</i>	167
8.8 The method of Lagrange multipliers	168
<i>Application 8.7: Optimal portfolio selection</i>	170
Exercises	172
Appendix 8.A Derivatives of polynomials	176
Appendix 8.B A table of rules for finding derivatives	177
Appendix 8.C Portfolio risk minimization on a spreadsheet	178
9 Integral Calculus	180
9.1 Antidifferentiation and the indefinite integral	180
9.2 Riemann sums	181
9.3 Definite integrals and areas	185
<i>Application 9.1: Cumulative densities</i>	186
<i>Application 9.2: Expected value and variance</i>	188
<i>Application 9.3: Valuing continuous dividend payments</i>	189
<i>Application 9.4: Expected option values</i>	191
9.4 Differential equations	191
<i>Application 9.5: Security returns in continuous time</i>	193
<i>Application 9.6: Annuities and growing annuities</i>	194
Exercises	195
Appendix 9.A Rules for finding integrals	198
Appendix 9.B Riemann sums on a spreadsheet	199
10 Elements of Options Mathematics	203
10.1 An introduction to stock options	203
10.2 Binomial option pricing: one time period	205
10.3 Binomial option pricing: multiple time periods	207
10.4 The Black–Scholes option pricing model	210
10.5 Puts and valuation	212

10.6	Black–Scholes model sensitivities	213
10.7	Estimating implied volatilities	215
	Exercises	219
<i>References</i>		222
<i>Appendix A</i>	<i>Solutions to Exercises</i>	224
<i>Appendix B</i>	<i>The z-Table</i>	266
<i>Appendix C</i>	<i>Notation</i>	267
<i>Appendix D</i>	<i>Glossary</i>	270
	<i>Index</i>	274
