

Principles of Environmental Economics

Ahmed M. Hussen

Summary contents

| | |
|-------------------------|-------|
| <i>Contents</i> | vii |
| <i>Figures</i> | xiii |
| <i>Tables</i> | xv |
| <i>Case studies</i> | xvi |
| <i>Exhibits</i> | xvii |
| <i>Preface</i> | xviii |
| <i>Acknowledgements</i> | xxiv |
| <i>Introduction</i> | xxv |

PART 1

Fundamental assumptions, concepts, and theories of economics and ecology essential for understanding the links between the natural environment and the human economy 1

- 1 The natural environment and the human economy: the neoclassical economics perspective 3
- 2 The natural environment and the human economy: an ecological perspective 18

PART 2

The economics of the environment: theories and alternative public policy instruments 43

- 3 Fundamentals of the economics of environmental resources: the 'optimal' trade-off between environmental quality and economic goods 45
- 4 The economic theory of pollution control: the optimal level of pollution 67
- 5 The economics of environmental regulations: regulating the environment through judicial procedures 88

| | | |
|---------------|--|-----|
| vi | <i>Summary contents</i> | |
| 6 | The economics of environmental regulations: pollution taxes and transferable emission permits | 106 |
| 7 | Global environmental pollution: acid rain, ozone depletion and global warming | 126 |
| PART 3 | | |
| | Valuing the environment | 141 |
| 8 | Economic valuation of environmental services | 143 |
| 9 | A framework for assessing the worthiness of an environmental project: cost–benefit analysis and others | 172 |
| PART 4 | | |
| | The perennial debates on the biophysical limits to economic growth and the emerging paradigm of sustainable development | 199 |
| 10 | Biophysical limits to economic growth: the Malthusian perspective | 201 |
| 11 | Biophysical limits to economic growth: the neoclassical economics perspective | 221 |
| 12 | Biophysical limits to economic growth: the ecological economics perspective | 243 |
| 13 | The economics of sustainable development | 266 |
| PART 5 | | |
| | The problems of poverty and environmental sustainability in the developing countries of the world | 289 |
| 14 | Population, development and environmental degradation in the developing world | 291 |
| | Appendix A: Resource scarcity, economic efficiency and markets: how the Invisible Hand works | 323 |
| | Appendix B: List of important websites | 335 |
| | <i>Index</i> | 338 |

PART 1

| | |
|---|----------|
| Fundamental assumptions, concepts, and theories of economics and ecology essential for understanding the links between the natural environment and the human economy | 1 |
|---|----------|

| | |
|--|----------|
| 1 The natural environment and the human economy: the neoclassical economics perspective | 3 |
|--|----------|

| | |
|--|----|
| 1.1 <i>Introduction</i> | 3 |
| 1.2 <i>The market as a provider of information on resource scarcity</i> | 5 |
| 1.2.1 <i>Price as an indicator of absolute scarcity</i> | 5 |
| 1.2.2 <i>Price as an indicator of relative scarcity or opportunity cost</i> | 5 |
| 1.2.3 <i>Price as a signal of emerging resource scarcity</i> | 8 |
| 1.3 <i>Factor substitution possibilities, technological changes and resource scarcity</i> | 9 |
| 1.3.1 <i>Factor substitution and its implications for resource scarcity</i> | 9 |
| 1.3.2 <i>Changes in production technology and its implications for resource conservation</i> | 11 |
| 1.4 <i>The human economy and the natural world: the neoclassical worldview</i> | 12 |
| 1.5 <i>Chapter summary</i> | 16 |
| <i>Review and discussion questions</i> | 17 |

| | |
|---|-----------|
| 2 The natural environment and the human economy: an ecological perspective | 18 |
| 2.1 <i>Introduction</i> | 18 |
| 2.2 <i>Ecosystem structure</i> | 20 |

- 2.3 *Ecosystem function* 22
 - 2.3.1 *Materials recycling* 24
 - 2.3.2 *Energy and thermodynamics: why ecosystems need continuous flows of energy from an external source* 26
- 2.4 *Ecological succession* 29
- 2.5 *Ecology and its implications for the human economy* 32
- 2.6 *Applying the tools: sustaining vision* 35
- 2.7 *Chapter summary* 39
- Review and discussion questions* 40

