

Introducing Geographic Information Systems with ArcGIS® Third Edition

A Workbook Approach
to Learning GIS

Michael Kennedy

University of Kentucky

WILEY

Contents

	Foreword	xxvii
	Preface to Third Edition	xxix
	Preface to First Edition	xxxv
	Introduction	xliii
PART I	Basic Concepts of GIS	1
CHAPTER 1	Some Concepts That Underpin GIS	3
	You Ask: “What Is GIS About?”	3
	And So You Ask <i>Again</i> : “What Is GIS About?”	4
	EXERCISE 1-1 (PROJECT)	
	Finding a Geographic Site by Manual Means	5
	More of What GIS Is About	10
	Next Steps: Seemingly Independent Things You Need To Know	11
	Determining Where Something Is: Coordinate Systems	12
	Determining Where Something Is: Latitude and Longitude	14
	Geodesy, Coordinate Systems, Geographic Projections, and Scale	15
	Projected Coordinate Systems	15
	Geographic vs. Projected Coordinates: A Comparison	17
	Two Projected Coordinate Systems: UTM and State Plane	17
	Physical Dimensionality	20
	Global Positioning Systems	22
	Remote Sensing	22

Contents

Relational Databases	23
Searching (and Indexing) in General	29
Another Definition of GIS	30
Computer Software: In General	32
STEP-BY-STEP	35
EXERCISE 1-2 (PROJECT)	
Developing a Fast Facts File for the Information You Learn	35
Understanding the File Structure for the Exercises	36
EXERCISE 1-3 (MINOR PROJECT)	
Getting Set Up with ArcGIS	37
EXERCISE 1-4 (PROJECT)	
Looking at the ArcCatalog Program	38
Anatomy of the ArcCatalog Window	39
Setting Some Options	40
The Catalog Tree	42
Connecting to a Folder	44
The Toolbars and the Status Bar	45
An Optional Step	49
Exploring Basic GIS Data Storage Models	50
EXERCISE 1-5 (MAJOR PROJECT)	
Exploring Data with ArcCatalog—Fire Hydrants in a Village	51
Copying Data over to Your Personal Folder	51
Examining the Table	54
Deriving Information from the Table	55
Sorting the Records	55
Finding Values in a Table	56
Identifying Geographic Features and Coordinates	57
Looking at GeoGraphics	58
A First Look at Metadata	59
Using ArcCatalog to Place Data in ArcMap	61

EXERCISE 1-6 (PROJECT)

A Look at Some Spatial Data for Finding a Site for the Wildcat Boat Facility	63
Using the Area on the Disk for Your Own Work	64
Copying Data over to Your Personal IGIS Folder	64
Searching for GIS Data	65
Exploring Soils	70
But Something Is Missing	71
Is the Newly Found Data Applicable?	73
Making a Personal Geodatabase Feature Class from a Coverage	74
Looking at the Landcover Personal Geodatabase Feature Class	75
Further Examining the Wildcat Boat Facility Area Data Sets	76

EXERCISE 1-7 (PROJECT)

Looking at Wildcat Boat Data with ArcMap	79
Seeing the Results of the Join	82

EXERCISE 1-8 (PROJECT)

Understanding the ArcGIS Help System	82
A Button for Instant Help: What's This? (for ArcGIS Desktop version 10.0 only)	82
Getting Instant Help for a Tool or Command (for ArcGIS Desktop version 10.1)	83
The Help System and Documentation	83
ArcGIS Help across the Internet	84

EXERCISE 1-9 (DULL STUFF)

Using ArcCatalog for Mundane Operations	85
---	----

EXERCISE 1-10 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File	86
What's Next?	88

CHAPTER 2	Characteristics and Examples of Spatial Data	89
	The Original Form of Spatial Data: Maps	89

