

# *Linux for Embedded and Real-time Applications*

FOURTH EDITION

Doug Abbott

*Intellimetric Linux for the Real World, Silver City, USA*

Newnes  
An imprint of Elsevier

# **Contents**

|   |             |
|---|-------------|
| <i>Preface .....</i>                                    | <b>xiii</b> |
| <br>  |             |
| <i>Part I Introduction.....</i>                         | <b>1</b>    |
| <br>  |             |
| <i>Chapter 1: The embedded and real-time space.....</i> | <b>3</b>    |
| What is Embedded?.....                                  | 3           |
| What is Real-Time?.....                                 | 4           |
| How and Why Does Linux Fit in?.....                     | 5           |
| Where is Linux Embedded?.....                           | 8           |
| Open Source Licensing.....                              | 9           |
| Alternatives to Linux.....                              | 11          |
| Resources .....   | 14          |
| <br>  |             |
| <i>Chapter 2: Installing linux.....</i>                 | <b>15</b>   |
| Distributions.....                                      | 16          |
| Hardware Requirements .....                             | 20          |
| Installation Scenarios.....                             | 20          |
| DVD or Live CD? .....                                   | 26          |
| Installation Process .....                              | 26          |
| Resources .....   | 28          |
| <br>  |             |
| <i>Chapter 3: Introducing linux .....</i>               | <b>29</b>   |
| Running Linux—KDE .....                                 | 30          |
| Linux Features .....                                    | 32          |
| Protected Mode Architecture.....                        | 34          |
| The Linux Process Model.....                            | 39          |
| The Linux File System .....                             | 41          |
| System Configuration .....                              | 49          |

|  |            |
|--|------------|
| The Shell .....  | 50         |
| Getting Help .....   | 53         |
| Resources .....  | 54         |
| <br>   |            |
| <b>Chapter 4: The host development environment.....</b>                        | <b>55</b>  |
| Cross-Development Tools: the GNU Tool Chain.....                               | 56         |
| Getting and Installing the Software .....                                      | 58         |
| The Terminal Emulator, <code>minicom</code> .....                              | 59         |
| Networking.....  | 61         |
| Resources .....  | 66         |
| <br>   |            |
| <b>Chapter 5: Eclipse integrated development environment .....</b>             | <b>67</b>  |
| Overview .....   | 68         |
| Installation.....  | 72         |
| Using Eclipse .....  | 73         |
| The C Development Environment (CDT).....                                       | 73         |
| The Program .....  | 78         |
| Building the Project.....  | 78         |
| Debugging With CDT .....   | 79         |
| Finish Debugging.....  | 84         |
| Additional Plug-ins.....   | 84         |
| Summary .....  | 85         |
| Resources .....  | 86         |
| <br>   |            |
| <b>Chapter 6: The hardware .....</b>   | <b>87</b>  |
| The ARM Architecture.....  | 87         |
| Open Source Hardware.....  | 88         |
| Setting up the BeagleBone Black.....   | 96         |
| Flash Memory and File Systems .....  | 98         |
| Preparing the Board .....  | 98         |
| Resources .....  | 103        |
| <br>   |            |
| <b>Part II Application programming in a cross-development environment.....</b> | <b>105</b> |
| <b>Chapter 7: Accessing hardware.....</b>                                      | <b>107</b> |
| Review .....   | 107        |

---

|   |            |
|---|------------|
| ARM I/O Architecture .....                            | 108        |
| Accessing I/O From Linux: Our First Program .....     | 109        |
| The led Program .....                                 | 112        |
| A Data Acquisition Example .....                      | 115        |
| Resources .....                                       | 120        |
| <br>  |            |
| <b>Chapter 8: Debugging embedded software.....</b>    | <b>121</b> |
| Remote Debugging With Eclipse .....                   | 121        |
| A Thermostat .....                                    | 126        |
| Host Workstation as Debug Environment .....           | 127        |
| Debugger Services Framework .....                     | 132        |
| Resources .....                                       | 137        |
| <br>  |            |
| <b>Chapter 9: Posix threads.....</b>                  | <b>139</b> |
| Threads .....   | 141        |
| Synchronization: Mutexes .....                        | 143        |
| Communication: Condition Variables .....              | 148        |
| Thread Termination and Cancellation .....             | 149        |
| Pthreads Implementations .....                        | 152        |
| Upgrading the Thermostat .....                        | 153        |
| Debugging Multithreaded Programs .....                | 154        |
| Resources .....                                       | 155        |
| <br>  |            |
| <b>Chapter 10: Embedded networking.....</b>           | <b>157</b> |
| Sockets .....   | 158        |
| A Simple Example .....                                | 161        |
| A Remote Thermostat .....                             | 163        |
| Embedded Web Servers .....                            | 166        |
| “Real” Web Servers .....                              | 171        |
| Resources .....                                       | 172        |
| <br>  |            |
| <b>Chapter 11: Graphics programming with QT .....</b> | <b>173</b> |
| Getting and Installing QT .....                       | 173        |
| QT Basics .....                                       | 174        |
| QT Designer .....                                     | 177        |
| Putting QT on the ARM .....                           | 182        |

|  |     |
|--|-----|
| A Graphical Thermostat .....   | 185 |
| Resources .....  | 185 |
| <br><b>Part III Components and tools.....</b> 187                            |     |
| <b>Chapter 12: Configuring and building the Linux kernel .....</b> 189       |     |
| Getting Started .....  | 190 |
| Patching the Kernel .....  | 193 |
| The Kernel Source Tree .....   | 194 |
| Kernel Makefile .....  | 196 |
| Configuring the Kernel: make config, menuconfig, xconfig.....                | 196 |
| A Problem .....  | 202 |
| Building the Kernel .....  | 203 |
| Booting the New Kernel .....   | 205 |
| Behind the Scenes: What's Really Happening .....                             | 205 |
| Resources .....  | 206 |
| <br><b>Chapter 13: Integrated build environments.....</b> 207                |     |
| The Problem.....   | 207 |
| Buildroot .....  | 208 |
| Open Embedded.....   | 210 |
| Yocto Project .....  | 214 |
| Resources .....  | 217 |
| <br><b>Chapter 14: BusyBox and Linux initialization.....</b> 219             |     |
| Introducing BusyBox .....  | 220 |
| Configuring and Installing BusyBox.....                                      | 220 |
| Using BusyBox .....  | 226 |
| User Space Initialization.....   | 226 |
| Resources .....  | 231 |
| <br><b>Chapter 15: U-boot boot loader and getting ready to ship.....</b> 233 |     |
| U-Boot.....  | 233 |
| Putting the Application in eMMC Flash .....                                  | 240 |
| Resources .....  | 241 |

|   |            |
|---|------------|
| <b>Chapter 16: Source code control – GIT.....</b>           | <b>243</b> |
| Background .....  | 243        |
| Introducing git .....                                       | 245        |
| Configuring git.....  | 250        |
| Graphical git .....   | 251        |
| Resources .....   | 255        |
| <br>  |            |
| <b>Chapter 17: Linux and real-time.....</b>                 | <b>257</b> |
| Hard versus Soft Real-Time .....                            | 257        |
| Why Linux is Not Real-Time.....                             | 258        |
| Two Approaches .....  | 261        |
| Working With PREEMPT_RT .....                               | 267        |
| Wrap Up.....  | 269        |
| Resources .....   | 270        |
| <br>  |            |
| <b>Appendix A: U-boot Commands.....</b>                     | <b>271</b> |
| <b>Appendix B: Why Software Should Not Have Owners.....</b> | <b>277</b> |
| <b>Index .....</b>  | <b>283</b> |