PART 2

- The economics of the environment: theories and alternative public policy instruments** 43
- 3 Fundamentals of the economics of environmental resources: the ‘optimal’ trade-off between environmental quality and economic goods** 45
 - 3.1 *Introduction* 45
 - 3.2 *The economic process and the assimilative capacity of the natural environment* 46
 - 3.3 *Why markets may fail to allocate environmental resources optimally* 51
 - 3.3.1 *Common property resources and the economic problem* 51
 - 3.3.2 *Environmental externalities and their economic consequences* 54
 - 3.4 *The macroeconomic effects of environmental regulation: an overview* 58
 - 3.5 *Chapter summary* 63
 - Review and discussion questions* 64
- 4 The economic theory of pollution control: the optimal level of pollution** 67
 - 4.1 *Introduction* 67
 - 4.2 *Minimization of waste disposal costs* 68
 - 4.2.1 *Pollution control (abatement) costs and their salient properties* 68
 - 4.2.2 *Pollution damage costs and their salient properties* 70
 - 4.3 *The optimal level of pollution* 73
 - 4.4 *Changes in preferences and technology and their effects on the optimal level of pollution* 76
 - 4.5 *An alternative look at market failure* 79
 - 4.6 *The optimal level of pollution: an ecological appraisal* 80
 - 4.7 *Chapter summary* 85
 - Review and discussion questions* 86
- 5 The economics of environmental regulations: regulating the environment through judicial procedures** 88
 - 5.1 *Introduction* 88
 - 5.2 *Environmental regulation through liability laws* 89
 - 5.3 *The property rights or Coasian approach* 92

| | | |
|---------------|---|------------|
| 5.4 | <i>Emission standards</i> | 95 |
| 5.5 | <i>Chapter summary</i> | 103 |
| | <i>Review and discussion questions</i> | 104 |
| 6 | The economics of environmental regulations: pollution taxes and markets for transferable pollution permits | 106 |
| 6.1 | <i>Introduction</i> | 106 |
| 6.2 | <i>Effluent charges</i> | 106 |
| 6.3 | <i>Transferable emission permits</i> | 113 |
| 6.4 | <i>Applying the tools: an evaluation of the emissions trading programs in the United States</i> | 118 |
| 6.4.1 | <i>Programs to phase out leaded gasoline and ozone-depleting chlorofluorocarbons</i> | 118 |
| 6.4.2 | <i>The acid rain control program</i> | 119 |
| 6.5 | <i>Chapter summary</i> | 122 |
| | <i>Review and discussion questions</i> | 124 |
| 7 | Global environmental pollution: acid rain, ozone depletion and global warming | 126 |
| 7.1 | <i>Introduction</i> | 126 |
| 7.2 | <i>Causes and consequences of acid rain</i> | 127 |
| 7.3 | <i>Causes and consequences of the depletion of the ozone layer</i> | 127 |
| 7.4 | <i>Causes and consequences of global warming</i> | 128 |
| 7.5 | <i>International responses to acid rain, ozone depletion and climate change</i> | 131 |
| 7.6 | <i>The economics of atmospheric pollution</i> | 135 |
| 7.7 | <i>Chapter summary</i> | 138 |
| PART 3 | | |
| | Valuing the environment | 141 |
| 8 | Economic valuation of environmental services | 143 |
| 8.1 | <i>Introduction</i> | 143 |
| 8.2 | <i>Valuation of benefits: the methodological issue</i> | 144 |
| 8.3 | <i>Practical methods for measuring the benefits of environmental improvement</i> | 147 |
| 8.3.1 | <i>The market pricing approach</i> | 148 |
| 8.3.2 | <i>The replacement cost approach</i> | 149 |
| 8.3.3 | <i>Hedonic pricing approaches</i> | 150 |
| 8.3.4 | <i>The household production function approach</i> | 154 |
| 8.3.5 | <i>The contingent valuation method</i> | 156 |
| 8.4 | <i>Critical assessment of the economic approach to environmental valuation</i> | 163 |
| 8.5 | <i>Chapter summary</i> | 168 |
| | <i>Review and discussion questions</i> | 169 |

| | |
|---|------------|
| 9 A framework for assessing the worthiness of an environmental project: cost–benefit analysis and others | 172 |
| 9.1 <i>Introduction</i> | 172 |
| 9.2 <i>The welfare foundation of cost–benefit analysis</i> | 174 |
| 9.3 <i>The net present value criterion</i> | 176 |
| 9.4 <i>Private versus public project appraisal</i> | 178 |
| 9.4.1 <i>Estimation of benefits</i> | 178 |
| 9.4.2 <i>Estimation of costs</i> | 181 |
| 9.4.3 <i>Choice of the discount</i> | 182 |
| 9.5 <i>Discounting and intergenerational equity</i> | 183 |
| 9.6 <i>Other environmental project valuation criteria and considerations</i> | 186 |
| 9.6.1 <i>Precautionary principles versus traditional cost–benefit analysis</i> | 187 |
| 9.6.2 <i>Cost-effectiveness analysis versus traditional cost–benefit analysis</i> | 188 |
| 9.6.3 <i>Environmental impact studies versus traditional cost–benefit analysis</i> | 188 |
| 9.6.4 <i>Environmental risk assessment and risk management</i> | 189 |
| 9.6.5 <i>Considerations of social justice and ethics: Rawlsian and environmental justice</i> | 190 |
| 9.7 <i>Chapter summary</i> | 193 |
| <i>Review and discussion questions</i> | 196 |