Contents

Moving Spatial Data from Maps to Computers: Forces for Change	90
Spatial Data	94
Limiting the Scope	95
Spatial Data for Decision Making	95
Sets of Spatial Data: The Database	95
Spatial Databases: Inherent Difficulties	96
Information Systems	101
Uses for a Geographic Information System	103
STEP-BY-STEP	113
EXERCISE 2-1 (MOSTLY OUTSIDE)	
Appreciating Geographic Space and Spatial Data	113
EXERCISE 2-2 (SETUP)	
ArcMap Toolbar Examination and Review	114
EXERCISE 2-3 (MAJOR PROJECT)	
Exploring Different Types of Geographic Data	117
The Basic Difference between ArcCatalog and ArcMap	117
Exploring Data from the NAVSTAR Global Positioning System (GPS)	117
Preliminaries	118
Seeing the GPS File in ArcMap	118
Looking at the GPS Track in the Context of a Variety of GIS Data	122
A Potpourri of Types of Geographic Data	122
Displaying Layers from Vector-Based Datasets	125
Housekeeping: Saving and Restoring a Map	127
Selecting: Both Map Data and Attribute Data	128
Using the Measure Tool and the Identify Tool	131
County Boundaries and Polygons	131
TIGER/Line Files	133
The Table of Contents: Display vs. Source vs. Selection	134
EXERCISE 2-4 (MAJOR PROJECT)	
A Look at Raster Data	136

Digital Raster Graphics and Cell-Based Files	136
A Look (Optional) at How DRG Color Values Are Put Together	140
Experimenting with Different Ways of Seeing Data	141
Digital Orthophotos	143
More TIGER/Line Files	145
Another Tie between Attributes and Geographics	148
More Housekeeping: Shutting Down and Restarting ArcMap	149
Digital Elevation Model Files	149
Comparing the DEM and the DRG	153
Contour Line Files	153
EXERCISE 2-5 (PROJECT)	
<hr/>	
Triangulated Irregular Networks	155
TINs are Three-Dimensional Datasets	158
Elevation Based on Massive Sets of Data: The Esri Terrain	160
EXERCISE 2-6 (PROJECT)	
<hr/>	
Geodatasets of Soils, Rocks, and Land Cover	161
The Summarizing Procedure	162
Some Geological Data	164
Rasters of Land Cover Data	165
You Are Not Alone (Assuming you have an Internet connection)	167
Next Steps on Your Own	168
EXERCISE 2-7 (REVIEW)	
<hr/>	
Checking, Updating, and Organizing Your Fast Facts File	168
The Next Chapter	171
CHAPTER 3 Products of a GIS: Maps and Other Information	173
GIS and Cartography—Compatibility?	173
Products of a Geographic Information System	174
Overall Requirements for Utility	174
Classification of GIS Products	175
Documenting Products	177

Contents

Thoughts on Different Types of Products	178
Don't Ignore Character-Based Information	178
Don't Hesitate to Sort Information	178
Consider Hard Copy	179
Consider Balance in Product Content	179
Elements of Product Design	179
Units, Projection, and Scale	180
Thoughts on Resolution and Scale	180
Making Sure There Is a Base Map	180
Measure of Quality Assurance	181
The Decision Maker–Product Interface	181
In Summary	182
STEP-BY-STEP	183
The Data View and the Layout View	183
EXERCISE 3-1 (WARM-UP)	
Templates	184
EXERCISE 3-2 (PROJECT)	
Templates That Contain Data	186
Controlling Your View of the Map: Zooming	188
Understanding the Panning and Other Controls	189
Adding Other Map Elements	190
EXERCISE 3-3 (MAJOR PROJECT)	
Data Frames	192
Adding Data to Data Frames	193
A Summary of the Graphic Indicators	195
Tinkering with the Map—Scale Bars	195
Legends	196
EXERCISE 3-4 (MINI PROJECT)	
Looking at the Plethora of Mapmaking Tools and Options	198

EXERCISE 3-5 (MAJOR PROJECT)	
Making a Map of the Wildcat Boat Datasets	201
EXERCISE 3-6 (MAJOR PROJECT)	
Publishing Maps on the Internet	201
EXERCISE 3-7 (MAJOR PROJECT)	
Enhancing Communication: Styles, Layer Files, Layer Packages, Reports, Charts, and Graphics	206
Layer Files	206
Layer Packages	209
Styles	210
Adding and Using a Style	211
Reports	212
Charts and Graphs	216
Graphics	218
Making Graphics out of Geographic Features	223
EXERCISE 3-8	
Checking, Updating, and Organizing Your Fast Facts File	224
CHAPTER 4 Structures for Storing Geographic Data	227
Why Is Spatial Data Analysis So Hard?	227
How the Computer Aids Analyzing Spatial Data	228
Complexity of Spatial Data	228
Structures for Spatial Data	229
Storage Paradigms for Areal Data	230
Fundamental Bases of Geographic Data Models	230
The Raster Data Model	232
Vector Data Model	234
A Multiplicity of “Storadigms”	235
Vector-Based Geographic Datasets—Logical Construction	235
Zero-Dimensional Entities in a Two-Dimensional Field: Points	236
One-Dimensional Entities in a Two-Dimensional Field: Lines	237

