A CHAPMAN & HALL BOOK

Contents

Preface to the Second Edition.....	xi
Preface to the First Edition	xiii
1. The Role of Statistics in Environmental Science.....	1
1.1 Introduction	1
1.2 Some Examples.....	1
1.3 The Importance of Statistics in the Examples.....	19
1.4 Chapter Summary.....	19
Exercises	20
2. Environmental Sampling.....	23
2.1 Introduction	23
2.2 Simple Random Sampling	24
2.3 Estimation of Population Means.....	24
2.4 Estimation of Population Totals	29
2.5 Estimation of Proportions.....	30
2.6 Sampling and Nonsampling Errors	32
2.7 Stratified Random Sampling	33
2.8 Post-Stratification	38
2.9 Systematic Sampling.....	39
2.10 Other Design Strategies	44
2.11 Ratio Estimation	46
2.12 Double Sampling.....	50
2.13 Choosing Sample Sizes	51
2.14 Unequal-Probability Sampling	53
2.15 The Data Quality Objectives Process	55
2.16 Chapter Summary.....	56
Exercises	58
3. Models for Data.....	61
3.1 Statistical Models	61
3.2 Discrete Statistical Distributions	61
3.2.1 The Hypergeometric Distribution	62
3.2.2 The Binomial Distribution	63
3.2.3 The Poisson Distribution.....	64
3.3 Continuous Statistical Distributions	65
3.3.1 The Exponential Distribution	66
3.3.2 The Normal or Gaussian Distribution	67
3.3.3 The Lognormal Distribution.....	67
3.4 The Linear Regression Model	68
3.5 Factorial Analysis of Variance.....	74

3.5.1	One-Factor Analysis of Variance.....	76
3.5.2	Two-Factor Analysis of Variance.....	76
3.5.3	Three-Factor Analysis of Variance.....	78
3.5.4	Repeated-Measures Designs.....	82
3.5.5	Multiple Comparisons and Contrasts	83
3.6	Generalized Linear Models	84
3.7	Chapter Summary.....	90
	Exercises	91
4.	Drawing Conclusions from Data	97
4.1	Introduction	97
4.2	Observational and Experimental Studies	97
4.3	True Experiments and Quasi-Experiments.....	99
4.4	Design-Based and Model-Based Inference	101
4.5	Tests of Significance and Confidence Intervals	103
4.6	Randomization Tests	105
4.7	Bootstrapping	108
4.8	Pseudoreplication.....	110
4.9	Multiple Testing.....	112
4.10	Meta-Analysis.....	114
4.11	Bayesian Inference	119
4.12	Chapter Summary.....	120
	Exercises	122
5.	Environmental Monitoring	125
5.1	Introduction	125
5.2	Purposely Chosen Monitoring Sites.....	126
5.3	Two Special Monitoring Designs.....	126
5.4	Designs Based on Optimization	129
5.5	Monitoring Designs Typically Used.....	129
5.6	Detection of Changes by Analysis of Variance.....	131
5.7	Detection of Changes Using Control Charts	133
5.8	Detection of Changes Using CUSUM Charts	140
5.9	Chi-Squared Tests for a Change in a Distribution	145
5.10	Chapter Summary.....	149
	Exercises	150
6.	Impact Assessment.....	153
6.1	Introduction	153
6.2	The Simple Difference Analysis with BACI Designs.....	155
6.3	Matched Pairs with a BACI Design	158
6.4	Impact-Control Designs	161
6.5	Before–After Designs.....	162
6.6	Impact-Gradient Designs.....	163
6.7	Inferences from Impact Assessment Studies	163

