Wastewater Engineering

Treatment and Reuse

(Fourth Edition)

----- III -----

George Tchobanoglous

Franklin L. Burton

H. David Stensel

	<i>Preface</i>	xxi			
	<i>Acknowledgments</i>	xxv		2-2 Sampling and Analytical Procedures	29
	<i>Foreword</i>	xxvii		<i>Sampling</i>	29
				<i>Methods of Analysis</i>	34
				<i>Units of Measurement for Physical and Chemical Parameters</i>	35
				<i>Useful Chemical Relationships</i>	35
1	Wastewater Engineering: An Overview	1	2-3	Physical Characteristics	42
1-1	Terminology	3		<i>Solids</i>	42
1-2	Impact of Regulations on Wastewater Engineering	3		<i>Particle Size Distribution</i>	48
1-3	Health and Environmental Concerns in Wastewater Management	7		<i>Turbidity</i>	51
1-4	Wastewater Characteristics	9		<i>Color</i>	52
	<i>Improved Analytical Techniques</i>	10		<i>Absorption/Transmittance</i>	52
	<i>Importance of Improved Wastewater Characterization</i>	10		<i>Temperature</i>	54
1-5	Wastewater Treatment	10		<i>Conductivity</i>	56
	<i>Treatment Methods</i>	11		<i>Density, Specific Gravity, and Specific Weight</i>	56
	<i>Current Status</i>	12	2-4	Inorganic Nonmetallic Constituents	57
	<i>New Directions and Concerns</i>	15		<i>pH</i>	57
	<i>Future Trends in Wastewater Treatment</i>	20		<i>Chlorides</i>	59
1-6	Wastewater Reclamation and Reuse	20		<i>Alkalinity</i>	59
	<i>Current Status</i>	21		<i>Nitrogen</i>	60
	<i>New Directions and Concerns</i>	21		<i>Phosphorus</i>	63
	<i>Future Trends in Technology</i>	21		<i>Sulfur</i>	64
1-7	Biosolids and Residuals Management	22		<i>Gases</i>	64
	<i>Current Status</i>	22		<i>Odors</i>	70
	<i>New Directions and Concerns</i>	23	2-5	Metallic Constituents	77
	<i>Future Trends in Biosolids Processing</i>	23		<i>Importance of Metals</i>	77
				<i>Sources of Metals</i>	77
2	Constituents in Wastewater	27		<i>Sampling and Methods of Analysis</i>	77
2-1	Wastewater Constituents	29		<i>Typical Effluent Discharge Limits for Metals</i>	78
	<i>Constituents Found in Wastewater</i>	29	2-6	Aggregate Organic Constituents	80
	<i>Constituents of Concern in Wastewater Treatment</i>	29		<i>Measurement of Organic Content</i>	81
				<i>Biochemical Oxygen Demand (BOD)</i>	81
				<i>Total and Soluble Chemical Oxygen Demand (COD and SCOD)</i>	93
				<i>Total and Dissolved Organic Carbon (TOC and DTOC)</i>	94
				<i>UV-Absorbing Organic Constituents</i>	95

