About the Authors

Damodar N. Gujarati

After teaching for more than 25 years at the City University of New York and 17 years in the Department of Social Sciences, U.S. Military Academy at West Point, New York, Dr. Gujarati is currently Professor Emeritus of economics at the Academy. Dr. Gujarati received his M.Com. degree from the University of Bombay in 1960, his M.B.A. degree from the University of Chicago in 1963, and his Ph.D. degree from the University of Chicago in 1965. Dr. Gujarati has published extensively in recognized national and international journals, such as the *Review of Economics and Statistics,* the *Economic Journal,* the *Journal of Financial and Quantitative Analysis,* and the *Journal of Business.* Dr. Gujarati was a member of the Board of Editors of the *Journal of Quantitative Economics,* the official journal of the Indian Econometric Society. Dr. Gujarati is also the author of *Pensions and the New York City Fiscal Crisis* (the American Enterprise Institute, 1978), *Government and Business* (McGraw-Hill, 1984), and *Essentials of Econometrics* (McGraw-Hill, 3d ed., 2006). Dr. Gujarati's books on econometrics have been translated into several languages.

Dr. Gujarati was a Visiting Professor at the University of Sheffield, U.K. (1970–1971), a Visiting Fulbright Professor to India (1981–1982), a Visiting Professor in the School of Management of the National University of Singapore (1985–1986), and a Visiting Professor of Econometrics, University of New South Wales, Australia (summer of 1988). Dr. Gujarati has lectured extensively on micro- and macroeconomic topics in countries such as Australia, China, Bangladesh, Germany, India, Israel, Mauritius, and the Republic of South Korea.

Dawn C. Porter

Dawn Porter has been an assistant professor in the Information and Operations Management Department at the Marshall School of Business of the University of Southern California since the fall of 2006. She currently teaches both introductory undergraduate and MBA statistics in the business school. Prior to joining the faculty at USC, from 2001–2006, Dawn was an assistant professor at the McDonough School of Business at Georgetown University, and before that was a visiting professor in the psychology department at the Graduate School of Arts and Sciences at NYU. At NYU she taught a number of advanced statistical methods courses and was also an instructor at the Stern School of Business. Her Ph.D. is from the Stern School in Statistics.

Dawn's areas of research interest include categorical analysis, agreement measures, multivariate modeling, and applications to the field of psychology. Her current research examines online auction models from a statistical perspective. She has presented her research at the Joint Statistical Meetings, the Decision Sciences Institute meetings, the International Conference on Information Systems, several universities including the London School of Economics and NYU, and various e-commerce and statistics seminar series. Dawn is also a co-author on *Essentials of Business Statistics,* 2nd edition, McGraw-Hill Irwin, 2008. Outside of academics, Dawn has been employed as a statistical consultant for KPMG, Inc. She has also worked as a statistical consultant for many other major companies, including Ginnie Mae, Inc., Toys R Us Corporation, IBM, Cosmaire, Inc., and New York University (NYU) Medical Center.

Brief Contents

Introduction 1

PART ONE
Single-Equation Regression Models 13

1 The Nature of Regression Analysis 15
2 Two-Variable Regression Analysis: Some Basic Ideas 34
3 Two-Variable Regression Model: The Problem of Estimation 55
4 Classical Normal Linear Regression Model (CNLRM) 97
5 Two-Variable Regression: Interval Estimation and Hypothesis Testing 107
6 Extensions of the Two-Variable Linear Regression Model 147
7 Multiple Regression Analysis: The Problem of Estimation 188
8 Multiple Regression Analysis: The Problem of Inference 233
9 Dummy Variable Regression Models 277

PART TWO
Relaxing the Assumptions of the Classical Model 315

10 Multicollinearity: What Happens If the Regressors Are Correlated? 320
11 Heteroscedasticity: What Happens If the Error Variance Is Nonconstant? 365
12 Autocorrelation: What Happens If the Error Terms Are Correlated? 412
13 Econometric Modeling: Model Specification and Diagnostic Testing 467

PART THREE
Topics in Econometrics 523

14 Nonlinear Regression Models 525
15 Qualitative Response Regression Models 541
16 Panel Data Regression Models 591
17 Dynamic Econometric Models: Autoregressive and Distributed-Lag Models 617

PART FOUR
Simultaneous-Equation Models and Time Series Econometrics 671

18 Simultaneous-Equation Models 673
19 The Identification Problem 689
20 Simultaneous-Equation Methods 711
21 Time Series Econometrics: Some Basic Concepts 737
22 Time Series Econometrics: Forecasting 773

