Contents

Preface xvii

About the Authors xxi

SECTION

I

Basics of Food Microbiology 1

1

The Trajectory of Food Microbiology 3

Introduction 3

Who's on First? 3

Food Microbiology, Past and Present 4

To the Future and Beyond 8

Summary 10

Suggested reading 10

Questions for critical thought 11

2

Microbial Growth, Survival, and Death in Foods 12

Introduction 12

Food Ecosystems, Homeostasis, and Hurdle Technology 14

Foods as Ecosystems 14

Classical Microbiology and Its Limitations 15

Limitations of Detection and Enumeration Methods 15

Plate Counts 15

Selective, or Differential, Media 15

Most-Probable-Number Methods 17

Enrichment Techniques 18

Physiological States of Bacteria 19

Introduction 19

Injury 19

Viable but Nonculturable 20

Quorum Sensing and Signal Transduction 22

Biofilms 24

Factors That Influence Microbial Growth 25

Intrinsic Factors 25

Extrinsic Factors 31

Homeostasis and Hurdle Technology 34

Growth Kinetics 37

Microbial Physiology and Metabolism 39

Carbon Flow and Substrate-Level Phosphorylation 40

The TCA Cycle Links Glycolysis to Aerobic Respiration 42

Conclusion 42

Summary 43

Suggested reading 44

Questions for critical thought 44

3

Spores and Their Significance 46

Introduction 46

Spores in the Food Industry 46

Low-Acid Canned Foods 47

Bacteriology of Sporeformers of Public Health Significance 49

Heat Resistance of *C. botulinum* Spores 51
 Spoilage of Acid and Low-Acid Canned and
 Vacuum-Packaged Foods by Sporeformers 52

Spore Biology 54

Structure 54
 Macromolecules 55
 Small Molecules 55
 Dormancy 55
 Resistance 55
 Freezing and Desiccation Resistance 57
 Pressure Resistance 58
 γ -Radiation Resistance 58
 UV Radiation Resistance 58
 Chemical Resistance 58
 Heat Resistance 58

The Cycle of Sporulation and Germination 60

Sporulation 60
 Activation 61
 Germination 61
 Outgrowth 62
Summary 62
Suggested reading 63
Questions for critical thought 63

4

Detection and Enumeration of Microbes in Food 64

Introduction 64
Sample Collection and Processing 66
Analysis 68
 Metabolism-Based Methods 70
 Surface Testing 70
Summary 72
Suggested reading 73
Questions for critical thought 73

5

Rapid and Automated Microbial Methods 74

Introduction 74
Sample Processing 75
Requirements and Validation of Rapid Methods 75

Rapid Methods Based on Traditional Methods 77

Immunologically Based Methods 81
Molecular Methods 82
A Potpourri of Rapid Methods 84
Summary 85
Suggested reading 85
Questions for critical thought 86

6

Indicator Microorganisms and Microbiological Criteria 87

Introduction 87
 The Purpose of Microbiological Criteria 87
 The Need To Establish Microbiological Criteria 88
 Definitions 88
 Who Establishes Microbiological Criteria? 89

Sampling Plans 89

Types of Sampling Plans 90

Establishing Limits 91

Indicators of Microbiological Quality 92
 Indicator Microorganisms 92
 Metabolic Products 94

Indicators of Foodborne Pathogens and Toxins 95

Indicator Organisms 98
 Fecal Coliforms and *E. coli* 99
 Metabolic Products 99

Application and Specific Proposals for Microbiological Criteria for Food and Food Ingredients 99

Current Status 100

Summary 103
Suggested reading 103
Questions for critical thought 103

SECTION

II

Foodborne Pathogenic Bacteria 105

7

- Regulatory Issues 107**
- Introduction 107
- U.S. Agencies Involved in Food Regulation 108**
- The USDA 108
- The FDA 111
- The CDC 114
- Surveillance 114**
- When an Outbreak Occurs 117**
- Agroterrorism 119**
- What's Next? 120**
- Global Perspective 120**
- "It Takes a Village" and Maybe More 121**
- Summary 121*
- Suggested reading 122*
- Questions for critical thought 122*