	<i>Theoretical Oxygen Demand (ThOD)</i>	96		<i>Sources and Rates of Industrial</i>	
	<i>Interrelationships between BOD, COD,</i>			<i>(Nondomestic) Wastewater Flows</i>	162
	<i>and TOC</i>	96		<i>Infiltration/Inflow</i>	163
	<i>Oil and Grease</i>	98		<i>Exfiltration from Collection Systems</i>	167
	<i>Surfactants</i>	98		<i>Combined System Flowrates</i>	168
2-7	Individual Organic Compounds	99	3-3	Statistical Analysis of Flowrates,	
	<i>Priority Pollutants</i>	99		<i>Constituent Concentrations, and</i>	
	<i>Analysis of Individual</i>			<i>Mass Loadings</i>	170
	<i>Organic Compounds</i>	100		<i>Common Statistical Parameters</i>	170
	<i>Volatile Organic Compounds (VOCs)</i>	100		<i>Graphical Analysis of Data</i>	171
	<i>Disinfection Byproducts</i>	102	3-4	Analysis of Wastewater Flowrate Data	178
	<i>Pesticides and Agricultural Chemicals</i>	102		<i>Definition of Terms</i>	178
	<i>Emerging Organic Compounds</i>	102		<i>Variations in Wastewater Flowrates</i>	179
2-8	Biological Characteristics	104		<i>Wastewater Flowrate Factors</i>	180
	<i>Microorganisms Found in Surface</i>		3-5	Analysis of Constituent Mass	
	<i>Waters and Wastewater</i>	104		<i>Loading Data</i>	181
	<i>Pathogenic Organisms</i>	109		<i>Wastewater Constituent Concentrations</i>	181
	<i>Use of Indicator Organisms</i>	115		<i>Variations in Constituent Concentrations</i>	185
	<i>Enumeration and Identification</i>			<i>Flow-Weighted Constituent</i>	
	<i>of Bacteria</i>	118		<i>Concentrations</i>	192
	<i>Enumeration and Identification</i>			<i>Calculation of Mass Loadings</i>	194
	<i>of Viruses</i>	126		<i>Effect of Mass Loading Variability</i>	
	<i>Polymerase Chain Reaction (PCR)</i>	129		<i>on Treatment Plant Performance</i>	197
	<i>Development of Microorganisms</i>		3-6	Selection of Design Flowrates and	
	<i>Typing Techniques</i>	130		<i>Mass Loadings</i>	197
	<i>New and Reemerging Microorganisms</i>	130		<i>Design Flowrates</i>	199
2-9	Toxicity Tests	130		<i>Design Mass Loadings</i>	205
	<i>Toxicity Terminology</i>	131			
	<i>Toxicity Testing</i>	133			
	<i>Analysis of Toxicity Test Results</i>	134			
	<i>Application of Toxicity Test Results</i>	136			
	<i>Identification of Toxicity Components</i>	137			
3	Analysis and Selection		4	Introduction to Process	
	of Wastewater			Analysis and Selection	215
	Flowrates and				
	Constituent Loadings	153	4-1	Reactors Used for the Treatment	
3-1	Components of Wastewater Flows	154		<i>of Wastewater</i>	218
3-2	Wastewater Sources and Flowrates	154		<i>Types of Reactors</i>	218
	<i>Domestic Wastewater Sources</i>			<i>Application of Reactors</i>	220
	<i>and Flowrates</i>	155		<i>Hydraulic Characteristics of Reactors</i>	220
	<i>Strategies for Reducing Interior Water</i>		4-2	Mass-Balance Analysis	222
	<i>Use and Wastewater Flowrates</i>	158		<i>The Mass-Balance Principle</i>	222
	<i>Water Use in Developing Countries</i>	162		<i>Preparation of Mass Balances</i>	224
				<i>Application of the Mass-Balance</i>	
				<i>Analysis</i>	224
				<i>Steady-State Simplification</i>	225
			4-3	Modeling Ideal Flow in Reactors	226
				<i>Ideal Flow in Complete-Mix Reactor</i>	226
				<i>Ideal Flow in Plug-Flow Reactor</i>	227