APPENDICES

A A Review of Some Statistical Concepts 801
B Rudiments of Matrix Algebra 838
C The Matrix Approach to Linear Regression Model 849
D Statistical Tables 877
E Computer Output of EViews, MINITAB, Excel, and STATA 894
F Economic Data on the World Wide Web 900

SELECTED BIBLIOGRAPHY 902

Contents

Preface xvi
Acknowledgments xix

Introduction 1

I.1 What Is Econometrics? 1
I.2 Why a Separate Discipline? 2
I.3 Methodology of Econometrics 2
1. Statement of Theory or Hypothesis 3
2. Specification of the Mathematical Model of Consumption 3
3. Specification of the Econometric Model of Consumption 4
4. Obtaining Data 5
5. Estimation of the Econometric Model 5
6. Hypothesis Testing 7
7. Forecasting or Prediction 8
8. Use of the Model for Control or Policy Purposes 9
Choosing among Competing Models 9
I.4 Types of Econometrics 10
I.5 Mathematical and Statistical Prerequisites 11
I.6 The Role of the Computer 11
I.7 Suggestions for Further Reading 12

PART ONE
SINGLE-EQUATION REGRESSION MODELS 13

CHAPTER 1
The Nature of Regression Analysis 15

1.1 Historical Origin of the Term *Regression* 15
1.2 The Modern Interpretation of Regression 15
Examples 16
1.3 Statistical versus Deterministic Relationships 19
1.4 Regression versus Causation 19
1.5 Regression versus Correlation 20
1.6 Terminology and Notation 21
1.7 The Nature and Sources of Data for Economic Analysis 22
Types of Data 22
The Sources of Data 25
The Accuracy of Data 27
A Note on the Measurement Scales of Variables 27
Summary and Conclusions 28
Exercises 29

CHAPTER 2
Two-Variable Regression Analysis: Some Basic Ideas 34

2.1 A Hypothetical Example 34
2.2 The Concept of Population Regression Function (PRF) 37
2.3 The Meaning of the Term *Linear* 38
Linearity in the Variables 38
Linearity in the Parameters 38
2.4 Stochastic Specification of PRF 39
2.5 The Significance of the Stochastic Disturbance Term 41
2.6 The Sample Regression Function (SRF) 42
2.7 Illustrative Examples 45
Summary and Conclusions 48
Exercises 48

CHAPTER 3
Two-Variable Regression Model: The Problem of Estimation 55

3.1 The Method of Ordinary Least Squares 55
3.2 The Classical Linear Regression Model: The Assumptions Underlying the Method of Least Squares 61
A Word about These Assumptions 68
3.3 Precision or Standard Errors of Least-Squares Estimates 69
3.4 Properties of Least-Squares Estimators: The Gauss–Markov Theorem 71
3.5 The Coefficient of Determination r^2: A Measure of "Goodness of Fit" 73
3.6 A Numerical Example 78
3.7 Illustrative Examples 81
3.8 A Note on Monte Carlo Experiments 83
Summary and Conclusions 84
Exercises 85
Appendix 3A 92
3A.1 Derivation of Least-Squares Estimates 92
3A.2 Linearity and Unbiasedness Properties of Least-Squares Estimators 92
3A.3 Variances and Standard Errors of Least-Squares Estimators 93

3A.4 Covariance Between $\hat{\beta}_1$ and $\hat{\beta}_2$ 93
3A.5 The Least-Squares Estimator of σ^2 93
3A.6 Minimum-Variance Property of Least-Squares Estimators 95
3A.7 Consistency of Least-Squares Estimators 96

CHAPTER 4
Classical Normal Linear Regression Model (CNLRM) 97

4.1 The Probability Distribution of Disturbances u_i 97
4.2 The Normality Assumption for u_i 98
Why the Normality Assumption? 99
4.3 Properties of OLS Estimators under the Normality Assumption 100
4.4 The Method of Maximum Likelihood (ML) 102
Summary and Conclusions 102
Appendix 4A 103
4A.1 Maximum Likelihood Estimation of Two-Variable Regression Model 103
4A.2 Maximum Likelihood Estimation of Food Expenditure in India 105
Appendix 4A Exercises 105

CHAPTER 5
Two-Variable Regression: Interval Estimation and Hypothesis Testing 107

