Brief Contents

Preface xvii

About the Authors xxiv

Chapter 1 Introduction 1

Chapter 2 Introduction to Probability 27

Chapter 3 Probability Distributions 62

Chapter 4 Decision Analysis 101

Chapter 5 Utility and Game Theory 157

Chapter 6 Time Series Analysis and Forecasting 188

Chapter 7 Introduction to Linear Programming 245

Chapter 8 Linear Programming: Sensitivity Analysis and Interpretation of Solution 304

Chapter 9 Linear Programming Applications in Marketing, Finance, and Operations Management 358

Chapter 10 Distribution and Network Models 419

Chapter 11 Integer Linear Programming 481

Chapter 12 Advanced Optimization Applications 530

Chapter 13 Project Scheduling: PERT/CPM 585

Chapter 14 Inventory Models 623

Chapter 15 Waiting Line Models 672

Chapter 16 Simulation 712

Chapter 17 Markov Processes 772

Appendix A Building Spreadsheet Models 798

Appendix B Binomial Probabilities 827

Appendix C Poisson Probabilities 834

Appendix D Areas for the Standard Normal Distribution 840

Appendix E Values of $e^{-\lambda}$ 842

Appendix F References and Bibliography 843

Appendix G Self-Test Solutions and Answers to Even-Numbered Problems 845

Index 902

Contents

Preface xvii

About the Authors xxiv

Chapter 1 Introduction 1

1.1 Problem Solving and Decision Making 3
1.2 Quantitative Analysis and Decision Making 5
1.3 Quantitative Analysis 7
Model Development 7
Data Preparation 10
Model Solution 11
Report Generation 13
A Note Regarding Implementation 13
1.4 Models of Cost, Revenue, and Profit 14
Cost and Volume Models 14
Revenue and Volume Models 15
Profit and Volume Models 15
Breakeven Analysis 16
1.5 Quantitative Methods in Practice 17
Methods Used Most Frequently 17
Summary 19
Glossary 19
Problems 20
Case Problem Scheduling a Golf League 23
Appendix 1.1 Using Excel for Breakeven Analysis 23

Chapter 2 Introduction to Probability 27

2.1 Experiments and the Sample Space 29
2.2 Assigning Probabilities to Experimental Outcomes 31
Classical Method 31
Relative Frequency Method 32
Subjective Method 32
2.3 Events and Their Probabilities 33
2.4 Some Basic Relationships of Probability 34
Complement of an Event 34
Addition Law 35
Conditional Probability 38
Multiplication Law 42
2.5 Bayes' Theorem 43
The Tabular Approach 46
2.6 Simpson's Paradox 47
Summary 50
Glossary 50

Problems 51
Case Problem Hamilton County Judges 59
Case Problem College Softball Recruiting 61

Chapter 3 Probability Distributions 62

3.1 Random Variables 64
3.2 Discrete Random Variables 65
Probability Distribution of a Discrete Random Variable 65
Expected Value 67
Variance 68
3.3 Binomial Probability Distribution 69
Nastke Clothing Store Problem 70
Expected Value and Variance for the Binomial Distribution 73
3.4 Poisson Probability Distribution 73
An Example Involving Time Intervals 74
An Example Involving Length or Distance Intervals 74
3.5 Continuous Random Variables 76
Applying the Uniform Distribution 76
Area as a Measure of Probability 77
3.6 Normal Probability Distribution 79
Standard Normal Distribution 80
Computing Probabilities for Any Normal Distribution 84
Grear Tire Company Problem 85
3.7 Exponential Probability Distribution 87
Computing Probabilities for the Exponential Distribution 87
Relationship Between the Poisson and Exponential Distributions 89
Summary 89
Glossary 90
Problems 91
Case Problem Specialty Toys 97
Appendix 3.1 Computing Discrete Probabilities with Excel 98
Appendix 3.2 Computing Probabilities for Continuous Distributions with Excel 99

Chapter 4 Decision Analysis 101

4.1 Problem Formulation 103
Influence Diagrams 104
Payoff Tables 104
Decision Trees 105
4.2 Decision Making Without Probabilities 106
Optimistic Approach 106
Conservative Approach 107
Minimax Regret Approach 107
4.3 Decision Making With Probabilities 109
Expected Value of Perfect Information 112
4.4 Risk Analysis and Sensitivity Analysis 113
Risk Analysis 113
Sensitivity Analysis 114