4-4	Analysis of Nonideal Flow in Reactors		<i>Gas-Liquid Mass Transfer</i>	284
	Using Tracers	229	<i>Liquid-Solid Mass Transfer</i>	293
	<i>Factors Leading to Nonideal Flow</i>		4-9 Introduction to Process Selection	297
	in Reactors	229	<i>Important Factors in Process Selection</i>	297
	<i>Need for Tracer Analysis</i>	231	<i>Process Selection Based</i>	
	<i>Types of Tracers</i>	231	on Reaction Kinetics	299
	<i>Conduct of Tracer Tests</i>	231	<i>Process Selection Based</i>	
	<i>Analysis of Tracer Response Curves</i>	233	on Mass Transfer	300
	<i>Practical Interpretation of Tracer</i>		<i>Process Design Based</i>	
	Measurements	242	on Loading Criteria	301
4-5	Modeling Nonideal Flow in Reactors	245	<i>Bench Tests and Pilot-Plant Studies</i>	301
	<i>The Distinction between Molecular</i>		<i>Reliability Considerations in</i>	
	Diffusion, Turbulent Diffusion,		Process Selection	301
	and Dispersion	245		
	<i>Plug-Flow Reactor with</i>			
	Axial Dispersion	246	5 Physical Unit	
	<i>Complete-Mix Reactors in Series</i>	252	Operations	311
4-6	Reactions, Reaction Rates, and		5-1 Screening	315
	Reaction Rate Coefficients	257	<i>Classification of Screens</i>	315
	<i>Types of Reactions</i>	257	<i>Coarse Screens (Bar Racks)</i>	316
	<i>Rate of Reaction</i>	258	<i>Fine Screens</i>	322
	<i>Reaction Order</i>	259	<i>Microscreens</i>	326
	<i>Types of Rate Expressions</i>	260	<i>Screenings Characteristics</i>	
	<i>Rate Expressions Used in</i>		and Quantities	327
	Environmental Modeling	261	5-2 Coarse Solids Reduction	330
	<i>Effects of Temperature on Reaction</i>		<i>Comminutors</i>	331
	Rate Coefficients	261	<i>Macerators</i>	332
	<i>Analysis of Reaction Rate Coefficients</i>	264	<i>Grinders</i>	333
4-7	Modeling Treatment Process Kinetics	269	<i>Design Considerations</i>	333
	<i>Batch Reactor with Reaction</i>	269	5-3 Flow Equalization	333
	<i>Complete-Mix Reactor with Reaction</i>	270	<i>Description/Application</i>	333
	<i>Complete-Mix Reactors in Series</i>		<i>Design Considerations</i>	335
	with Reaction	271	5-4 Mixing and Flocculation	344
	<i>Ideal Plug-Flow Reactor</i>		<i>Continuous Rapid Mixing in</i>	
	with Reaction	274	Wastewater Treatment	345
	<i>Comparison of Complete-Mix and</i>		<i>Continuous Mixing in</i>	
	Plug-Flow Reactors with Reaction	275	Wastewater Treatment	345
	<i>Ideal Plug-Flow Reactor with</i>		<i>Energy Dissipation in Mixing</i>	
	Retarded Reaction	277	and Flocculation	347
	<i>Plug-Flow Reactor with Axial</i>		<i>Timescale in Mixing</i>	350
	Dispersion and Reaction	279	<i>Types of Mixers Used for Rapid Mixing</i>	
	<i>Other Reactor Flow Regimes and</i>		in Wastewater Treatment	350
	Reactor Combinations	281	<i>Types of Mixers Used for Flocculation</i>	
4-8	Treatment Processes Involving		in Wastewater Treatment	355
	Mass Transfer	283	<i>Types of Mixers Used for Continuous</i>	
	<i>Basic Principle of Mass Transfer</i>	283	Mixing in Wastewater Treatment	359