5.1 Statistical Prerequisites 107
5.2 Interval Estimation: Some Basic Ideas 108
5.3 Confidence Intervals for Regression Coefficients β_1 and β_2 109
Confidence Interval for β_2 109
Confidence Interval for β_1 and β_2 Simultaneously 111
5.4 Confidence Interval for σ^2 111
5.5 Hypothesis Testing: General Comments 113
5.6 Hypothesis Testing: The Confidence-Interval Approach 113
Two-Sided or Two-Tail Test 113
One-Sided or One-Tail Test 115
5.7 Hypothesis Testing: The Test-of-Significance Approach 115
Testing the Significance of Regression Coefficients: The t Test 115
Testing the Significance of σ^2: The χ^2 Test 118
5.8 Hypothesis Testing: Some Practical Aspects 119
The Meaning of "Accepting" or "Rejecting" a Hypothesis 119
The "Zero" Null Hypothesis and the "2-t" Rule of Thumb 120
Forming the Null and Alternative Hypotheses 121
Choosing α, the Level of Significance 121
The Exact Level of Significance: The p Value 122
Statistical Significance versus Practical Significance 123
The Choice between Confidence-Interval and Test-of-Significance Approaches to Hypothesis Testing 124
5.9 Regression Analysis and Analysis of Variance 124
5.10 Application of Regression Analysis: The Problem of Prediction 126
Mean Prediction 127
Individual Prediction 128
5.11 Reporting the Results of Regression Analysis 129
5.12 Evaluating the Results of Regression Analysis 130
Normality Tests 130
Other Tests of Model Adequacy 132
Summary and Conclusions 134
Exercises 135
Appendix 5A 143
5A.1 Probability Distributions Related to the Normal Distribution 143
5A.2 Derivation of Equation (5.3.2) 145
5A.3 Derivation of Equation (5.9.1) 145
5A.4 Derivations of Equations (5.10.2) and (5.10.6) 145
Variance of Mean Prediction 145
Variance of Individual Prediction 146

CHAPTER 6
Extensions of the Two-Variable Linear Regression Model 147

6.1 Regression through the Origin 147
r^2 for Regression-through-Origin Model 150
6.2 Scaling and Units of Measurement 154
A Word about Interpretation 157
6.3 Regression on Standardized Variables 157
6.4 Functional Forms of Regression Models 159
6.5 How to Measure Elasticity: The Log-Linear Model 159
6.6 Semilog Models: Log–Lin and Lin–Log Models 162

How to Measure the Growth Rate: The Log–Lin Model 162
The Lin–Log Model 164
6.7 Reciprocal Models 166
Log Hyperbola or Logarithmic Reciprocal Model 172
6.8 Choice of Functional Form 172
6.9 A Note on the Nature of the Stochastic Error Term: Additive versus Multiplicative Stochastic Error Term 174
Summary and Conclusions 175
Exercises 176
Appendix 6A 182
6A.1 Derivation of Least-Squares Estimators for Regression through the Origin 182
6A.2 Proof that a Standardized Variable Has Zero Mean and Unit Variance 183
6A.3 Logarithms 184
6A.4 Growth Rate Formulas 186
6A.5 Box-Cox Regression Model 187

CHAPTER 7
Multiple Regression Analysis: The Problem of Estimation 188

7.1 The Three-Variable Model: Notation and Assumptions 188
7.2 Interpretation of Multiple Regression Equation 191
7.3 The Meaning of Partial Regression Coefficients 191
7.4 OLS and ML Estimation of the Partial Regression Coefficients 192
OLS Estimators 192
Variances and Standard Errors of OLS Estimators 194
Properties of OLS Estimators 195
Maximum Likelihood Estimators 196
7.5 The Multiple Coefficient of Determination R^2 and the Multiple Coefficient of Correlation R 196
7.6 An Illustrative Example 198
Regression on Standardized Variables 199
Impact on the Dependent Variable of a Unit Change in More than One Regressor 199
7.7 Simple Regression in the Context of Multiple Regression: Introduction to Specification Bias 200
7.8 R^2 and the Adjusted R^2 201
Comparing Two R^2 Values 203
Allocating R^2 among Regressors 206
The "Game" of Maximizing $\bar{R}^2$ 206
7.9 The Cobb–Douglas Production Function: More on Functional Form 207
7.10 Polynomial Regression Models 210
7.11 Partial Correlation Coefficients 213
Explanation of Simple and Partial Correlation Coefficients 213
Interpretation of Simple and Partial Correlation Coefficients 214
Summary and Conclusions 215
Exercises 216
Appendix 7A 227
7A.1 Derivation of OLS Estimators Given in Equations (7.4.3) to (7.4.5) 227
7A.2 Equality between the Coefficients of PGNP in Equations (7.3.5) and (7.6.2) 229
7A.3 Derivation of Equation (7.4.19) 229
7A.4 Maximum Likelihood Estimation of the Multiple Regression Model 230
7A.5 EViews Output of the Cobb–Douglas Production Function in Equation (7.9.4) 231

