Statistical Tools for Environmental Quality Measurement

Michael E. Ginevan
Douglas E. Splitstone

CHAPMAN & HALL/CRC

A CRC Press Company
Boca Raton London New York Washington, D.C.

Table of Contents

Preface

About the Authors

1 Sample Support and Related Scale Issues in Sampling and Sampling Design

The Story of the Stones
What about Soil?
Assessment of Measurement Variation
Mixing Oil and Water — Useful Sample Compositing
Useful Compositing — The Dirty Floor
Comments on Stuff Blowing in the Wind
A Note on Composite Sampling
Sampling Design
Institutional Impediments to Sampling Design
The Phased Project Effect
Epilogue
References

2 Basic Tools and Concepts Description of Data

Central Tendency or Location
- The Arithmetic Mean
- The Geometric Mean
- The Median
- Discussion

Dispersion
- The Sample Range
- The Interquartile Range
- The Variance and Standard Deviation
- The Logarithmic and Geometric Variance and Standard Deviation
- The Coefficient of Variation (CV)
- Discussion

Some Simple Plots
Box and Whisker Plots
Dot Plots and Histograms
Empirical Cumulative Distribution Plots
Describing the Distribution of Environmental Measurements
The Normal Distribution

©2004 CRC Press LLC

The t Distribution
The Log-Normal Distribution
Does a Particular Statistical Distribution Provide a Useful Model?
The Kolmogorov-Smirnov (K-S) Test for Goodness of Fit
Normal Probability Plots
Testing Goodness of Fit for a Discrete Distribution:
A Poisson Example
Confidence Intervals
Confidence Intervals from the Normal Distribution
Mean and Variance Relationships for Log-Normal Data
Other Intervals for Sample Means
Useful Bounds for Population Percentiles
References

3 Hypothesis Testing

Tests Involving a Single Sample
Test Operating Characteristic
Power Calculation and One Sample Tests
Sample Size
Whose Ox is Being Gored
Nonparametric Tests
Tests Involving Two Samples
    Sample No. 1
    Sample No. 2
Power Calculations for the Two-Sample t-Test
A Rank-Based Alternative to the Two-Sample t-Test
A Simple Two-Sample Quantile Test
More Than Two Populations: Analysis of Variance (ANOVA)
Assumptions Necessary for ANOVA
Power Calculations for ANOVA
Multiway ANOVA
A Nonparametric Alternative to a One-Way ANOVA
Multiple Comparisons: Which Means are Different?
References

4 Correlation and Regression

Correlation and Regression: Association between Pairs of Variables
Spearman's Coefficient of Rank Correlation
Bimodal and Multimodal Data: A Cautionary Note
Linear Regression
Calculation of Residue Decline Curves
    Exponential
    Log-log
    Generalized

©2004 CRC Press LLC

Exponential Decline Curves and the Anatomy of Regression
Other Decline Curves
Regression Diagnostics
Grouped Data: More Than One y for Each x
Another Use of Regression: Log-Log Models for Assessing
Chemical Associations
An Example
A Caveat and a Note on Errors in Variables Models
Calibrating Field Analytical Techniques
Epilogue
References

5 Tools for Dealing with Censored Data

Calibration and Analytical Chemistry
Detection Limits
Quantification Limits
Censored Data
Estimating the Mean and Standard DevIation Using
Linear Regression
Expected Normal Scores
Maximum Likelihood
Multiply Censored Data
Example 5
Statistics
The Regression Table and Plot for the 10 Largest Observations
Estimating the Arithmetic Mean and Upper Bounds on the
Arithmetic Mean
Example 5.2
Statistics
Zero Modified Data
Completely Censored Data
Example 5.3
When All Else Fails
Fiducial Limits
The Next Monitoring Event
Epilogue
References

6 The Promise of the Bootstrap

Introductory Remarks
The Empirical Cumulative Distribution
The Plug-In Principle
The Bootstrap

©2004 CRC Press LLC

Bootstrap Estimation of the 95% UCL
Application of the Central Limit Theorem
The Bootstrap and the Log-Normal Model
Pivotal Quantities
Bootstrap Estimation of CCDF Quantiles
Bootstrap Quantile Estimation
Expected Value or Tolerance Limit
Estimation of Uranium-Radium Ratio
Candidate Ratio Estimators
Data Evaluation
Bootstrap Results
The Bootstrap and Hypothesis Testing
The Bootstrap Alternative to the Two-Sample t-test
Bootstrap to the Rescue!
Epilogue
References

7 Tools for the Analysis of Spatial Data

Available Data
Geostatistical Modeling
    Variograms
Estimation via Ordinary "Kriging"
Nonparametric Geostatistical Analysis
Some Implications of Variography
Estimated Distribution of Total Thorium Concentration
Volume Estimation
More About Variography
A Summary of Geostatistical Concepts and Terms
Epilogue
References

8 Tools for the Analysis of Temporal Data

Basis for Tool Development
ARIMA Models — An Introduction
Autoregressive Models
Moving Average Models
Mixed ARMA Models
Nonstationary Models
Model Identification, Estimation, and Checking
Epilogue
References