8

-
- Bacillus cereus* 124**
 - Outbreak 124*
 - Introduction 124
 - Characteristics of the Organism 125
 - Environmental Sources 126
 - Foodborne Outbreaks 126
 - Characteristics of Disease 126
 - Dose 127
 - Virulence Factors and Mechanisms of Pathogenicity 127**
 - The Emetic Toxin 128
 - Enterotoxins 128
 - B. cereus* as a Medical Pathogen 128
 - The Spore 130
 - Summary 131*
 - Suggested reading 131*
 - Questions for critical thought 131*

9

-
- Campylobacter* Species 132**
 - Outbreak 132*
 - Introduction 132
 - Characteristics of the Organism 133
 - Environmental Susceptibility 133
 - Reservoirs and Foodborne Outbreaks 133
 - Characteristics of Disease 136
 - C. jejuni* and *C. coli* 136
 - Other *Campylobacter* Species 137
 - Epidemiological Subtyping Systems Useful for Investigating Foodborne Illnesses 137**
 - Infective Dose and Susceptible Populations 137**
 - Virulence Factors and Mechanisms of Pathogenicity 138**
 - Cell Association and Invasion 138
 - Flagella and Motility 138
 - Toxins 139
 - Other Factors 139
 - Autoimmune Diseases 139
 - Immunity 139**
 - Summary 140*
 - Suggested reading 140*
 - Questions for critical thought 140*

10

-
- Clostridium botulinum* 142**
 - Introduction 142
 - Four Faces of Botulism 142
 - Characteristics of the Disease 145
 - Toxic Doses 148**
 - Characteristics of *C. botulinum* 148**
 - Classification 148
 - Tolerance to Preservation Methods 150