CHAPTER 8
Multiple Regression Analysis: The Problem of Inference 233

8.1 The Normality Assumption Once Again 233
8.2 Hypothesis Testing in Multiple Regression: General Comments 234
8.3 Hypothesis Testing about Individual Regression Coefficients 235
8.4 Testing the Overall Significance of the Sample Regression 237
The Analysis of Variance Approach to Testing the Overall Significance of an Observed Multiple Regression: The F Test 238
Testing the Overall Significance of a Multiple Regression: The F Test 240
An Important Relationship between R^2 and F 241
Testing the Overall Significance of a Multiple Regression in Terms of R^2 242
The "Incremental" or "Marginal" Contribution of an Explanatory Variable 243
8.5 Testing the Equality of Two Regression Coefficients 246
8.6 Restricted Least Squares: Testing Linear Equality Restrictions 248
The t-Test Approach 249

The F-Test Approach: Restricted Least Squares 249
General F Testing 252
8.7 Testing for Structural or Parameter Stability of Regression Models: The Chow Test 254
8.8 Prediction with Multiple Regression 259
8.9 The Troika of Hypothesis Tests: The Likelihood Ratio (LR), Wald (W), and Lagrange Multiplier (LM) Tests 259
8.10 Testing the Functional Form of Regression: Choosing between Linear and Log–Linear Regression Models 260
Summary and Conclusions 262
Exercises 262
Appendix 8A: Likelihood Ratio (LR) Test 274

CHAPTER 9
Dummy Variable Regression Models 277

9.1 The Nature of Dummy Variables 277
9.2 ANOVA Models 278
Caution in the Use of Dummy Variables 281
9.3 ANOVA Models with Two Qualitative Variables 283
9.4 Regression with a Mixture of Quantitative and Qualitative Regressors: The ANCOVA Models 283
9.5 The Dummy Variable Alternative to the Chow Test 285
9.6 Interaction Effects Using Dummy Variables 288
9.7 The Use of Dummy Variables in Seasonal Analysis 290
9.8 Piecewise Linear Regression 295
9.9 Panel Data Regression Models 297
9.10 Some Technical Aspects of the Dummy Variable Technique 297
The Interpretation of Dummy Variables in Semilogarithmic Regressions 297
Dummy Variables and Heteroscedasticity 298
Dummy Variables and Autocorrelation 299
What Happens If the Dependent Variable Is a Dummy Variable? 299
9.11 Topics for Further Study 300
9.12 A Concluding Example 300
Summary and Conclusions 304
Exercises 305
Appendix 9A: Semilogarithmic Regression with Dummy Regressor 314

PART TWO
RELAXING THE ASSUMPTIONS OF THE CLASSICAL MODEL 315

CHAPTER 10
Multicollinearity: What Happens If the Regressors Are Correlated? 320

10.1 The Nature of Multicollinearity 321
10.2 Estimation in the Presence of Perfect Multicollinearity 324
10.3 Estimation in the Presence of "High" but "Imperfect" Multicollinearity 325
10.4 Multicollinearity: Much Ado about Nothing? Theoretical Consequences of Multicollinearity 326
10.5 Practical Consequences of Multicollinearity 327
Large Variances and Covariances of OLS Estimators 328
Wider Confidence Intervals 330
"Insignificant" t Ratios 330
A High R^2 but Few Significant t Ratios 331
Sensitivity of OLS Estimators and Their Standard Errors to Small Changes in Data 331
Consequences of Micronumerosity 332
10.6 An Illustrative Example 332
10.7 Detection of Multicollinearity 337
10.8 Remedial Measures 342
Do Nothing 342
Rule-of-Thumb Procedures 342
10.9 Is Multicollinearity Necessarily Bad? Maybe Not, If the Objective Is Prediction Only 347
10.10 An Extended Example: The Longley Data 347
Summary and Conclusions 350
Exercises 351

CHAPTER 11
Heteroscedasticity: What Happens If the Error Variance Is Nonconstant? 365

11.1 The Nature of Heteroscedasticity 365
11.2 OLS Estimation in the Presence of Heteroscedasticity 370
11.3 The Method of Generalized Least Squares (GLS) 371
Difference between OLS and GLS 373
11.4 Consequences of Using OLS in the Presence of Heteroscedasticity 374

