Brief Contents

Preface xxi

About the Authors xxv

Chapter 1	Introduction 1
Chapter 2	An Introduction to Linear Programming 30
Chapter 3	Linear Programming: Sensitivity Analysis and Interpretation of Solution 94
Chapter 4	Linear Programming Applications in Marketing, Finance, and Operations Management 154
Chapter 5	Advanced Linear Programming Applications 216
Chapter 6	Distribution and Network Models 258
Chapter 7	Integer Linear Programming 320
Chapter 8	Nonlinear Optimization Models 369
Chapter 9	Project Scheduling: PERT/CPM 418
Chapter 10	Inventory Models 457
Chapter 11	Waiting Line Models 506
Chapter 12	Simulation 547
Chapter 13	Decision Analysis 610
Chapter 14	Multicriteria Decisions 689
Chapter 15	Time Series Analysis and Forecasting 733
Chapter 16	Markov Processes On Website
Chapter 17	Linear Programming: Simplex Method On Website
Chapter 18	Simplex-Based Sensitivity Analysis and Duality On Website
Chapter 19	Solution Procedures for Transportation and Assignment Problems On Website
Chapter 20	Minimal Spanning Tree On Website
Chapter 21	Dynamic Programming On Website

Appendixes 787

Appendix A	Building Spreadsheet Models 788
Appendix B	Areas for the Standard Normal Distribution 815
Appendix C	Values of $e^{-\lambda}$ 817
Appendix D	References and Bibliography 819
Appendix E	Self-Test Solutions and Answers to Even-Numbered Problems 821

Contents

Preface xxi
About the Authors xxv

Chapter 1 Introduction 1

1.1 Problem Solving and Decision Making 3
1.2 Quantitative Analysis and Decision Making 5
1.3 Quantitative Analysis 7
Model Development 7
Data Preparation 10
Model Solution 11
Report Generation 12
A Note Regarding Implementation 13
1.4 Models of Cost, Revenue, and Profit 14
Cost and Volume Models 14
Revenue and Volume Models 15
Profit and Volume Models 15
Breakeven Analysis 15
1.5 Management Science Techniques 17
Methods Used Most Frequently 18
Summary 19
Glossary 19
Problems 20
***Case Problem* Scheduling a Golf League 25**
Appendix 1.1 Using Excel for Breakeven Analysis 26

Chapter 2 An Introduction to Linear Programming 30

2.1 A Simple Maximization Problem 32
Problem Formulation 33
Mathematical Statement of the Par, Inc., Problem 35
2.2 Graphical Solution Procedure 37
A Note on Graphing Lines 46
Summary of the Graphical Solution Procedure for Maximization Problems 48
Slack Variables 49
2.3 Extreme Points and the Optimal Solution 50
2.4 Computer Solution of the Par, Inc., Problem 52
Interpretation of Computer Output 53

Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

2.5 A Simple Minimization Problem 54
Summary of the Graphical Solution Procedure for Minimization Problems 56
Surplus Variables 57
Computer Solution of the M&D Chemicals Problem 58
2.6 Special Cases 59
Alternative Optimal Solutions 59
Infeasibility 60
Unbounded 62
2.7 General Linear Programming Notation 64
Summary 66
Glossary 67
Problems 68
***Case Problem 1* Workload Balancing 84**
***Case Problem 2* Production Strategy 85**
***Case Problem 3* Hart Venture Capital 86**
Appendix 2.1 Solving Linear Programs with LINGO 87
Appendix 2.2 Solving Linear Programs with Excel Solver 89

Chapter 3 Linear Programming: Sensitivity Analysis and Interpretation of Solution 94

3.1 Introduction to Sensitivity Analysis 96
3.2 Graphical Sensitivity Analysis 97
Objective Function Coefficients 97
Right-Hand Sides 102
3.3 Sensitivity Analysis: Computer Solution 105
Interpretation of Computer Output 105
Cautionary Note on the Interpretation of Dual Values 108
The Modified Par, Inc., Problem 108
3.4 Limitations of Classical Sensitivity Analysis 112
Simultaneous Changes 113
Changes in Constraint Coefficients 114
Nonintuitive Dual Values 114
3.5 The Electronic Communications Problem 118
Problem Formulation 119
Computer Solution and Interpretation 120
Summary 123
Glossary 124
Problems 125
***Case Problem 1* Product Mix 146**
***Case Problem 2* Investment Strategy 147**
***Case Problem 3* TRUCK LEASING STRATEGY 148**
Appendix 3.1 Sensitivity Analysis with Excel Solver 149
Appendix 3.2 Sensitivity Analysis with LINGO 151