4.5 Decision Analysis with Sample Information 118
Influence Diagram 119
Decision Tree 120
Decision Strategy 123
Risk Profile 125
Expected Value of Sample Information 128
Efficiency of Sample Information 129
4.6 Computing Branch Probabilities 129
Summary 133
Glossary 133
Problems 135
Case Problem 1 Property Purchase Strategy 148
Case Problem 2 Lawsuit Defense Strategy 149
Appendix 4.1 Decision Analysis with TreePlan 150

Chapter 5 Utility and Game Theory 157

5.1 The Meaning of Utility 158
5.2 Utility and Decision Making 160
The Expected Utility Approach 162
Summary of Steps for Determining the Utility of Money 164
5.3 Utility: Other Considerations 165
Risk Avoiders Versus Risk Takers 165
5.4 Introduction to Game Theory 170
Competing for Market Share 171
Identifying a Pure Strategy 173
5.5 Mixed Strategy Games 174
A Larger Mixed Strategy Game 176
Summary of Steps for Solving Two-Person, Zero-Sum Games 178
Extensions 178
Summary 178
Glossary 179
Problems 179

Chapter 6 Time Series Analysis and Forecasting 188

6.1 Time Series Patterns 190
Horizontal Pattern 190
Trend Pattern 192
Seasonal Pattern 194
Trend and Seasonal Pattern 196
Cyclical Pattern 197
Selecting a Forecasting Method 197
6.2 Forecast Accuracy 199
6.3 Moving Averages and Exponential Smoothing 204
Moving Averages 204
Weighted Moving Averages 207
Exponential Smoothing 208
6.4 Linear Trend Projection 211
6.5 Seasonality 216
Seasonality Without Trend 216

Seasonality with Trend 219
Models Based on Monthly Data 221
Summary 222
Glossary 222
Problems 223
Case Problem 1 Forecasting Food and Beverage Sales 231
Case Problem 2 Forecasting Lost Sales 232
Appendix 6.1 Forecasting with Excel Data Analysis Tools 233
Appendix 6.2 Using CB Predictor for Forecasting 242

Chapter 7 Introduction to Linear Programming 245

7.1 A Simple Maximization Problem 247
Problem Formulation 248
Mathematical Model for the RMC Problem 250
7.2 Graphical Solution Procedure 251
A Note on Graphing Lines 260
Summary of the Graphical Solution Procedure for Maximization Problems 261
Slack Variables 262
7.3 Extreme Points and the Optimal Solution 264
7.4 Computer Solution of the RMC Problem 265
Interpretation of Answer Report 266
7.5 A Simple Minimization Problem 267
Summary of the Graphical Solution Procedure for Minimization Problems 269
Surplus Variables 270
Computer Solution of the M&D Chemicals Problem 271
7.6 Special Cases 272
Alternative Optimal Solutions 272
Infeasibility 272
Unbounded 274
7.7 General Linear Programming Notation 276
Summary 278
Glossary 279
Problems 280
Case Problem 1 Workload Balancing 295
Case Problem 2 Production Strategy 296
Case Problem 3 Hart Venture Capital 297
Appendix 7.1 Solving Linear Programs with Excel 2010 298
Appendix 7.2 Solving Linear Programs with LINGO 301

Chapter 8 Linear Programming: Sensitivity Analysis and Interpretation of Solution 304

8.1 Introduction to Sensitivity Analysis 306
8.2 Objective Function Coefficients 307
8.3 Right-Hand Sides 310
Cautionary Note on the Interpretation of Shadow Prices 314
8.4 Limitations of Classical Sensitivity Analysis 315
Simultaneous Changes 315
Changes in Constraint Coefficients 316
Nonintuitive Shadow Prices 317

8.5 More Than Two Decision Variables 319
Modified RMC Problem 320
Bluegrass Farms Problem 322
8.6 Electronic Communications Problem 325
Problem Formulation 326
Solution and Interpretation 327
Summary 330
Glossary 331
Problems 332
Case Problem 1 Product Mix 351
Case Problem 2 Investment Strategy 352
Case Problem 3 Truck Leasing Strategy 352
Appendix 8.1 Sensitivity Analysis with Excel 353
Appendix 8.2 Sensitivity Analysis with LINGO 354

Chapter 9 Linear Programming Applications in Marketing, Finance, and Operations Management 358