OLS Estimation Allowing for Heteroscedasticity 374
OLS Estimation Disregarding Heteroscedasticity 374
A Technical Note 376
11.5 Detection of Heteroscedasticity 376
Informal Methods 376
Formal Methods 378
11.6 Remedial Measures 389
When σ_i^2 Is Known: The Method of Weighted Least Squares 389
When σ_i^2 Is Not Known 391
11.7 Concluding Examples 395
11.8 A Caution about Overreacting to Heteroscedasticity 400
Summary and Conclusions 400
Exercises 401
Appendix 11A 409
11A.1 Proof of Equation (11.2.2) 409
11A.2 The Method of Weighted Least Squares 409
11A.3 Proof that $E(\hat{\sigma}^2) \neq \sigma^2$ in the Presence of Heteroscedasticity 410
11A.4 White's Robust Standard Errors 411

CHAPTER 12
Autocorrelation: What Happens If the Error Terms Are Correlated? 412

12.1 The Nature of the Problem 413
12.2 OLS Estimation in the Presence of Autocorrelation 418
12.3 The BLUE Estimator in the Presence of Autocorrelation 422
12.4 Consequences of Using OLS in the Presence of Autocorrelation 423
OLS Estimation Allowing for Autocorrelation 423
OLS Estimation Disregarding Autocorrelation 423
12.5 Relationship between Wages and Productivity in the Business Sector of the United States, 1960–2005 428
12.6 Detecting Autocorrelation 429
I. Graphical Method 429
II. The Runs Test 431
III. Durbin–Watson d Test 434
IV. A General Test of Autocorrelation: The Breusch–Godfrey (BG) Test 438
Why So Many Tests of Autocorrelation? 440
12.7 What to Do When You Find Autocorrelation: Remedial Measures 440
12.8 Model Mis-Specification versus Pure Autocorrelation 441
12.9 Correcting for (Pure) Autocorrelation: The Method of Generalized Least Squares (GLS) 442
When ρ Is Known 442
When ρ Is Not Known 443
12.10 The Newey–West Method of Correcting the OLS Standard Errors 447
12.11 OLS versus FGLS and HAC 448
12.12 Additional Aspects of Autocorrelation 449
Dummy Variables and Autocorrelation 449
ARCH and GARCH Models 449
Coexistence of Autocorrelation and Heteroscedasticity 450
12.13 A Concluding Example 450
Summary and Conclusions 452
Exercises 453
Appendix 12A 466
12A.1 Proof that the Error Term v_t in Equation (12.1.11) Is Autocorrelated 466
12A.2 Proof of Equations (12.2.3), (12.2.4), and (12.2.5) 466

CHAPTER 13
Econometric Modeling: Model Specification and Diagnostic Testing 467

13.1 Model Selection Criteria 468
13.2 Types of Specification Errors 468
13.3 Consequences of Model Specification Errors 470
Underfitting a Model (Omitting a Relevant Variable) 471
Inclusion of an Irrelevant Variable (Overfitting a Model) 473
13.4 Tests of Specification Errors 474
Detecting the Presence of Unnecessary Variables (Overfitting a Model) 475
Tests for Omitted Variables and Incorrect Functional Form 477
13.5 Errors of Measurement 482
Errors of Measurement in the Dependent Variable Y 482
Errors of Measurement in the Explanatory Variable X 483
13.6 Incorrect Specification of the Stochastic Error Term 486

13.7 Nested versus Non-Nested Models 487
13.8 Tests of Non-Nested Hypotheses 488
The Discrimination Approach 488
The Discerning Approach 488
13.9 Model Selection Criteria 493
The R^2 Criterion 493
Adjusted R^2 493
Akaike's Information Criterion (AIC) 494
Schwarz's Information Criterion (SIC) 494
Mallows's C_p Criterion 494
A Word of Caution about Model Selection Criteria 495
Forecast Chi-Square (χ^2) 496
13.10 Additional Topics in Econometric Modeling 496
Outliers, Leverage, and Influence 496
Recursive Least Squares 498
Chow's Prediction Failure Test 498
Missing Data 499
13.11 Concluding Examples 500
1. A Model of Hourly Wage Determination 500
2. Real Consumption Function for the United States, 1947–2000 505
13.12 Non-Normal Errors and Stochastic Regressors 509
1. What Happens If the Error Term Is Not Normally Distributed? 509
2. Stochastic Explanatory Variables 510
13.13 A Word to the Practitioner 511
Summary and Conclusions 512
Exercises 513
Appendix 13A 519
13A.1 The Proof that $E(b_{12}) = \beta_2 + \beta_3 b_{32}$ [Equation (13.3.3)] 519
13A.2 The Consequences of Including an Irrelevant Variable: The Unbiasedness Property 520
13A.3 The Proof of Equation (13.5.10) 521
13A.4 The Proof of Equation (13.6.2) 522

