List of Figures and Tables

Figures

2.1	Senses of the term <i>value</i>	11
5.1	Principal components analysis of 58 values clusters: combined American, Japanese and Vietnamese data	40
5.2	Recomputed smallest space analysis 70 cultural groups (recomputed from Schwartz [2002])	42
5.3	Correspondence analysis of political issues: selected data from Ornstein et al. (1988)	46
6.1	Value cluster means for Americans, Japanese, and Vietnamese	52
7.1	Scatter plot for Americans and Japanese 328 value items	62
7.2	Comparison of Americans to Three Society average for 58 value clusters	65
7.3	Comparison of Americans to the “Typical American” for 58 value clusters	69
7.4	American Sample: gender, SES, and religion by <i>individualism/collectivism</i> and <i>altruism/self-interest</i>	74
7.5	Correspondence analysis of Rokeach values by religion	75
8.1	Comparison of Vietnamese to Three Society average on 58 cluster	81
8.2	Vietnamese sample: gender, religion, and generation by <i>individualism/collectivism</i> and <i>altruism/self-interest</i>	93
8.3	Vietnamese and American NEO facet means	96
9.1	Comparison with Japanese to Three Society average for 58 value clusters	103
10.1	Correspondence analysis of roles and selected value items: American data	128
10.2	Correspondence analysis of 18 evaluative scales and 6 concepts	134
10.3	Three loci of value	140

Tables

3.1	Kelinger format for Likert scales	15
3.2	Principal components analysis of 12 scales across 20 items	17
3.3	Principal components analysis (unrotated) of 24 rating scales across 10 items (54 UCSD students' correlations computed across concepts and respondents)	19
5.1	Principal components analysis of 58 value clusters	34
6.1	Comparison between Schwartz value data and American, Japanese, and Vietnamese value data	58
7.1	Religious denominations: American sample	62
7.2	Top 10 of 328 value items: Americans, Japanese, and Vietnamese	63
7.3	Top 20 average correlations with average for <i>market competition, capitalism, and economic growth</i>	66
7.4	American mean ratings for the <i>religion</i> cluster	70
7.5	Religiosity: Virginia sample	72
8.1	Top twenty correlations with <i>going along with group decisions</i>	82
8.2	Top twenty correlations with <i>finding meaning in life</i>	83
8.3	Top twenty correlations with <i>having a closeknit family</i>	85
8.4	Correlations between NEO and values— Vietnamese data	99
9.1	Top 20 correlations with <i>promoting the values of my culture</i>	104
9.2	Top 20 correlations with <i>thinking well of myself</i>	105
10.1	Intercorrelations between five methods of measuring the values of science plus the NORC sample	124
10.2	Top 8 value items (ratings 0 to 4) for 6 occupational roles	132
10.3	Top 8 value items (ratings 0 to 4) for self and intimate roles	132