	<i>New Developments in Mixing Technology</i>	361		<i>Mechanical Aerators</i>	443
5-5	<i>Gravity Separation Theory</i>	361		<i>Energy Requirement for Mixing in Aeration Systems</i>	448
	<i>Description</i>	362		<i>Generation and Dissolution of High-Purity Oxygen</i>	448
	<i>Particle Settling Theory</i>	363		<i>Postaeration</i>	452
	<i>Discrete Particle Settling</i>	367	5-13	<i>Removal of Volatile Organic Compounds (VOCs) by Aeration</i>	456
	<i>Flocculent Particle Settling</i>	372		<i>Emission of VOCs</i>	456
	<i>Inclined Plate and Tube Settling</i>	374		<i>Mass Transfer Rates for VOCs</i>	457
	<i>Hindered (Zone) Settling</i>	378		<i>Mass Transfer of VOCs from Surface and Diffused-Air Aeration Processes</i>	459
	<i>Compression Settling</i>	383		<i>Control Strategies for VOCs</i>	463
	<i>Gravity Separation in an Accelerated Flow Field</i>	383			
5-6	<i>Grit Removal</i>	384	6	Chemical Unit Processes	475
	<i>Types of Grit Chambers</i>	385			
	<i>Horizontal-Flow Grit Chambers</i>	385	6-1	<i>Role of Chemical Unit Processes in Wastewater Treatment</i>	476
	<i>Aerated Grit Chambers</i>	386		<i>Application of Chemical Unit Processes</i>	477
	<i>Vortex-Type Grit Chambers</i>	392		<i>Considerations in the Use of Chemical Unit Processes</i>	478
	<i>Solids (Sludge) Degritting</i>	392	6-2	<i>Fundamentals of Chemical Coagulation</i>	478
	<i>Grit Characteristics, Quantities, Processing, and Disposal</i>	394		<i>Basic Definitions</i>	479
5-7	<i>Primary Sedimentation</i>	396		<i>Nature of Particles in Wastewater</i>	480
	<i>Description</i>	397		<i>Development and Measurement of Surface Charge</i>	481
	<i>Sedimentation Tank Performance</i>	405		<i>Particle-Particle Interactions</i>	482
	<i>Design Considerations</i>	406		<i>Particle Destabilization with Potential- Determining Ions and Electrolytes</i>	483
	<i>Characteristics and Quantities of Solids (Sludge) and Scum</i>	411		<i>Particle Destabilization and Aggregation with Polyelectrolytes</i>	485
5-8	<i>High-Rate Clarification</i>	411		<i>Particle Destabilization and Removal with Hydrolyzed Metal Ions</i>	486
	<i>Enhanced Particle Flocculation</i>	412	6-3	<i>Chemical Precipitation for Improved Plant Performance</i>	493
	<i>Analysis of Ballasted Particle Flocculation and Settling</i>	412		<i>Chemical Reactions in Wastewater Precipitation Applications</i>	493
	<i>Process Application</i>	414		<i>Enhanced Removal of Suspended Solids in Primary Sedimentation</i>	497
5-9	<i>Large-Scale Swirl and Vortex Separators for Combined Wastewater and Stormwater</i>	417		<i>Independent Physical- Chemical Treatment</i>	498
5-10	<i>Flotation</i>	419		<i>Estimation of Sludge Quantities from Chemical Precipitation</i>	499
	<i>Description</i>	419	6-4	<i>Chemical Precipitation for Phosphorus Removal</i>	500
	<i>Design Considerations for Dissolved-Air Flotation Systems</i>	422			
5-11	<i>Oxygen Transfer</i>	425			
	<i>Description</i>	425			
	<i>Evaluation of Oxygen Transfer Coefficient</i>	425			
5-12	<i>Aeration Systems</i>	430			
	<i>Types of Aeration Systems</i>	430			
	<i>Diffused-Air Aeration</i>	430			