PART THREE
TOPICS IN ECONOMETRICS 523

CHAPTER 14
Nonlinear Regression Models 525

14.1 Intrinsically Linear and Intrinsically Nonlinear Regression Models 525
14.2 Estimation of Linear and Nonlinear Regression Models 527
14.3 Estimating Nonlinear Regression Models: The Trial-and-Error Method 527
14.4 Approaches to Estimating Nonlinear Regression Models 529
Direct Search or Trial-and-Error or Derivative-Free Method 529
Direct Optimization 529
Iterative Linearization Method 530
14.5 Illustrative Examples 530
Summary and Conclusions 535
Exercises 535
Appendix 14A 537
14A.1 Derivation of Equations (14.2.4) and (14.2.5) 537
14A.2 The Linearization Method 537
14A.3 Linear Approximation of the Exponential Function Given in Equation (14.2.2) 538

CHAPTER 15
Qualitative Response Regression Models 541

15.1 The Nature of Qualitative Response Models 541
15.2 The Linear Probability Model (LPM) 543
Non-Normality of the Disturbances u_i 544
Heteroscedastic Variances of the Disturbances 544
Nonfulfillment of $0 \le E(Y_i \mid X_i) \le 1$ 545
Questionable Value of R^2 as a Measure of Goodness of Fit 546
15.3 Applications of LPM 549
15.4 Alternatives to LPM 552
15.5 The Logit Model 553
15.6 Estimation of the Logit Model 555
Data at the Individual Level 556
Grouped or Replicated Data 556
15.7 The Grouped Logit (Glogit) Model: A Numerical Example 558
Interpretation of the Estimated Logit Model 558
15.8 The Logit Model for Ungrouped or Individual Data 561
15.9 The Probit Model 566
Probit Estimation with Grouped Data: gprobit 567
The Probit Model for Ungrouped or Individual Data 570
The Marginal Effect of a Unit Change in the Value of a Regressor in the Various Regression Models 571

15.10 Logit and Probit Models 571
15.11 The Tobit Model 574
Illustration of the Tobit Model: Ray Fair's Model of Extramarital Affairs 575
15.12 Modeling Count Data: The Poisson Regression Model 576
15.13 Further Topics in Qualitative Response Regression Models 579
Ordinal Logit and Probit Models 580
Multinomial Logit and Probit Models 580
Duration Models 580
Summary and Conclusions 581
Exercises 582
Appendix 15A 589
15A.1 Maximum Likelihood Estimation of the Logit and Probit Models for Individual (Ungrouped) Data 589

CHAPTER 16
Panel Data Regression Models 591

16.1 Why Panel Data? 592
16.2 Panel Data: An Illustrative Example 593
16.3 Pooled OLS Regression or Constant Coefficients Model 594
16.4 The Fixed Effect Least-Squares Dummy Variable (LSDV) Model 596
A Caution in the Use of the Fixed Effect LSDV Model 598
16.5 The Fixed-Effect Within-Group (WG) Estimator 599
16.6 The Random Effects Model (REM) 602
Breusch and Pagan Lagrange Multiplier Test 605
16.7 Properties of Various Estimators 605
16.8 Fixed Effects versus Random Effects Model: Some Guidelines 606
16.9 Panel Data Regressions: Some Concluding Comments 607
16.10 Some Illustrative Examples 607
Summary and Conclusions 612
Exercises 613

CHAPTER 17
Dynamic Econometric Models: Autoregressive and Distributed-Lag Models 617

17.1 The Role of "Time," or "Lag," in Economics 618
17.2 The Reasons for Lags 622
17.3 Estimation of Distributed-Lag Models 623
Ad Hoc Estimation of Distributed-Lag Models 623
17.4 The Koyck Approach to Distributed-Lag Models 624
The Median Lag 627
The Mean Lag 627
17.5 Rationalization of the Koyck Model: The Adaptive Expectations Model 629
17.6 Another Rationalization of the Koyck Model: The Stock Adjustment, or Partial Adjustment, Model 632
17.7 Combination of Adaptive Expectations and Partial Adjustment Models 634
17.8 Estimation of Autoregressive Models 634
17.9 The Method of Instrumental Variables (IV) 636
17.10 Detecting Autocorrelation in Autoregressive Models: Durbin *h* Test 637
17.11 A Numerical Example: The Demand for Money in Canada, 1979–I to 1988–IV 639
17.12 Illustrative Examples 642
17.13 The Almon Approach to Distributed-Lag Models: The Almon or Polynomial Distributed Lag (PDL) 645
17.14 Causality in Economics: The Granger Causality Test 652
The Granger Test 653
A Note on Causality and Exogeneity 657
Summary and Conclusions 658
Exercises 659
Appendix 17A 669
17A.1 The Sargan Test for the Validity of Instruments 669