Chapter 4 Linear Programming Applications in Marketing, Finance, and Operations Management 154

4.1 Marketing Applications 155
Media Selection 156
Marketing Research 159
4.2 Financial Applications 162
Portfolio Selection 162
Financial Planning 165
4.3 Operations Management Applications 169
A Make-or-Buy Decision 169
Production Scheduling 173
Workforce Assignment 180
Blending Problems 184
Summary 189
Problems 190
***Case Problem 1* Planning An Advertising Campaign 204**
***Case Problem 2* Schneider's Sweet Shop 205**
***Case Problem 3* Textile Mill Scheduling 206**
***Case Problem 4* Workforce Scheduling 208**
***Case Problem 5* Duke Energy Coal Allocation 209**
Appendix 4.1 Excel Solution of Hewlitt Corporation Financial Planning Problem 212

Chapter 5 Advanced Linear Programming Applications 216

5.1 Data Envelopment Analysis 217
Evaluating the Performance of Hospitals 218
Overview of the DEA Approach 218
DEA Linear Programming Model 219
Summary of the DEA Approach 224
5.2 Revenue Management 225
5.3 Portfolio Models and Asset Allocation 231
A Portfolio of Mutual Funds 231
Conservative Portfolio 232
Moderate Risk Portfolio 234
5.4 Game Theory 238
Competing for Market Share 238
Identifying a Pure Strategy Solution 241
Identifying a Mixed Strategy Solution 242
Summary 250
Glossary 250
Problems 250

Chapter 6 Distribution and Network Models 258

6.1 Supply Chain Models 259
Transportation Problem 259
Problem Variations 262
A General Linear Programming Model 265
Transshipment Problem 266
Problem Variations 272
A General Linear Programming Model 272
6.2 Assignment Problem 274
Problem Variations 277
A General Linear Programming Model 277
6.3 Shortest-Route Problem 279
A General Linear Programming Model 282
6.4 Maximal Flow Problem 283
6.5 A Production and Inventory Application 287
Summary 290
Glossary 291
Problems 292
***Case Problem 1* Solutions Plus 309**
***Case Problem 2* Supply Chain Design 311**
Appendix 6.1 Excel Solution of Transportation, Transshipment, and Assignment Problems 312

Chapter 7 Integer Linear Programming 320

7.1 Types of Integer Linear Programming Models 322
7.2 Graphical and Computer Solutions for an All-Integer Linear Program 324
Graphical Solution of the LP Relaxation 325
Rounding to Obtain an Integer Solution 325
Graphical Solution of the All-Integer Problem 326
Using the LP Relaxation to Establish Bounds 326
Computer Solution 327
7.3 Applications Involving 0-1 Variables 328
Capital Budgeting 328
Fixed Cost 329
Distribution System Design 332
Bank Location 337
Product Design and Market Share Optimization 340
7.4 Modeling Flexibility Provided by 0-1 Integer Variables 344
Multiple-Choice and Mutually Exclusive Constraints 344
k out of *n* Alternatives Constraint 345
Conditional and Corequisite Constraints 345
A Cautionary Note About Sensitivity Analysis 347

Copyright 2016 Cengage Learning. All Rights Reserved. May not be copied, scanned, or duplicated, in whole or in part. Due to electronic rights, some third party content may be suppressed from the eBook and/or eChapter(s).
Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

Summary 347
Glossary 348
Problems 349
***Case Problem 1* Textbook Publishing 360**
***Case Problem 2* Yeager National Bank 361**
***Case Problem 3* Production Scheduling with Changeover Costs 362**
***Case Problem 4* Applecore Children's Clothing 363**
Appendix 7.1 Excel Solution of Integer Linear Programs 364
Appendix 7.2 LINGO Solution of Integer Linear Programs 368