	<i>Chemistry of Phosphate Precipitation</i>	501
	<i>Strategies for Phosphorus Removal</i>	503
	<i>Phosphorus Removal Using Metal Salts and Polymers</i>	505
	<i>Phosphorus Removal Using Lime</i>	507
	<i>Phosphorus Removal with Effluent Filtration</i>	508
	<i>Comparison of Chemical Phosphorus Removal Processes</i>	508
	<i>Estimation of Sludge Quantities from Phosphorus Precipitation</i>	509
6-5	Chemical Precipitation for Removal of Heavy Metals and Dissolved Inorganic Substances	514
	<i>Precipitation Reactions</i>	514
	<i>Coprecipitation with Phosphorus</i>	517
6-6	Chemical Oxidation	517
	<i>Fundamentals of Chemical Oxidation</i>	517
	<i>Applications</i>	522
	<i>Chemical Oxidation of BOD and COD</i>	523
	<i>Chemical Oxidation of Ammonia</i>	524
6-7	Chemical Neutralization, Scale Control, and Stabilization	526
	<i>pH Adjustment</i>	526
	<i>Analysis of Scaling Potential</i>	528
	<i>Scaling Control</i>	532
	<i>Stabilization</i>	532
6-8	Chemical Storage, Feeding, Piping, and Control Systems	532
	<i>Chemical Storage and Handling</i>	533
	<i>Dry Chemical-Feed Systems</i>	533
	<i>Liquid Chemical-Feed Systems</i>	536
	<i>Gas Chemical-Feed Systems</i>	537
	<i>Initial Chemical Mixing</i>	540

7	Fundamentals of Biological Treatment	545			
7-1	Overview of Biological Wastewater Treatment	547			
	<i>Objectives of Biological Treatment</i>	548			
	<i>Some Useful Definitions</i>	548			
	<i>Role of Microorganisms in Wastewater Treatment</i>	548			
	<i>Types of Biological Processes for Wastewater Treatment</i>	551			
7-2	Composition and Classification of Microorganisms	555			
	<i>Cell Components</i>	555			
	<i>Cell Composition</i>	557			
	<i>Environmental Factors</i>	558			
	<i>Microorganism Identification and Classification</i>	559			
	<i>Use of Molecular Tools</i>	561			
7-3	Introduction to Microbial Metabolism	563			
	<i>Carbon and Energy Sources for Microbial Growth</i>	563			
	<i>Nutrient and Growth Factor Requirements</i>	565			
7-4	Bacterial Growth and Energetics	565			
	<i>Bacterial Reproduction</i>	566			
	<i>Bacterial Growth Patterns in a Batch Reactor</i>	566			
	<i>Bacterial Growth and Biomass Yield</i>	567			
	<i>Measuring Biomass Growth</i>	567			
	<i>Estimating Biomass Yield and Oxygen Requirements from Stoichiometry</i>	568			
	<i>Estimating Biomass Yield from Bioenergetics</i>	571			
	<i>Stoichiometry of Biological Reactions</i>	578			
	<i>Biomass Synthesis Yields for Different Growth Conditions</i>	579			
	<i>Observed versus Synthesis Yield</i>	580			
7-5	Microbial Growth Kinetics	580			
	<i>Microbial Growth</i>				
	<i>Kinetics Terminology</i>	581			
	<i>Rate of Utilization of Soluble Substrates</i>	581			
	<i>Other Rate Expressions for the Utilization of Soluble Substrate</i>	582			
	<i>Rate of Soluble Substrate Production from Biodegradable Particulate Organic Matter</i>	583			
	<i>Rate of Biomass Growth with Soluble Substrates</i>	584			
	<i>Kinetic Coefficients for Substrate Utilization and Biomass Growth</i>	584			
	<i>Rate of Oxygen Uptake</i>	585			
	<i>Effects of Temperature</i>	585			
	<i>Total Volatile Suspended Solids and Active Biomass</i>	586			
	<i>Net Biomass Yield and Observed Yield</i>	587			
	7-6 Modeling Suspended Growth Treatment Processes	588			
	<i>Description of Suspended Growth Treatment Processes</i>	589			
	<i>Biomass Mass Balance</i>	589			
	<i>Substrate Mass Balance</i>	592			
	<i>Mixed Liquor Solids Concentration and Solids Production</i>	592			
	<i>The Observed Yield</i>	595			
	<i>Oxygen Requirements</i>	595			
	<i>Design and Operating Parameters</i>	598			
	<i>Process Performance and Stability</i>	600			
	<i>Modeling Plug-Flow Reactors</i>	601			
	7-7 Substrate Removal in Attached Growth Treatment Processes	602			
	<i>Substrate Flux in Biofilms</i>	604			
	<i>Substrate Mass Balance for Biofilm</i>	605			
	<i>Substrate Flux Limitations</i>	606			
	7-8 Aerobic Biological Oxidation	607			
	<i>Process Description</i>	608			
	<i>Microbiology</i>	608			