PART FOUR
SIMULTANEOUS-EQUATION MODELS AND TIME SERIES ECONOMETRICS 671

CHAPTER 18
Simultaneous-Equation Models 673

18.1 The Nature of Simultaneous-Equation Models 673
18.2 Examples of Simultaneous-Equation Models 674
18.3 The Simultaneous-Equation Bias: Inconsistency of OLS Estimators 679

18.4 The Simultaneous-Equation Bias: A Numerical Example 682
Summary and Conclusions 684
Exercises 684

CHAPTER 19
The Identification Problem 689

19.1 Notations and Definitions 689
19.2 The Identification Problem 692
Underidentification 692
Just, or Exact, Identification 694
Overidentification 697
19.3 Rules for Identification 699
The Order Condition of Identifiability 699
The Rank Condition of Identifiability 700
19.4 A Test of Simultaneity 703
Hausman Specification Test 703
19.5 Tests for Exogeneity 705
Summary and Conclusions 706
Exercises 706

CHAPTER 20
Simultaneous-Equation Methods 711

20.1 Approaches to Estimation 711
20.2 Recursive Models and Ordinary Least Squares 712
20.3 Estimation of a Just Identified Equation: The Method of Indirect Least Squares (ILS) 715
An Illustrative Example 715
Properties of ILS Estimators 718
20.4 Estimation of an Overidentified Equation: The Method of Two-Stage Least Squares (2SLS) 718
20.5 2SLS: A Numerical Example 721
20.6 Illustrative Examples 724
Summary and Conclusions 730
Exercises 730
Appendix 20A 735
20A.1 Bias in the Indirect Least-Squares Estimators 735
20A.2 Estimation of Standard Errors of 2SLS Estimators 736

CHAPTER 21
Time Series Econometrics: Some Basic Concepts 737

21.1 A Look at Selected U.S. Economic Time Series 738
21.2 Key Concepts 739
21.3 Stochastic Processes 740
Stationary Stochastic Processes 740
Nonstationary Stochastic Processes 741
21.4 Unit Root Stochastic Process 744
21.5 Trend Stationary (TS) and Difference Stationary (DS) Stochastic Processes 745
21.6 Integrated Stochastic Processes 746
Properties of Integrated Series 747
21.7 The Phenomenon of Spurious Regression 747
21.8 Tests of Stationarity 748
1. Graphical Analysis 749
2. Autocorrelation Function (ACF) and Correlogram 749
Statistical Significance of Autocorrelation Coefficients 753
21.9 The Unit Root Test 754
The Augmented Dickey–Fuller (ADF) Test 757
Testing the Significance of More than One Coefficient: The F Test 758
The Phillips–Perron (PP) Unit Root Tests 758
Testing for Structural Changes 758
A Critique of the Unit Root Tests 759
21.10 Transforming Nonstationary Time Series 760
Difference-Stationary Processes 760
Trend-Stationary Processes 761
21.11 Cointegration: Regression of a Unit Root Time Series on Another Unit Root Time Series 762
Testing for Cointegration 763
Cointegration and Error Correction Mechanism (ECM) 764
21.12 Some Economic Applications 765
Summary and Conclusions 768
Exercises 769

CHAPTER 22
Time Series Econometrics: Forecasting 773

22.1 Approaches to Economic Forecasting 773
Exponential Smoothing Methods 774
Single-Equation Regression Models 774
Simultaneous-Equation Regression Models 774
ARIMA Models 774
VAR Models 775

22.2 AR, MA, and ARIMA Modeling of Time Series Data 775
An Autoregressive (AR) Process 775
A Moving Average (MA) Process 776
An Autoregressive and Moving Average (ARMA) Process 776
An Autoregressive Integrated Moving Average (ARIMA) Process 776
22.3 The Box–Jenkins (BJ) Methodology 777
22.4 Identification 778
22.5 Estimation of the ARIMA Model 782
22.6 Diagnostic Checking 782
22.7 Forecasting 782
22.8 Further Aspects of the BJ Methodology 784
22.9 Vector Autoregression (VAR) 784
Estimation or VAR 785
Forecasting with VAR 786
VAR and Causality 787
Some Problems with VAR Modeling 788
An Application of VAR: A VAR Model of the Texas Economy 789
22.10 Measuring Volatility in Financial Time Series: The ARCH and GARCH Models 791
What to Do If ARCH Is Present 795
A Word on the Durbin–Watson d and the ARCH Effect 796
A Note on the GARCH Model 796
22.11 Concluding Examples 796
Summary and Conclusions 798
Exercises 799