Contents

Two-Dimensional Entities in a Two-Dimensional Field: Polygons	238
Three-Dimensional Entities in a Three-Dimensional Field: Triangles and Multipatches	239
Specific Esri Spatial Vector Data Storage Mechanisms	240
The Geodatabase Data Structure	240
Geodatabase Software	240
Polygons within Polygons—Perimeter and Area Calculations	241
Geodatabases—Layout in the Computer	243
Geodatabases—Logical Construction	243
Geodatabases—Feature Shape	244
Nested Polygons in Geodatabases	245
Geodatabases and Attributes	245
Objects—First Acquaintance	247
The Shapefile Data Structure	247
Shapefiles—Layout in the Computer	248
Summarizing Vector Dataset Features	249
Summary of Logical Structures of Vector-Based GIS Datasets	249
Raster-Based Geographic Data Sets—Logical Construction	250
Raster-Based Geographic Data Sets—Layout in the Computer	251
TINs	253
TIN-Based Geographic Data Sets—Layout in the Computer	254
Spatial Reference	255
STEP-BY-STEP	257
EXERCISE 4-1 (WARM-UP)	
Meet ArcToolbox	257
EXERCISE 4-2 (WARM-UP)	
A Look at Some Trivial Personal Geodatabase Feature Classes	259
More Help	260
EXERCISE 4-3 (MINOR PROJECT)	
Adding Tools and Toolboxes to your Toolset	262

EXERCISE 4-4 (MINOR PROJECT)

Making a Personal Geodatabase Feature Class Named TextToFeature	263
Specification of your Input Text File for the “Create Features from Text File” Tool	263
Labeling Features	266
Making Polygons from Lines	268
Areas and Perimeters Examined	269
Labeling Features with Selected Attributes	269

EXERCISE 4-5 (QUICK QUIZ)

Areas and Perimeters	270
-----------------------------	------------

EXERCISE 4-6 (PROJECT)

Making a File Geodatabase Feature Class for Foozit_Court	271
---	------------

EXERCISE 4-7 (EXPLORATION)

Understanding Some Things That Don’t Look Right	272
Computers and Inexact Computation	274

EXERCISE 4-8 (PROJECT)

Geodatabase Topology	276
Creating a New Topology	277
Specifying Which Feature Moves When Features Are Adjusted: Rank	277
Topology Rules	278
Validating Topology	279
A Warning: Changes Made through Topology Are Permanent	281

EXERCISE 4-9 (REVIEW)

Checking, Updating, and Organizing Your Fast Facts File	281
--	------------

CHAPTER 5 Geographic and Attribute Data: Selection, Input, and Editing	283
Concerns about Finding and Collecting Data	283

Contents

Looking for Data on the Internet	284
Steps in Developing the Database	284
GPS and GIS	289
Anatomy of the Acronym: GPS	291
What Time Is It?	294
STEP-BY-STEP	295
EXERCISE 5-1 (WARM-UP)	
<hr/>	
Looking at Areal Representations of the Real World	295
Looking at Reference Systems	296
Looking at Coordinate Systems	298
Using the Reference System to Discover the Boundary Coordinates of a State Plane Zone	299
Primary Lesson	301
EXERCISE 5-2 (PROJECT)	
<hr/>	
Look at Geographic Data on the web	301
EXERCISE 5-3 (PROJECT)	
<hr/>	
Digitizing and Transforming	302
A Plan for Digitizing and Transforming	302
Getting Started	303
Loading an Image File as a Layer in ArcMap	303
Loading the New, Blank Shapefile into ArcMap	305
Adding Line Features to a Shapefile by Using the Editing Facility in ArcMap	305
Converting a Shapefile to a Geodatabase Feature Class and Giving It Real-World Coordinates	309
Converting the Shapefile to a Geodatabase Feature Class	310
Moving the Fozit Court Feature Class into the Real World	310
EXERCISE 5-4 (PROJECT)	
<hr/>	
Digitizing Directly into a Real-World Coordinate System in a Geodatabase	314
Preliminaries	314