	<i>Stoichiometry of Aerobic Biological Oxidation</i>	609		<i>Historical Development</i>	661
	<i>Growth Kinetics</i>	610		<i>Description of Basic Process</i>	661
	<i>Environmental Factors</i>	610		<i>Evolution of the Activated-Sludge Process</i>	663
7-9	Biological Nitrification	611		<i>Recent Process Developments</i>	664
	<i>Process Description</i>	611	8-2	Wastewater Characterization	666
	<i>Microbiology</i>	611		<i>Key Wastewater Constituents for Process Design</i>	666
	<i>Stoichiometry of Biological Nitrification</i>	612		<i>Measurement Methods for Wastewater Characterization</i>	671
	<i>Growth Kinetics</i>	614		<i>Recycle Flows and Loadings</i>	676
	<i>Environmental Factors</i>	615	8-3	Fundamentals of Process Analysis and Control	676
7-10	Biological Denitrification	616		<i>Process Design Considerations</i>	677
	<i>Process Description</i>	616		<i>Process Control</i>	689
	<i>Microbiology</i>	618		<i>Operational Problems</i>	694
	<i>Stoichiometry of Biological Denitrification</i>	619		<i>Activated-Sludge Selector Processes</i>	700
	<i>Growth Kinetics</i>	621	8-4	Processes for BOD Removal and Nitrification	703
	<i>Environmental Factors</i>	623		<i>Process Design Considerations</i>	704
7-11	Biological Phosphorus Removal	623		<i>Complete-Mix Activated-Sludge Process</i>	705
	<i>Process Description</i>	624		<i>Sequencing Batch Reactor Process</i>	720
	<i>Microbiology</i>	625		<i>Staged Activated-Sludge Process</i>	734
	<i>Stoichiometry of Biological Phosphorus Removal</i>	627		<i>Alternative Processes for BOD Removal and Nitrification</i>	738
	<i>Growth Kinetics</i>	629		<i>Process Design Parameters</i>	740
	<i>Environmental Factors</i>	629		<i>Process Selection Considerations</i>	740
7-12	Anaerobic Fermentation and Oxidation	629	8-5	Processes for Biological Nitrogen Removal	749
	<i>Process Description</i>	630		<i>Overview of Biological Nitrogen-Removal Processes</i>	750
	<i>Microbiology</i>	631		<i>Single-Sludge Biological Nitrogen-Removal Processes</i>	750
	<i>Stoichiometry of Anaerobic Fermentation and Oxidation</i>	633		<i>Process Design Considerations</i>	753
	<i>Growth Kinetics</i>	634		<i>Anoxic/Aerobic Process Design</i>	761
	<i>Environmental Factors</i>	635		<i>Step-Feed Anoxic/Aerobic Process Design</i>	765
7-13	Biological Removal of Toxic and Recalcitrant Organic Compounds	635		<i>Intermittent Aeration Process Design</i>	776
	<i>Development of Biological Treatment Methods</i>	635		<i>Postanoxic Endogenous Denitrification</i>	780
	<i>Anaerobic Degradation</i>	637		<i>Sequencing Batch Reactor Process Analysis</i>	781
	<i>Aerobic Biodegradation</i>	638		<i>Postanoxic Denitrification with an External Carbon Source</i>	784
	<i>Abiotic Losses</i>	638		<i>Nitrogen Removal in Anaerobic Digestion Recycle Streams</i>	788
	<i>Modeling Biotic and Abiotic Losses</i>	640			
7-14	Biological Removal of Heavy Metals	644			
8	Suspended Growth Biological Treatment Processes	659			
8-1	Introduction to the Activated-Sludge Process	661			