PART 4

| | |
|---|------------|
| The perennial debate on biophysical limits to economic growth and the emerging paradigm of sustainable development | 199 |
|---|------------|

| | |
|---|------------|
| 10 Biophysical limits to economic growth: the Malthusian perspective | 201 |
| 10.1 <i>Introduction</i> | 201 |
| 10.2 <i>Population, resource scarcity and limits to growth: the simple Malthusian growth doctrine</i> | 201 |
| 10.3 <i>Limits to growth: the Ricardian variation</i> | 205 |
| 10.4 <i>Population, resource use and the environment: the neo-Malthusian variations</i> | 207 |
| 10.4.1 <i>Population as a primary factor in environmental degradation and resource depletion: the Ehrlich perspective</i> | 209 |
| 10.4.2 <i>Affluence and its contribution to environmental degradation</i> | 211 |
| 10.4.3 <i>Technology and its contribution to environmental degradation: the Commoner’s perspective</i> | 212 |
| 10.4.4 <i>The basic lessons of the Ehrlich–Commoner model</i> | 214 |
| 10.5 <i>Has Malthus been discredited?</i> | 217 |
| 10.6 <i>Chapter summary</i> | 218 |
| <i>Review and discussion questions</i> | 219 |

| | |
|---|------------|
| 11 Biophysical limits to economic growth: the neoclassical economics perspective | 221 |
| 11.1 <i>Introduction</i> | 221 |
| 11.2 <i>Increasing resource scarcity: the empirical evidence</i> | 223 |
| 11.2.1 <i>The empirical evidence before the 1970s</i> | 223 |
| 11.2.2 <i>The empirical evidence since the 1970s</i> | 226 |
| 11.2.3 <i>Why past trends of decreasing resource scarcity may not be sustainable</i> | 228 |
| 11.3 <i>Economic growth, the environment and population: the neoclassical perspective</i> | 230 |
| 11.3.1 <i>Economic growth and the environment: the environmental Kuznets curve</i> | 230 |
| 11.3.2 <i>Economic growth and population</i> | 233 |
| 11.4 <i>Chapter summary</i> | 239 |
| <i>Review and discussion questions</i> | 240 |
| | |
| 12 Biophysical limits to economic growth: the ecological economics perspective | 243 |
| 12.1 <i>Introduction</i> | 243 |
| 12.2 <i>Ecological economics: nature and scope</i> | 244 |
| 12.3 <i>The development of ecological economics: a brief historical sketch</i> | 246 |
| 12.4 <i>Biophysical limits and their implications for economic growth</i> | 249 |
| 12.4.1 <i>Kenneth Boulding: ecological limits</i> | 249 |
| 12.4.2 <i>Nicholas Georgescu-Roegen: energy and thermodynamics</i> | 250 |
| 12.4.3 <i>Herman Daly: the steady-state economy</i> | 253 |
| 12.5 <i>Chapter summary</i> | 262 |
| <i>Review and discussion questions</i> | 263 |
| | |
| 13 The economics of sustainable development | 266 |
| 13.1 <i>Introduction</i> | 266 |
| 13.2 <i>Sustainable development: a helpful term or a vague and analytical empty concept?</i> | 269 |
| 13.3 <i>The Hartwick–Solow approach to sustainability</i> | 271 |
| 13.4 <i>The ecological economics approach to sustainability</i> | 275 |
| 13.5 <i>The safe minimum standard approach to sustainability</i> | 277 |
| 13.6 <i>Sustainable national income accounting</i> | 280 |
| 13.7 <i>Operationalizing the principles of sustainability: the case of a company called Interface</i> | 283 |
| 13.8 <i>Chapter summary</i> | 285 |
| <i>Review and discussion questions</i> | 286 |

PART 5

The problems of poverty and environmental sustainability in the developing countries of the world 289

14 Population, development, and environmental degradation in the developing world 291

14.1 *Introduction* 291

14.2 *Global population trends: causes and consequences* 293

14.3 *Understanding poverty and its interactions with population and the environment* 297

14.4 *The failure of past policy measures to alleviate poverty and reduce environmental degradation* 299

14.4.1 *Economic growth and the environment* 301

14.4.2 *International trade, development and the environment* 303

14.4.3 *Governance, economic growth, poverty and the environment* 304

14.5 *New initiatives on poverty and the environment* 307

14.5.1 *Gender equity and the alleviation of poverty, and environmental degradation* 308

14.5.2 *Improving governance for the alleviation of poverty and environmental sustainability* 310

14.5.3 *Empowerment of the poor and environmental sustainability* 311

14.5.4 *Social and economic equity and environmental sustainability* 312

14.6 *Chapter summary* 317

Review and discussion questions 320

Appendix A Resource scarcity, economic efficiency and markets: how the Invisible Hand works 323

A.1 *Introduction* 323

A.2 *Basic assumptions* 323

A.3 *Evaluating the performance of a perfectly competitive market economy* 324

A.3.1 *Consumers' surplus* 326

A.3.2 *Producers' surplus* 328

A.3.3 *Net social surplus and how it is maximized* 328

A.3.4 *Pareto optimality and the Invisible Hand theorem* 329

A.4 *Price as measures of natural resource scarcity* 331

A.5 *Important caveats* 332

A.6 *Summary* 333