Chapter 8 Nonlinear Optimization Models 369

8.1 A Production Application—Par, Inc., Revisited 371
An Unconstrained Problem 371
A Constrained Problem 372
Local and Global Optima 375
Dual Values 378
8.2 Constructing an Index Fund 378
8.3 Markowitz Portfolio Model 383
8.4 Blending: The Pooling Problem 386
8.5 Forecasting Adoption of a New Product 391
Summary 396
Glossary 396
Problems 397
***Case Problem 1* Portfolio Optimization with Transaction Costs 407**
***Case Problem 2* Cafe Compliance in the Auto Industry 410**
Appendix 8.1 Solving Nonlinear Problems with LINGO 412
Appendix 8.2 Solving Nonlinear Problems with Excel Solver 414

Chapter 9 Project Scheduling: PERT/CPM 418

9.1 Project Scheduling Based on Expected Activity Times 419
The Concept of a Critical Path 421
Determining the Critical Path 422
Contributions of PERT/CPM 427
Summary of the PERT/CPM Critical Path Procedure 427
9.2 Project Scheduling Considering Uncertain Activity Times 428
The Daugherty Porta-Vac Project 428
Uncertain Activity Times 430
The Critical Path 432
Variability in Project Completion Time 434
9.3 Considering Time–Cost Trade-Offs 437
Crashing Activity Times 438
Linear Programming Model for Crashing 441

Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

Summary 443
Glossary 443
Problems 444
***Case Problem 1* R. C. Coleman 454**
Appendix 9.1 Finding Cumulative Probabilities for Normally Distributed Random Variables 455

Chapter 10 Inventory Models 457

10.1 Economic Order Quantity (EOQ) Model 459
The How-Much-to-Order Decision 463
The When-to-Order Decision 464
Sensitivity Analysis for the EOQ Model 465
Excel Solution of the EOQ Model 466
Summary of the EOQ Model Assumptions 467
10.2 Economic Production Lot Size Model 468
Total Cost Model 469
Economic Production Lot Size 471
10.3 Inventory Model with Planned Shortages 471
10.4 Quantity Discounts for the EOQ Model 476
10.5 Single-Period Inventory Model with Probabilistic Demand 478
Neiman Marcus 479
Nationwide Car Rental 482
10.6 Order-Quantity, Reorder Point Model with Probabilistic Demand 484
The How-Much-to-Order Decision 485
The When-to-Order Decision 486
10.7 Periodic Review Model with Probabilistic Demand 488
More Complex Periodic Review Models 491
Summary 492
Glossary 492
Problems 493
***Case Problem 1* Wagner Fabricating Company 501**
***Case Problem 2* River City Fire Department 503**
Appendix 10.1 Development of the Optimal Order Quantity (Q) Formula for the EOQ Model 504
Appendix 10.2 Development of the Optimal Lot Size (Q^*) Formula for the Production Lot Size Model 504

Chapter 11 Waiting Line Models 506

11.1 Structure of a Waiting Line System 508
Single-Server Waiting Line 508
Distribution of Arrivals 508
Distribution of Service Times 510

Copyright 2016 Cengage Learning. All Rights Reserved. May not be copied, scanned, or duplicated, in whole or in part. Due to electronic rights, some third party content may be suppressed from the eBook and/or eChapter(s).

Queue Discipline 511
Steady-State Operation 511
11.2 Single-Server Waiting Line Model with Poisson Arrivals and Exponential Service Times 511
Operating Characteristics 511
Operating Characteristics for the Burger Dome Problem 513
Managers' Use of Waiting Line Models 514
Improving the Waiting Line Operation 514
Excel Solution of Waiting Line Model 515
11.3 Multiple-Server Waiting Line Model with Poisson Arrivals and Exponential Service Times 516
Operating Characteristics 517
Operating Characteristics for the Burger Dome Problem 518
11.4 Some General Relationships for Waiting Line Models 521
11.5 Economic Analysis of Waiting Lines 523
11.6 Other Waiting Line Models 525
11.7 Single-Server Waiting Line Model with Poisson Arrivals and Arbitrary Service Times 525
Operating Characteristics for the ***M/G/***1 Model 526
Constant Service Times 527
11.8 Multiple-Server Model with Poisson Arrivals, Arbitrary Service Times, and No Waiting Line 528
Operating Characteristics for the *M/G/k* Model with Blocked Customers Cleared 528
11.9 Waiting Line Models with Finite Calling Populations 530
Operating Characteristics for the *M/M/1* Model with a Finite Calling Population 531
Summary 533
Glossary 535
Problems 535
***Case Problem 1* Regional Airlines 543**
***Case Problem 2* Office Equipment, Inc. 544**