Making the Feature Class That Will Be the Object of the Digitization	315
Georeferencing	315
Moving the Sketch to UTM Zone 2	317
Digitizing the Line Boundaries of the Islands	318
Making Polygons of the Digitized Lines	318
Making Multipart Polygons	319
Five islands divided by county and agency	319
Merging Multipart Polygons	320
EXERCISE 5-5 (WARM-UP)	
<hr/>	
Digitizing Geodatabase Polygons and Exploring Topology	321
Making Copies of the Feature Class	322
Using “Clip” to Remove Overlaps from the Feature Class	323
Using Topology to Remove Overlaps from the Feature Class	324
EXERCISE 5-6 (PROJECT)	
<hr/>	
Learning Some Editor Fundamentals	326
The Concept of the Edit Sketch	326
Making Sketches with Snapping	326
Experimenting with Editing Polygons	329
Experimenting with Editor’s Union	329
Experimenting with the Editor’s Intersect	330
Experimenting with the Editor’s Buffer Capabilities	330
Using Undo, Redo, Copy, and Cut	330
Working with Line Editing Again	331
EXERCISE 5-7 (FOLLOW-ON)	
<hr/>	
Adding the Sixth Island	331
Creating a 3-D Feature	333
EXERCISE 5-8 (PROJECT)	
<hr/>	
Obtaining Field Data and Joining Tables	335
Organization	336
Environment and Measurement (Spatial Data)	336

Contents

Measurements (Non-spatial Data)	337
Recording Data	337
Team Assignments	337
Undertaking the Data Entry Process	338
Making a Table That Contains the Coordinate Data	338
Making a Table That Contains the Student Data	339
Populating the Student_Info Table with Data	340
Joining the Two Tables to Make a Single Table	340
Seeing the Results of the Join	340
EXERCISE 5-9 (REVIEW)	
Checking, Updating, and Organizing Your Fast Facts File	342
PART II Spatial Analysis and Synthesis with GIS	345
CHAPTER 6 Analysis of GIS Data by Simple Examination	347
Information	347
Computer Hardware—What a Computer Does	349
Continuous and Discrete Phenomena	352
Some Implications of Discrete Representation for GIS	355
Scientific Notation, Numerical Significance, Accuracy, and Precision	356
Precision vs. Accuracy	356
Basic Statistics	359
Putting Values into Classes	361
Measurement Scales	361
STEP-BY-STEP	363
EXERCISE 6-1 (PROJECT)	
Reviewing and Learning More of ArcMap	363
Examining the Toolbars	364
Pointing at Records	365
Two Windows Are Available for Selecting	365

Selecting Records (and, Thereby, Features)	366
Looking at the Other Capabilities of the Options Menu	368
Selecting Features (and, Thereby, Records)	368
Quick Selection of Features	368
Selecting by Location	369
Reviewing and Understanding Actions on the Table of Contents	370
Layers and the Data Frames	370
Changing Layer Properties	371

EXERCISE 6-2 (PROJECT)

Categorization and Symbolization	375
Thinking about Maps Again	375
Classification (or Categorization) and Symbolization	375
User Selection of Classes	377
A More Careful Look at Equal Intervals	379
Defined Interval	379
Quantiles	379
Standard Deviation	379
Natural Breaks	380
Normalization	381
Using Charts and Graphs	381
Making a Layout	382

EXERCISE 6-3 (SHORT PROJECT)

Comparing Data Sets: Medically Underserved Areas (MUAs) and Health Professional Shortage Areas (HPSAs)	382
---	------------

EXERCISE 6-4 (MAJOR PROJECT)

Combining Demographic and Geographic Data	386
Obtaining Data from the U.S. Bureau of the Census	387
Converting the Census Data Spreadsheet to dBASEIV Format	388
Using TIGER-Based Street and Block Shapefiles from Esri	390