9.1 Marketing Applications 360
Media Selection 360
Marketing Research 363
9.2 Financial Applications 366
Portfolio Selection 366
Financial Planning 369
9.3 Operations Management Applications 373
A Make-or-Buy Decision 373
Production Scheduling 377
Workforce Assignment 384
Blending Problems 389
Summary 393
Problems 394
Case Problem 1 Planning an Advertising Campaign 407
Case Problem 2 Phoenix Computer 408
Case Problem 3 Textile Mill Scheduling 409
Case Problem 4 Workforce Scheduling 410
Case Problem 5 Duke Energy Coal Allocation 412
Appendix 9.1 Excel Solution of Hewlitt Corporation Financial Planning Problem 414

Chapter 10 Distribution and Network Models 419

10.1 Supply Chain Models 420
Transportation Problem 420
Problem Variations 423
A General Linear Programming Model 426
Transshipment Problem 427
Problem Variations 433
A General Linear Programming Model 433
10.2 Assignment Problem 435
Problem Variations 438
A General Linear Programming Model 438

10.3 Shortest-Route Problem 440
A General Linear Programming Model 443
10.4 Maximal Flow Problem 444
10.5 A Production and Inventory Application 448
Summary 451
Glossary 452
Problems 453
Case Problem 1 Solutions Plus 470
Case Problem 2 Supply Chain Design 472
Appendix 10.1 Excel Solution of Transportation, Transshipment, and Assignment Problems 473

Chapter 11 Integer Linear Programming 481

11.1 Types of Integer Linear Programming Models 484
11.2 Graphical and Computer Solutions for an All-Integer Linear Program 485
Graphical Solution of the LP Relaxation 486
Rounding to Obtain an Integer Solution 487
Graphical Solution of the All-Integer Problem 487
Using the LP Relaxation to Establish Bounds 488
Computer Solution 489
11.3 Applications Involving 0-1 Variables 490
Capital Budgeting 490
Fixed Cost 491
Supply Chain Design 493
Bank Location 498
Product Design and Market Share Optimization 500
11.4 Modeling Flexibility Provided by 0-1 Integer Variables 505
Multiple-Choice and Mutually Exclusive Constraints 505
k out of *n* Alternatives Constraint 506
Conditional and Corequisite Constraints 506
A Cautionary Note About Sensitivity Analysis 508
Summary 509
Glossary 509
Problems 510
Case Problem 1 Textbook Publishing 522
Case Problem 2 Yeager National Bank 523
Case Problem 3 Production Scheduling with Changeover Costs 524
Appendix 11.1 Excel Solution of Integer Linear Programs 525
Appendix 11.2 LINGO Solution of Integer Linear Programs 528

Chapter 12 Advanced Optimization Applications 530

12.1 Data Envelopment Analysis 531
Evaluating the Performance of Hospitals 532
Overview of the DEA Approach 533
DEA Linear Programming Model 534
Summary of the DEA Approach 538
12.2 Revenue Management 539
12.3 Portfolio Models and Asset Allocation 545
A Portfolio of Mutual Funds 545

Conservative Portfolio 546
Moderate Risk Portfolio 549
12.4 Nonlinear Optimization—The RMC Problem Revisited 552
An Unconstrained Problem 553
A Constrained Problem 554
Local and Global Optima 557
Shadow Prices 559
12.5 Constructing an Index Fund 561
Summary 565
Glossary 566
Problems 566
Case Problem CAFE Compliance in the Auto Industry 578
Appendix 12.1 Solving Nonlinear Problems with LINGO 580
Appendix 12.2 Solving Nonlinear Problems with Excel Solver 582

Chapter 13 Project Scheduling: PERT/CPM 585

13.1 Project Scheduling Based on Expected Activity Times 586
The Concept of a Critical Path 588
Determining the Critical Path 589
Contributions of PERT/CPM 594
Summary of the PERT/CPM Critical Path Procedure 594
13.2 Project Scheduling Considering Uncertain Activity Times 595
The Daugherty Porta-Vac Project 595
Uncertain Activity Times 597
The Critical Path 599
Variability in Project Completion Time 601
13.3 Considering Time–Cost Trade-Offs 604
Crashing Activity Times 605
Linear Programming Model for Crashing 607
Summary 609
Glossary 609
Problems 610
Case Problem R. C. Coleman 620
Appendix 13.1 Finding Cumulative Probabilities for Normally Distributed Random Variables 621

Chapter 14 Inventory Models 623

14.1 Economic Order Quantity (EOQ) Model 625
The How-Much-to-Order Decision 629
The When-to-Order Decision 630
Sensitivity Analysis for the EOQ Model 631
Excel Solution of the EOQ Model 632
Summary of the EOQ Model Assumptions 633
14.2 Economic Production Lot Size Model 634
Total Cost Model 635
Economic Production Lot Size 637
14.3 Inventory Model with Planned Shortages 637
14.4 Quantity Discounts for the EOQ Model 642