APPENDIX A
A Review of Some Statistical Concepts 801

A.1 Summation and Product Operators 801
A.2 Sample Space, Sample Points, and Events 802
A.3 Probability and Random Variables 802
Probability 802
Random Variables 803
A.4 Probability Density Function (PDF) 803
Probability Density Function of a Discrete Random Variable 803
Probability Density Function of a Continuous Random Variable 804
Joint Probability Density Functions 805
Marginal Probability Density Function 805
Statistical Independence 806
A.5 Characteristics of Probability Distributions 808
Expected Value 808
Properties of Expected Values 809
Variance 810
Properties of Variance 811
Covariance 811
Properties of Covariance 812
Correlation Coefficient 812
Conditional Expectation and Conditional Variance 813
Properties of Conditional Expectation and Conditional Variance 814
Higher Moments of Probability Distributions 815
A.6 Some Important Theoretical Probability Distributions 816
Normal Distribution 816
The χ^2 (Chi-Square) Distribution 819
Student's t Distribution 820
The F Distribution 821
The Bernoulli Binomial Distribution 822
Binomial Distribution 822
The Poisson Distribution 823
A.7 Statistical Inference: Estimation 823
Point Estimation 823
Interval Estimation 824
Methods of Estimation 825
Small-Sample Properties 826
Large-Sample Properties 828
A.8 Statistical Inference: Hypothesis Testing 831
The Confidence Interval Approach 832
The Test of Significance Approach 836
References 837

APPENDIX B
Rudiments of Matrix Algebra 838

B.1 Definitions 838
Matrix 838
Column Vector 838
Row Vector 839
Transposition 839
Submatrix 839
B.2 Types of Matrices 839
Square Matrix 839
Diagonal Matrix 839
Scalar Matrix 840
Identity, or Unit, Matrix 840
Symmetric Matrix 840
Null Matrix 840
Null Vector 840
Equal Matrices 840

B.3 Matrix Operations 840
Matrix Addition 840
Matrix Subtraction 841
Scalar Multiplication 841
Matrix Multiplication 841
Properties of Matrix Multiplication 842
Matrix Transposition 843
Matrix Inversion 843
B.4 Determinants 843
Evaluation of a Determinant 844
Properties of Determinants 844
Rank of a Matrix 845
Minor 846
Cofactor 846
B.5 Finding the Inverse of a Square Matrix 847
B.6 Matrix Differentiation 848
References 848

APPENDIX C
The Matrix Approach to Linear Regression Model 849

C.1 The *k*-Variable Linear Regression Model 849
C.2 Assumptions of the Classical Linear Regression Model in Matrix Notation 851
C.3 OLS Estimation 853
An Illustration 855
Variance-Covariance Matrix of $\hat{\beta}$ 856
Properties of OLS Vector $\hat{\beta}$ 858
C.4 The Coefficient of Determination R^2 in Matrix Notation 858
C.5 The Correlation Matrix 859
C.6 Hypothesis Testing about Individual Regression Coefficients in Matrix Notation 859
C.7 Testing the Overall Significance of Regression: Analysis of Variance in Matrix Notation 860
C.8 Testing Linear Restrictions: General *F* Testing Using Matrix Notation 861
C.9 Prediction Using Multiple Regression: Matrix Formulation 861
Mean Prediction 861
Variance of Mean Prediction 862
Individual Prediction 862
Variance of Individual Prediction 862
C.10 Summary of the Matrix Approach: An Illustrative Example 863
C.11 Generalized Least Squares (GLS) 867
C.12 Summary and Conclusions 868
Exercises 869
Appendix CA 874
CA.1 Derivation of *k* Normal or Simultaneous Equations 874
CA.2 Matrix Derivation of Normal Equations 875
CA.3 Variance–Covariance Matrix of $\hat{\beta}$ 875
CA.4 BLUE Property of OLS Estimators 875

APPENDIX D
Statistical Tables 877

APPENDIX E
Computer Output of EViews, MINITAB, Excel, and STATA 894

E.1 EViews 894
E.2 MINITAB 896
E.3 Excel 897
E.4 STATA 898
E.5 Concluding Comments 898
References 899

APPENDIX F
Economic Data on the World Wide Web 900

Selected Bibliography 902

Name Index 905

Subject Index 909