Contents

	Assessing What We Have and What We Need to Solve the Problem	394
	Converting the Relevant Files to Cartesian Coordinates	395
	Finally	395
	EXERCISE 6-5	
	Determining Proximity of Points to Lines and Other Points	397
	EXERCISE 6-6 (REVIEW)	
	Checking, Updating, and Organizing Your Fast Facts File	399
CHAPTER 7	Creating Spatial Feature Classes Based on Proximity, Overlay, and Attributes	403
	Generating Features Based on Proximity: Buffering	403
	Generating Features by Overlaying	405
	Overlaying with Line and Point Feature Classes	407
	Spatial Joins in General	409
	Deriving Feature Classes by Selecting Attributes: Extraction	410
	STEP-BY-STEP	413
	EXERCISE 7-1 (WARM-UP)	
	Making Trivial Buffers around a Trivial Feature Class	413
	EXERCISE 7-2 (PROJECT)	
	Exploring FEATURE CLASS Buffers with the Wildcat Boat Data	415
	Using ArcToolbox to Make Buffer Zones around the Roads	416
	Variable-Width Buffers	417
	EXERCISE 7-3 (PROJECT)	
	Manipulate Polygon Feature Classes with Union and Extract	419
	Make a New Feature Class from a Subset of Polygons: Extract	423
	More Complex Queries—And’s and Or’s	425
	Other Polygon Spatial Joins: Intersect and Identity	425

EXERCISE 7-4 (PROJECT)	
Use Overlay and Extract with Trivial Point and Line Feature Classes	426
EXERCISE 7-5 (PROJECT)	429
Using Buffer and Overlay Together with Geodatabases	429
The Getrich Saga	429
Deriving Information by Combining Tables	431
Overlaying the Feature Classes	433
EXERCISE 7-6 (PROJECT)	
Building a Model of the Getrich Project Solution	435
Create a Python Script from the Gold Model	439
Modify the Python Script from the Gold Model	440
Execute the Python Script	440
EXERCISE 7-7 (MINOR PROJECT)	
Making Buffers for Solving the Wildcat Boat Problem	441
EXERCISE 7-8 (PROJECT)	
Finding a Site for the Wildcat Boat Facility	442
EXERCISE 7-9 (PROJECT, OPTIONAL)	
Solving a Revised Wildcat Boat Problem	446
Understanding Dissolve	446
Making New Sites that Including the COST_HA Field	447
Considering the Site Eccentricity Criterion	448
Making a Model of the Wildcat Boat Solution	450
EXERCISE 7-11 (REVIEW)	
Checking, Updating, and Organizing Your Fast Facts File	452
CHAPTER 8 Spatial Analysis Based on Raster Data Processing	453
A Really Different Processing Paradigm	453
Facts about Rasters	454

Contents

Coordinate Space	455
Rasters with Integer Cell Values	456
Rasters with Floating-Point Values	459
What Is Raster Storage and Processing Good For?	459
Rasters and Features	461
Rasters: Input, Computation, and Output	461
Where Raster Processing Shines: Cost Incurred Traveling over a Distance	462
Proximity Calculation with Rasters	462
Human Activity, Cost, and Distance	463
Euclidean Distances on the Raster	463
Euclidean Distance and the Spatial Analyst	465
Proving Pythagoras Right	465
Finding the Closest of Multiple Source Cells	466
Excluding Distances beyond a Certain Threshold	467
Other Factors That Influence Cost	467
The Cost Distance Mechanism	468
The Cost Distance Calculation	468
Path Calculation in Euclidean Distance and Cost Distance	469
Understanding How Total Costs Are Calculated	470
Getting More Information: Paths and Allocations	471
Direction and Allocation Rasters for Euclidean Distance	471
Direction and Allocation Rasters for Cost Distance	471
A Major Application of Raster Processing: Hydrology	471
Basic Surface Hydrology	473
Basic Surface Hydrology Concepts	474
Calculating Flow Direction	474
The Ultimate Destination of Water Is Off the Raster Area	475
Flow Accumulation: Drainage Delineation and Rainfall Volume	476
Nonuniform Rainfall	477
Calculating the Length of a Potential Linear Water Body	478
Assigning Identities to Streams	479
Vector vs. Raster Representation	480

Assigning Orders to Stream Links	480
Watersheds and Pour Points	481
STEP-BY-STEP	483
EXERCISE 8-1 (PROJECT)	
Basic Raster Principles and Operations	483
The Raster Calculator—Integer Rasters	486
Arithmetic Calculation	487
Boolean Operations	488
Floating-Point Rasters	489
EXERCISE 8-2 (PROJECT)	
Solving the Original Wildcat Boat Problem with Rasters	491
Setting the General and Raster Environment	491
Converting Features to Rasters	492
Creating Rasters with Linear Features	496
Buffering with Spatial Analyst (Maybe)	497
Buffering—Plan B	498
Reclassifying the Data	498
Adding the Rasters with the Raster Calculator	501
Converting Zones to Regions to Find Individual Sites	502
EXERCISE 8-3 (PROJECT)	
Solving a Wildcat Boat Problem with Different Requirements	503
EXERCISE 8-4 (DEMONSTRATION)	
Making Surfaces with IDW, Spline, Trend, Nearest Neighbor, and Kriging	506
Points and Density	509
Thiessen, Dirichlet, Voronoi (and, of course, Decartes)	509
EXERCISE 8-5 (PROJECT)	
Rasters: Distance and Proximity	511
Making a Raster Showing Straight-Line Distances to a Single Place	511