14.5 Single-Period Inventory Model with Probabilistic Demand 644
Neiman Marcus 645
Nationwide Car Rental 648
14.6 Order-Quantity, Reorder Point Model with Probabilistic Demand 650
The How-Much-to-Order Decision 651
The When-to-Order Decision 652
14.7 Periodic Review Model with Probabilistic Demand 654
More Complex Periodic Review Models 657
Summary 658
Glossary 659
Problems 660
Case Problem 1 Wagner Fabricating Company 668
Case Problem 2 River City Fire Department 669
Appendix 14.1 Development of the Optimal Order Quantity (Q) Formula for the EOQ Model 670
Appendix 14.2 Development of the Optimal Lot Size (Q^*) Formula for the Production Lot Size Model 671

Chapter 15 Waiting Line Models 672

15.1 Structure of a Waiting Line System 674
Single-Server Waiting Line 674
Distribution of Arrivals 674
Distribution of Service Times 676
Queue Discipline 677
Steady-State Operation 677
15.2 Single-Server Waiting Line Model with Poisson Arrivals and Exponential Service Times 678
Operating Characteristics 678
Operating Characteristics for the Burger Dome Problem 679
Managers' Use of Waiting Line Models 680
Improving the Waiting Line Operation 680
Excel Solution of Waiting Line Model 681
15.3 Multiple-Server Waiting Line Model with Poisson Arrivals and Exponential Service Times 682
Operating Characteristics 683
Operating Characteristics for the Burger Dome Problem 685
15.4 Some General Relationships for Waiting Line Models 687
15.5 Economic Analysis of Waiting Lines 689
15.6 Other Waiting Line Models 691
15.7 Single-Server Waiting Line Model with Poisson Arrivals and Arbitrary Service Times 691
Operating Characteristics for the $M/G/1$ Model 692
Constant Service Times 693
15.8 Multiple-Server Model with Poisson Arrivals, Arbitrary Service Times, and No Waiting Line 694
Operating Characteristics for the $M/G/k$ Model with Blocked Customers Cleared 694

15.9 Waiting Line Models with Finite Calling Populations 696
Operating Characteristics for the *M*/*M*/1 Model with a Finite Calling Population 697
Summary 699
Glossary 701
Problems 701
Case Problem 1 Regional Airlines 709
Case Problem 2 Office Equipment, Inc. 710

Chapter 16 Simulation 712

16.1 Risk Analysis 715
PortaCom Project 715
What-If Analysis 715
Simulation 717
Simulation of the PortaCom Problem 725
16.2 Inventory Simulation 727
Simulation of the Butler Inventory Problem 730
16.3 Waiting Line Simulation 733
Black Sheep Scarves 733
Customer (Scarf) Arrival Times 733
Customer (Scarf) Service Times 734
Simulation Model 735
Simulation of Black Sheep Scarves 738
Simulation with Two Quality Inspectors 740
Simulation Results with Two Quality Inspectors 742
16.4 Other Simulation Issues 744
Computer Implementation 744
Verification and Validation 745
Advantages and Disadvantages of Using Simulation 745
Summary 746
Glossary 747
Problems 748
Case Problem 1 Tri-State Corporation 756
Case Problem 2 Harbor Dunes Golf Course 758
Case Problem 3 County Beverage Drive-Thru 760
Appendix 16.1 Simulation with Excel 761
Appendix 16.2 Simulation Using Crystal Ball 767

Chapter 17 Markov Processes 772

17.1 Market Share Analysis 774
17.2 Accounts Receivable Analysis 781
Fundamental Matrix and Associated Calculations 783
Establishing the Allowance for Doubtful Accounts 784
Summary 786
Glossary 787
Problems 787
Case Problem Dealer's Absorbing State Probabilities in Blackjack 792
Appendix 17.1 Matrix Notation and Operations 793
Appendix 17.2 Matrix Inversion with Excel 796

Appendix A Building Spreadsheet Models 798

Appendix B Binomial Probabilities 827

Appendix C Poisson Probabilities 834

Appendix D Areas for the Standard Normal Distribution 840

Appendix E Values of $e^{-\lambda}$ 842

Appendix F References and Bibliography 843

Appendix G Self-Test Solutions and Answers to Even-Numbered Problems 845

Index 902