	<i>Alternative Process Configurations for Biological Nitrogen Removal</i>	789		<i>Evolution of Attached Growth Processes</i>	888
	<i>Process Design Parameters</i>	789		<i>Mass Transfer Limitations</i>	890
	<i>Process Selection Considerations</i>	789	9-2	<i>Trickling Filters</i>	890
8-6	<i>Processes for Biological Phosphorus Removal</i>	799		<i>Trickling Filter Classification and Applications</i>	893
	<i>Biological Phosphorus-Removal Processes</i>	799		<i>Design of Physical Facilities</i>	896
	<i>Process Design Considerations</i>	801		<i>Process Design Considerations</i>	909
	<i>Process Control</i>	804	9-3	<i>Nitrification Design</i>	922
	<i>Solids Separation Facilities</i>	805		<i>Rotating Biological Contactors</i>	930
	<i>Methods to Improve Phosphorus-Removal Efficiency in BPR Systems</i>	805		<i>Process Design Considerations</i>	932
	<i>Biological Phosphorus-Removal Process Performance</i>	807		<i>Physical Facilities for RBC Process</i>	935
	<i>Alternative Processes for Biological Phosphorous Removal</i>	809	9-4	<i>RBC Process Design</i>	937
	<i>Process Design Parameters</i>	809		<i>Combined Aerobic Treatment Processes</i>	940
	<i>Process Selection Considerations</i>	809		<i>Trickling Filter/Solids Contact and Trickling Filter/Activated-Sludge Processes</i>	940
8-7	<i>Selection and Design of Physical Facilities for Activated-Sludge Processes</i>	816		<i>Activated Biofilter and Biofilter Activated-Sludge Processes</i>	943
	<i>Aeration System</i>	816		<i>Series Trickling Filter-Activated-Sludge Process</i>	944
	<i>Aeration Tanks and Appurtenances</i>	816		<i>Design Considerations for Combined Trickling Filter Activated-Sludge Systems</i>	944
	<i>Solids Separation</i>	820	9-5	<i>Activated Sludge with Fixed-Film Packing</i>	952
	<i>Design of Solids Separation Facilities</i>	833		<i>Processes with Internal Suspended Packing for Attached Growth</i>	952
8-8	<i>Suspended Growth Aerated Lagoons</i>	840		<i>Processes with Internal Fixed Packing for Attached Growth</i>	955
	<i>Types of Suspended Growth Aerated Lagoons</i>	841		<i>Submerged Attached Growth Processes</i>	957
	<i>Process Design Considerations for Flow-Through Lagoons</i>	843		<i>Downflow Submerged Attached Growth Processes</i>	957
	<i>Dual-Powered Flow-Through Lagoon System</i>	853	9-6	<i>Upflow Submerged Attached Growth Processes</i>	959
8-9	<i>Biological Treatment with Membrane Separation</i>	854		<i>Fluidized-Bed Bioreactors (FBBR)</i>	961
	<i>Overview of Membrane Biological Reactors</i>	854	9-7	<i>Attached Growth</i>	
	<i>Process Description</i>	855		<i>Denitrification Processes</i>	962
	<i>Membrane Fouling Control</i>	857		<i>Downflow Packed-Bed Postanoxic Denitrification Processes</i>	962
	<i>Process Capabilities</i>	858		<i>Upflow Packed-Bed Postanoxic Denitrification Reactors</i>	967
8-10	<i>Simulation Design Models</i>	859		<i>Fluidized-Bed Reactors for Postanoxic Denitrification</i>	967
	<i>Model Matrix Format, Components, and Reactions</i>	860		<i>Submerged Rotating Biological Contactors</i>	969
	<i>Model Applications</i>	861		<i>Attached Growth Preanoxic Denitrification Processes</i>	969
9	Attached Growth and Combined Biological Treatment Processes	887			
9-1	<i>Background</i>	888			