Chapter 12 Simulation 547

12.1 Risk Analysis 550
PortaCom Project 550
What-If Analysis 550
Simulation 552
Simulation of the PortaCom Project 560
12.2 Inventory Simulation 563
Simulation of the Butler Inventory Problem 566
12.3 Waiting Line Simulation 568
Black Sheep Scarves 569

Copyright 2016 Cengage Learning. All Rights Reserved. May not be copied, scanned, or duplicated, in whole or in part. Due to electronic rights, some third party content may be suppressed from the eBook and/or eChapter(s).
Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

Customer (Scarf) Arrival Times 569
Customer (Scarf) Service Times 570
Simulation Model 571
Simulation of Black Sheep Scarves 574
Simulation with Two Quality Inspectors 576
Simulation Results with Two Quality Inspectors 577
12.4 Other Simulation Issues 579
Computer Implementation 579
Verification and Validation 580
Advantages and Disadvantages of Using Simulation 581
Summary 581
Glossary 582
Problems 583
***Case Problem 1* Tri-State Corporation 592**
***Case Problem 2* Harbor Dunes Golf Course 593**
***Case Problem 3* County Beverage Drive-Thru 595**
Appendix 12.1 Simulation with Excel 597
Appendix 12.2 Simulation Using Analytic Solver Platform 603

Chapter 13 Decision Analysis 610

13.1 Problem Formulation 612
Influence Diagrams 613
Payoff Tables 613
Decision Trees 614
13.2 Decision Making Without Probabilities 615
Optimistic Approach 615
Conservative Approach 616
Minimax Regret Approach 616
13.3 Decision Making with Probabilities 618
Expected Value of Perfect Information 621
13.4 Risk Analysis and Sensitivity Analysis 622
Risk Analysis 622
Sensitivity Analysis 623
13.5 Decision Analysis with Sample Information 627
Influence Diagram 628
Decision Tree 629
Decision Strategy 632
Risk Profile 634
Expected Value of Sample Information 637
Efficiency of Sample Information 638
13.6 Computing Branch Probabilities with Bayes' Theorem 638
13.7 Utility Theory 642
Utility and Decision Analysis 644

Copyright 2016 Cengage Learning. All Rights Reserved. May not be copied, scanned, or duplicated, in whole or in part. Due to electronic rights, some third party content may be suppressed from the eBook and/or eChapter(s).
Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

Utility Functions 648
Exponential Utility Function 651
Summary 653
Glossary 653
Problems 655
***Case Problem 1* Property Purchase Strategy 670**
***Case Problem 2* Lawsuit Defense Strategy 671**
Appendix 13.1 Using Analytic Solver Platform to Create Decision Trees 672
Appendix 13.2 Decision Analysis with TreePlan 683

Chapter 14 Multicriteria Decisions 689

14.1 Goal Programming: Formulation and Graphical Solution 690
Developing the Constraints and the Goal Equations 691
Developing an Objective Function with Preemptive Priorities 693
Graphical Solution Procedure 694
Goal Programming Model 697
14.2 Goal Programming: Solving More Complex Problems 698
Suncoast Office Supplies Problem 698
Formulating the Goal Equations 699
Formulating the Objective Function 700
Computer Solution 701
14.3 Scoring Models 704
14.4 Analytic Hierarchy Process 708
Developing the Hierarchy 709
14.5 Establishing Priorities Using AHP 709
Pairwise Comparisons 710
Pairwise Comparison Matrix 711
Synthesization 713
Consistency 714
Other Pairwise Comparisons for the Car Selection Problem 716
14.6 Using AHP to Develop an Overall Priority Ranking 717
Summary 719
Glossary 720
Problems 721
***Case Problem 1* EZ Trailers, Inc. 730**
Appendix 14.1 Scoring Models With Excel 731

Chapter 15 Time Series Analysis and Forecasting 733

15.1 Time Series Patterns 735
Horizontal Pattern 735
Trend Pattern 738

Copyright 2016 Cengage Learning. All Rights Reserved. May not be copied, scanned, or duplicated, in whole or in part. Due to electronic rights, some third party content may be suppressed from the eBook and/or eChapter(s).
Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