Sources of *C. botulinum* 153

Occurrence of *C. botulinum* in the Environment 153

Occurrence of *C. botulinum* in Foods 154

Virulence Factors and Mechanisms of Pathogenicity 155

Structure of the Neurotoxins 155

Genetic Regulation of the Neurotoxins 155

Mode of Action of the Neurotoxins 157

Summary 157

Suggested reading 157

Questions for critical thought 157

11

***Clostridium perfringens* 160**

The Foodborne Illness 160

A Spore's-Eye View of *Clostridium perfringens*

Toxicoinfections 160

Cruel and Unusual Punishment 160

Incidence 161

Vehicles for *C. perfringens* Foodborne Illness 161

Factors Contributing to *C. perfringens* Type A Foodborne Illness 162

Preventing *C. perfringens* Type A Foodborne Illness 162

Identification of *C. perfringens* Type A Foodborne Illness Outbreaks 162

Characteristics of *C. perfringens* Type A Foodborne Illness 163

Infectious Dose for *C. perfringens* Type A Foodborne Illness 163

The Organism 163

Overview 163

Classification: Toxin Typing of *C. perfringens* 164

Control of *C. perfringens* 165

Reservoirs for *C. perfringens* Type A 166

Virulence Factors Contributing to *C. perfringens* Type A Foodborne Illness 166

Heat Resistance 166

C. perfringens Enterotoxin 166

Summary 168

Suggested reading 169

Questions for critical thought 169

12

Enterohemorrhagic *Escherichia coli* 170

Outbreak 170

Introduction 171

Categories of *E. coli* 171

Characteristics of *E. coli* O157:H7 and Non-O157 EHEC 175

Acid Tolerance 175

Antibiotic Resistance 176

Inactivation by Heat and Irradiation 176

Reservoirs of *E. coli* O157:H7 177

Detection of *E. coli* O157:H7 and Other EHEC Strains on Farms 177

Factors Associated with Bovine Carriage of *E. coli* O157:H7 177

Cattle Model for Infection by *E. coli* O157:H7 177

Domestic Animals and Wildlife 178

Humans 178

Disease Outbreaks 178

Geographic Distribution 178

Seasonality of *E. coli* O157:H7 Infection 179

Age of Patients 179

Transmission of *E. coli* O157:H7 179

Examples of Foodborne and Waterborne Outbreaks 179

Characteristics of Disease 181

Infectious Dose 182

Mechanisms of Pathogenicity 183

Attaching and Effacing 183

The Locus of Enterocyte Effacement 183

The 60-MDa Plasmid (pO157) 184

Stxs 185

Conclusion 186

Summary 187

Suggested reading 187

Questions for critical thought 187

13***Listeria monocytogenes* 189*****Outbreak* 189****Introduction 190****Characteristics of the Organism 191**

Classification 191

Susceptibility to Physical and
Chemical Agents 192**Listeriosis and Specific Foods 193**

Ready-to-Eat Foods 193

Milk Products 193

Cheeses 193

Meat and Poultry Products 194

Seafoods 194

Other Foods 195

Environmental Sources of *L. monocytogenes* 195

Food-Processing Plants 195

Prevalence and the Regulatory Status of
L. monocytogenes 196

Human Carriers 199

Foodborne Outbreaks 199**Characteristics of Disease 200****Infectious Dose 201****Virulence Factors and Mechanisms of
Pathogenicity 201**Pathogenicity of *L. monocytogenes* 201

Specific Genes Mediate Pathogenicity 202

Summary* 203**Suggested reading* 203*****Questions for critical thought* 204*****More questions than answers* 204**

14***Salmonella* Species 205*****Outbreak* 205****Introduction 205****Characteristics of the Organism 208**

Biochemical Identification 208

Taxonomy and Nomenclature 209

Serological Identification 209

Physiology 210

Reservoirs 213**Characteristics of Disease 214**

Symptoms and Treatment 214

Preventative Measures 215

Antibiotic Resistance 216

Infectious Dose 216**Pathogenicity and Virulence Factors 217**

Specific and Nonspecific Human Responses 217

Attachment and Invasion 218

Growth and Survival within Host Cells 218

Virulence Plasmids 218

Other Virulence Factors 219

Summary* 220**Suggested reading* 220*****Questions for critical thought* 220**

15***Shigella* Species 222*****Outbreak* 222****Introduction 223**

Classification and Biochemical Characteristics 224

Shigella in Foods 226

Survival and Growth in Foods 226

Characteristics of Disease 227**Foodborne Outbreaks 227****Virulence Factors 228**

Genetic Regulation 228

Conclusions 229***Summary* 229*****Suggested reading* 229*****Questions for critical thought* 230**

16***Staphylococcus aureus* 231*****Outbreak* 231****Characteristics of the Organism 232**

Historical Aspects and General Considerations 232

Sources of Staphylococcal Food
Contamination 232Resistance to Adverse Environmental
Conditions 233**Foodborne Outbreaks 234**

Incidence of Staphylococcal Food Poisoning 234

A Typical Large Staphylococcal Food Poisoning
Outbreak 234

Characteristics of Disease 235

Toxic Dose 236

Toxin Dose Required 236

Microbiology, Toxins, and Pathogenicity 236

Nomenclature, Characteristics, and Distribution of Enterotoxin-Producing Staphylococci 236