Contents

Examining Many Source Cells and the Capping Distance	514
Developing a Raster with Cost Distance	516
Creating Direction and Allocation Rasters	518
Using Cost Distance to Make Direction and Allocation Rasters	519
Calculating a Least-Cost Path from “A” to “B”	522
EXERCISE 8-6 (PROJECT)	
<hr/>	
Putting the Tools Together: Find a Site for a Regional Park	523
Setting Things Up	524
Preparing to Create a Cost Surface	526
Building a Cost Surface	527
Improving the Understandability of the Map	529
EXERCISE 8-7 (PROJECT)	
<hr/>	
Watershed Analysis	529
Examining the Surface with Various Spatial Analyst and 3D Tools	530
Determining the Stream Channels	533
Calculating Stream Order	533
Numbering Each Stream Individually	534
Identifying Basins	534
Finding Pollution Culprits	534
EXERCISE 8-8 (REVIEW)	
<hr/>	
Checking, Updating, and Organizing Your Fast Facts File	535
<hr/>	
CHAPTER 9 Other Dimensions, Other Tools, Other Solutions	537
Two Different Third Dimensions: The Temporal and the Vertical Spatial	537
THE THIRD SPATIAL DIMENSION: OVERVIEW	
3-D: 2-D (Spatial) Plus 1-D (Spatial)	539
ArcScene	539
ArcGlobe	540

THE THIRD SPATIAL DIMENSION: STEP-BY-STEP	541
An (Almost) New Software Package: ArcScene	541
EXERCISE 9-1 (PROJECT)	
Experimenting with 3-D	542
ArcScene	542
What's 3-D and What's Not	543
Viewing 3-D Data with Animation	546
Making a TIN and Other 3-D Representations of Elevation	549
Creating DEM files with Kriging	551
Creating a Map of Contour Lines	553
Two-and-a-Half Dimensions (2.5-D): Calculating Volumes	553
Calculating a Volume with ArcGIS	554
Other Neat Stuff You Can Do with 3D Analyst: Viewshed and Hillshade	556
A Closer Look at ArcGlobe and Adding Data to It	558
Making a Terrain	560
THE TIME DIMENSION: OVERVIEW	567
3-D: 2-D (Spatial) Plus 1-D (Temporal)	567
THE TIME DIMENSION: STEP-BY-STEP	569
EXERCISE 9-2 (PROJECT)	
Looking at Infrastructure Changes Occurring over Time	569
Sliding through Time—Seeing Changes in Features at Intervals	573
ADDRESS GEOCODING: OVERVIEW	575
A Second Fundamental Way of Defining Location	575
TIGER/Line Files	576
Precision of the Geographic Coordinates in TIGER Files	578
Address Locators	579
ADDRESS GEOCODING: STEP-BY-STEP	581
EXERCISE 9-3 (PROJECT)	
Experimenting with Addresses and Coordinates	581

Contents

Finding the Geographic Position of an Address “Manually”	582
Making an Address Locator	584
Finding the Geographic Position of an Address “Automatically”	584
TIGER Files and ZIP Codes	585
More to Know—More Information Available	586
ANALYSIS OF NETWORKS: OVERVIEW	587
ANALYSIS OF NETWORKS: STEP-BY-STEP	589
EXERCISE 9-4 (PROJECT)	
Experimenting with Routes and Allocations	589
Finding the Shortest Route to a Facility	593
Allocating Territories to Facilities	595
LINEAR REFERENCING: OVERVIEW	597
LINEAR REFERENCING: STEP-BY-STEP	599
EXERCISE 9-5 (PROJECT)	
Experimenting within Linear Features	599
Intersecting Route Events	603
What’s Not Covered Here	605
EXERCISE 9-6 (REVIEW)	
Checking, Updating, and Organizing Your Fast Facts File	607
Afterword: From Systems to Science by Michael Goodchild	609
Index	611