Seasonal Pattern 740
Trend and Seasonal Pattern 741
Cyclical Pattern 741
Selecting a Forecasting Method 742
15.2 Forecast Accuracy 744
15.3 Moving Averages and Exponential Smoothing 749
Moving Averages 749
Weighted Moving Averages 752
Exponential Smoothing 753
15.4 Linear Trend Projection 757
15.5 Seasonality 761
Seasonality Without Trend 761
Seasonality with Trend 764
Models Based on Monthly Data 767
Summary 767
Glossary 768
Problems 768
***Case Problem 1* Forecasting Food and Beverage Sales 776**
***Case Problem 2* Forecasting Lost Sales 777**
Appendix 15.1 Forecasting with Excel Data Analysis Tools 778

Chapter 16 Markov Processes On Website

16.1 Market Share Analysis 16-3
16.2 Accounts Receivable Analysis 16-11
Fundamental Matrix and Associated Calculations 16-12
Establishing the Allowance for Doubtful Accounts 16-14
Summary 16-16
Glossary 16-17
Problems 16-17
***Case Problem 1* Dealer's Absorbing State Probabilities in Blackjack 16-22**
Appendix 16.1 Matrix Notation and Operations 16-23
Appendix 16.2 Matrix Inversion with Excel 16-26

Chapter 17 Linear Programming: Simplex Method On Website

17.1 An Algebraic Overview of the Simplex Method 17-2
Algebraic Properties of the Simplex Method 17-3
Determining a Basic Solution 17-3
Basic Feasible Solution 17-4
17.2 Tableau Form 17-5
17.3 Setting up the Initial Simplex Tableau 17-7
17.4 Improving the Solution 17-10

Copyright 2016 Cengage Learning. All Rights Reserved. May not be copied, scanned, or duplicated, in whole or in part. Due to electronic rights, some third party content may be suppressed from the eBook and/or eChapter(s).
Editorial review has deemed that any suppressed content does not materially affect the overall learning experience. Cengage Learning reserves the right to remove additional content at any time if subsequent rights restrictions require it.

17.5 Calculating the Next Tableau 17-12
Interpreting the Results of an Iteration 17-15
Moving Toward a Better Solution 17-15
Summary of the Simplex Method 17-18
17.6 Tableau Form: The General Case 17-19
Greater-Than-or-Equal-to Constraints 17-19
Equality Constraints 17-23
Eliminating Negative Right-Hand-Side Values 17-24
Summary of the Steps to Create Tableau Form 17-25
17.7 Solving a Minimization Problem 17-26
17.8 Special Cases 17-28
Infeasibility 17-28
Unboundedness 17-30
Alternative Optimal Solutions 17-31
Degeneracy 17-32
Summary 17-34
Glossary 17-35
Problems 17-36

Chapter 18 Simplex-Based Sensitivity Analysis and Duality On Website

18.1 Sensitivity Analysis with the Simplex Tableau 18-2
Objective Function Coefficients 18-2
Right-Hand-Side Values 18-6
18.2 Duality 18-13
Economic Interpretation of the Dual Variables 18-16
Using the Dual to Identify the Primal Solution 18-17
Finding the Dual of Any Primal Problem 18-18
Summary 18-20
Glossary 18-20
Problems 18-21

Chapter 19 Solution Procedures for Transportation and Assignment Problems On Website

19.1 Transportation Simplex Method: A Special-Purpose Solution Procedure 19-2
Phase I: Finding an Initial Feasible Solution 19-2
Phase II: Iterating to the Optimal Solution 19-7
Summary of the Transportation Simplex Method 19-17
Problem Variations 19-17
19.2 Assignment Problem: A Special-Purpose Solution Procedure 19-18
Finding the Minimum Number of Lines 19-21
Problem Variations 19-21

Glossary 19-25
Problems 19-26

Chapter 20 Minimal Spanning Tree On Website

20.1 A Minimal Spanning Tree Algorithm 20-2
Glossary 20-5
Problems 20-5

Chapter 21 Dynamic Programming On Website

21.1 A Shortest-Route Problem 21-2
21.2 Dynamic Programming Notation 21-6
21.3 The Knapsack Problem 21-10
21.4 A Production and Inventory Control Problem 21-16
Summary 21-20
Glossary 21-21
Problems 21-22
Case Problem Process Design 21-26

Appendixes 787

Appendix A Building Spreadsheet Models 788

Appendix B Areas for the Standard Normal Distribution 815

Appendix C Values of $e^{-\lambda}$ 817

Appendix D References and Bibliography 819

Appendix E Self-Test Solutions and Answers to Even-Numbered Problems 821

Index 863