10	Anaerobic Suspended and Attached Growth Biological Treatment Processes	983	11	Advanced Wastewater Treatment	1035
10-1	The Rationale for Anaerobic Treatment	984	11-1	Need for Advanced Wastewater Treatment	1037
	<i>Advantages of Anaerobic Treatment Processes</i>	984	11-2	Technologies Used for Advanced Treatment	1038
	<i>Disadvantages of Anaerobic Treatment Processes</i>	986		<i>Residual Constituents in Treated Wastewater</i>	1038
	<i>Summary Assessment</i>	986		<i>Classification of Technologies</i>	1038
10-2	General Design Considerations for Anaerobic Treatment Processes	986		<i>Removal of Organic and Inorganic Colloidal and Suspended Solids</i>	1038
	<i>Characteristics of the Wastewater Solids Retention Time</i>	987		<i>Removal of Dissolved Organic Constituents</i>	1040
	<i>Expected Methane Gas Production</i>	992		<i>Removal of Dissolved Inorganic Constituents</i>	1041
	<i>Treatment Efficiency Needed</i>	994		<i>Removal of Biological Constituents</i>	1043
	<i>Sulfide Production</i>	994		<i>Process Selection and Performance Data</i>	1044
	<i>Ammonia Toxicity</i>	995	11-3	Introduction to Depth Filtration	1044
	<i>Liquid-Solids Separation</i>	996		<i>Description of the Filtration Process</i>	1044
10-3	Anaerobic Suspended Growth Processes	996		<i>Filter Hydraulics</i>	1050
	<i>Complete-Mix Process</i>	997		<i>Analysis of the Filtration Process</i>	1057
	<i>Anaerobic Contact Process</i>	997	11-4	Selection and Design Considerations for Depth Filters	1069
	<i>Anaerobic Sequencing Batch Reactor</i>	999		<i>Available Filtration Technologies</i>	1069
	<i>Design of Anaerobic Suspended Growth Processes</i>	999		<i>Performance of Different Types of Filter Technologies</i>	1078
10-4	Anaerobic Sludge Blanket Processes	1005		<i>Issues Related to Design and Operation of Treatment Facilities</i>	1080
	<i>Upflow Sludge Blanket Reactor Process</i>	1005		<i>Importance of Influent Wastewater Characteristics</i>	1081
	<i>Design Considerations for UASB Process</i>	1007		<i>Selection of Filtration Technology</i>	1081
	<i>Anaerobic Baffled Reactor</i>	1016		<i>Filter-Bed Characteristics</i>	1084
	<i>Anaerobic Migrating Blanket Reactor</i>	1017		<i>Filter Flowrate Control</i>	1089
10-5	Attached Growth Anaerobic Processes	1018		<i>Filter Backwashing Systems</i>	1091
	<i>Upflow Packed-Bed Attached Growth Reactor</i>	1019		<i>Filter Appurtenances</i>	1093
	<i>Upflow Attached Growth Anaerobic Expanded-Bed Reactor</i>	1020		<i>Filter Instrumentation and Control Systems</i>	1093
	<i>Attached Growth Anaerobic Fluidized-Bed Reactor</i>	1020		<i>Effluent Filtration with Chemical Addition</i>	1095
	<i>Downflow Attached Growth Processes</i>	1022		<i>Filter Problems</i>	1096
10-6	Other Anaerobic Treatment Processes	1024		<i>Need for Pilot-Plant Studies</i>	1096
	<i>Covered Anaerobic Lagoon Process</i>	1024	11-5	Surface Filtration	1098
	<i>Membrane Separation Anaerobic Treatment Process</i>	1026		<i>Discfilter®</i>	1098