Introduction to and Nomenclature of the Staphylococcal Enterotoxins 238

Staphylococcal Regulation of Staphylococcal Enterotoxin Expression 240

Summary 243

Suggested reading 244

Questions for critical thought 244

17

Vibrio Species 245

Outbreak 245

Introduction 246

Characteristics of the Organism 246

Epidemiology 246

Characteristics of Disease 246

Susceptibility to Physical and Chemical Treatments 247

V. cholerae 247

V. mimicus 249

V. parahaemolyticus 250

V. vulnificus 251

V. fluvialis, V. furnissii, V. hollisae, and V. alginolyticus 253

Summary 253

Suggested reading 253

Questions for critical thought 254

18

Yersinia enterocolitica 255

Outbreak 255

Introduction 256

Characteristics of the Organism 256

Classification 256

Susceptibility and Tolerance 257

Characteristics of Infection 258

Reservoirs 259

Foodborne Outbreaks 260

Mechanisms of Pathogenicity 261

Pathological Changes 261

Virulence Determinants 262

Chromosomal Determinants of Virulence 262

Other Virulence Determinants 262

Pathogenesis of *Yersinia*-Induced Autoimmunity 263

Summary 263

Suggested reading 264

Questions for critical thought 264

Other Microbes Important in Food 267

19

Lactic Acid Bacteria and Their Fermentation Products 269

Introduction 269

The Biochemical Foundation of Food Fermentation 269

Catabolic Pathways 271

Genetics of Lactic Acid Bacteria 272

Dairy Fermentations 272

Starter Cultures 275

Production of Aroma Compounds 276

Vegetable Fermentations 276

Ingredients and Additives Used during Fermentations 277

Sauerkraut Fermentation 278

Pickle Fermentation 278

Meat Fermentations 279

Summary 280

Suggested reading 280

Questions for critical thought 281

20**Yeast-Based and Other Fermentations 282****Introduction 282****Fermentations That Use Yeast 283**

Bread 283

Beer 285

Wine 287

Vinegar Fermentation 290**Cocoa and Coffee Fermentations 291**

Cocoa 291

Coffee 293

Fermented Foods of Non-Western Societies 293*Summary 296**Suggested reading 296**Questions for critical thought 297***21****Spoilage Organisms 298****Introduction 298****Meat, Poultry, and Seafood Products 299**

Origin of the Microflora in Meat 299

Origin of the Microflora in Poultry 299

Origins of Microfloras in Finfish 300

Origins of Microfloras in Shellfish 300

Bacterial Attachment to Food Surfaces 300

Microbial Progression during Storage 301

Muscle Tissue as a Growth Medium 302

Factors Influencing Spoilage 304

Control of Spoilage of Muscle Foods 306

Milk and Dairy Products 309

Milk and Dairy Products as Growth Media 309

Psychrotrophic Spoilage 311

Spoilage by Fermentative Nonsporeformers 314

Spore-Forming Bacteria 315

Yeasts and Molds 317

Spoilage of Produce and Grains 317

Types of Spoilage 318

Mechanisms of Spoilage 319

Influence of Physiological State 320

Microbiological Spoilage of Vegetables 320

Microbiological Spoilage of Fruits 322

Microbiological Spoilage of Grains and Grain Products 323

*Summary 325**Suggested reading 325**Questions for critical thought 325***22****Molds 327****Introduction 327****Isolation, Enumeration, and Identification 327*****Aspergillus* Species 332***A. flavus* and *A. parasiticus* 335Other Toxigenic *Aspergilli* 339***Penicillium* Species 341**Significant *Penicillium* Mycotoxins 341**Fusaria and Toxigenic Molds Other than *Aspergilli* and *Penicillia* 344**Toxigenic *Fusarium* Species 344

Other Toxic Molds 347

*Summary 347**Suggested reading 347**Questions for critical thought 348***23****Parasites 349*****Outbreak 349*****Introduction 350****Protozoa 351***Cryptosporidium* spp. 353*Cyclospora cayetanensis* 357*Toxoplasma gondii* 360*Giardia intestinalis* 362

Other Protozoa of Interest 365

Helminths 367

Roundworms (Nematodes) 367

Tapeworms (Cestodes) 371

Flukes (Trematodes) 374

Detection 376**Preventative Measures 376***Summary 377**Suggested reading 377**Questions for critical thought 378*

24

Viruses and Prions 379

Introduction 379

Viruses 380

Elementary Virology 380

Viruses as Agents of Foodborne Illness 383

Bacteriophages in the Dairy Industry 392

Beneficial Uses of Viruses 394

Prions 394

A Short History of the Prion 395

Prion Biology 397

Summary 398

Suggested reading 398

Questions for critical thought 399