6.8	Chapter Summary.....	164
	Exercises	165
7.	Assessing Site Reclamation.....	167
7.1	Introduction	167
7.2	Problems with Tests of Significance	167
7.3	The Concept of Bioequivalence.....	168
7.4	Two-Sided Tests of Bioequivalence.....	171
7.5	Chapter Summary.....	176
	Exercises	177
8.	Time Series Analysis	179
8.1	Introduction	179
8.2	Components of Time Series	180
8.3	Serial Correlation	182
8.4	Tests for Randomness.....	186
8.5	Detection of Change Points and Trends	190
8.6	More-Complicated Time Series Models.....	194
8.7	Frequency Domain Analysis.....	201
8.8	Forecasting	202
8.9	Chapter Summary.....	203
	Exercises	204
9.	Spatial-Data Analysis	207
9.1	Introduction	207
9.2	Types of Spatial Data	207
9.3	Spatial Patterns in Quadrat Counts.....	211
9.4	Correlation between Quadrat Counts.....	217
9.5	Randomness of Point Patterns	219
9.6	Correlation between Point Patterns	221
9.7	Mantel Tests for Autocorrelation	222
9.8	The Variogram.....	224
9.9	Kriging.....	228
9.10	Correlation between Variables in Space	230
9.11	Chapter Summary.....	231
	Exercises	233
10.	Censored Data	237
10.1	Introduction	237
10.2	Single Sample Estimation	237
10.3	Estimation of Quantiles	244
10.4	Comparing the Means of Two or More Samples.....	244
10.5	Regression with Censored Data.....	247
10.6	Chapter Summary.....	247
	Exercises	248

11. Monte Carlo Risk Assessment	249
11.1 Introduction	249
11.2 Principles for Monte Carlo Risk Assessment	250
11.3 Risk Analysis Using a Spreadsheet	251
11.4 Chapter Summary.....	253
Exercises	253
12. Final Remarks	255
Appendices	257
References	279
Index	291

Preface to the Second Edition

The main changes for the second edition of the book have been the correction of a few errors that have either been pointed out by readers of the first edition or noticed by me in the updating of references and the text, particularly in terms of the software needed for calculations and changes to the web sites, and the addition of some exercises at the end of chapters. I would particularly like to thank students attending my workshops and courses at statistics.com for helping me to clarify parts of the text that were not altogether clear in the first edition.

The aims of the book are still the same as for the first edition; namely, to introduce environmental scientists and managers to the statistical methods that will be useful for them in their work, and also as a text suitable for a course in statistics for graduate students in the environmental science area.

Bryan Manly
March 2008

Preface to the First Edition

This book is intended to introduce environmental scientists and managers to the statistical methods that will be useful for them in their work. A secondary aim was to produce a text suitable for a course in statistics for graduate students in the environmental science area. I wrote the book because it seemed to me that these groups should really learn about statistical methods in a special way. It is true that their needs are similar in many respects to those working in other areas. However, there are some special topics that are relevant to environmental science to the extent that they should be covered in an introductory text, although they would probably not be mentioned at all in such a text for a more general audience. I refer to environmental monitoring, impact assessment, which all have their own chapters here.

The book is not intended to be a complete introduction to statistics. Rather, it is assumed that readers have already taken a course or read a book on basic methods, covering the ideas of random variation, statistical distributions, tests of significance, and confidence intervals. For those who have done this some time ago, Appendix A is meant to provide a quick refresher course.

A number of people have contributed directly or indirectly to this book. I must first mention Lyman McDonald of West, Inc., Cheyenne, WY, who first stimulated my interest in environmental statistics, as distinct from ecological statistics. Much of the contents of the book are influenced by the discussions that we have had on matters statistical. Jennifer Brown from the University of Canterbury in New Zealand has influenced the contents because we have shared the teaching of several short courses on statistics for environmental scientists and managers. Likewise, sharing a course on statistics for MSc students of environmental science with Caryn Thompson and David Fletcher has also had an effect on the book. Other people are too numerous to name, so I would just like to thank generally those who have contributed data sets, helped me check references and equations, etc.

Most of this book was written in the Department of Mathematics and Statistics at the University of Otago. As usual, the university was generous with the resources that are needed for the major effort of writing a book, including periods of sabbatical leave that enabled me to write large parts of the text without interruptions, and an excellent library.

However, the manuscript would definitely have taken longer to finish if I had not been invited to spend part of the year 2000 as a visiting researcher at the Max Planck Institute for Limnology at Plön in Germany. This enabled me to write the final chapters and put the whole book together. I am very grateful to Winfried Lampert, the Director of the Institute, for his kind invitation to come to Plön, and for allowing me to use the excellent facilities at the Institute while I was there.

The Saul Bellow quotation above may need some explanation. It results from attending meetings where an environmental matter is argued at length, with everyone being ignorant of the true facts of the case. Furthermore, one suspects that some people there would prefer not to know the true facts because this would be likely to end the arguments.
