VMware vSphere™ 4 Administration

Instant Reference

Scott Lowe
Jason W. McCarty
Matthew K. Johnson

Wiley Publishing, Inc.

Acknowledgments

Where to start? I'll start with Jase McCarty and Matthew Johnson, who were gracious enough to allow me to join them in writing this book. Guys, it has been great working with you on this book, and I hope that we have the opportunity to do so again in the future.

I'd also like to thank all the fine folks from Wiley, who continue to be a tremendous pleasure to work with. I would ask the same question I asked with my first book—"Who's ready for another one?"—but I'm not sure that I'm ready for a third book just yet. Don't worry, Agatha—when I'm ready for another book, I'll be sure to let you know.

A big thank you goes to Tom Howarth and Rick Scherer, the technical editors, for helping me provide the most technically accurate writing possible. Kudos to Tom—who is British—for remembering not to constantly remind me that it's *virtualisation*, not *virtualization*!

Finally, I'd like to thank all the hardworking members of the VMware community. There is such a tremendous community of forum participants, bloggers, and Twitter users (Twitterers?) who are constantly sharing useful information. Thanks to such people as Eric Siebert, Steve Beaver, Ken Cline, Scott Herold, Duncan Epping, Ed Haletky, Eric Sloof, Mike Laverick, Jason Boche, and Rich Brambley. I know that I have benefited on more than one occasion from their willingness to share what they've learned. To all of you—and the many, many more that I didn't name—thank you.

—Scott Lowe

I would like to thank Sybex for the opportunity to be a member of this project. I was honored to be asked to be a part of it. I would like to thank Matthew Johnson for being my wingman from the beginning of this project. He and I have been in lockstep on the direction of this book, and I thank him for his contributions. I would like to thank Tom Howarth for his technical skills, and this book benefited from his years of experience working as a technical editor. Tom brought a seasoned and objective approach to ensuring content was accurate as well as complete. I would like to thank Scott Lowe for becoming a part

of this project. His expertise and aggressive input made a significant impact on the completion of this book. I would like to thank Agatha Kim and Candace English for their guidance, tremendous effort, and behind-the-scenes work. Without them we would certainly not have succeeded. Agatha is a seasoned acquisitions editor who kept the tempo and pace of this project on track. Candace is an exceptional developmental editor who acted as my glue when my content did not seem to fit just right. Finally, I have to finish by giving thanks to my wife Toni and my children, Emma, Ethan, and Parker. They have been my best source of strength throughout my professional career and my personal life. I would not have been able to achieve the goals, for myself or my family, without their continued support and love.

—Jason W. McCarty

Even at a young age I demonstrated an uncanny ability to be able to take any process or system and find ways to make that system work more efficiently, to streamline it and leave it better than when I first came across it. From the very humble days when I worked at a pizza place, I made improvements in how to make and prepare food. And throughout my professional life I have always remained true to that ability from my time working in finance, redesigning Excel and Access databases, to my time working in IT, finding better ways to accomplish tasks. Process improvement is the one task where I am at my best. And throughout all the challenges it has always been my loving mother who has encouraged and guided my passions in life. To her I dedicate this book and say thank you for all your support and love.

I would also like to take a moment to say thank you to Dan Liptak, Steve Beaver, Sonny Noto, Randy Jones, Patricia Jones, and Cheryl Eagan—each person contributed to helping me get here. Lastly I would like to thank my fellow authors, Jase and Scott, for contributing so much of their personal time to this project.

—Matthew Johnson

About the Authors

Scott Lowe

Scott Lowe is an author, consultant, and blogger who focuses on virtualization, storage, and other enterprise technologies. As the national technical lead for the virtualization practice at ePlus Technology, Scott has been involved in planning, designing, deploying, and troubleshooting VMware virtualization environments for a range of companies both large and small. He also provides technical leadership and training for the entire virtualization practice at a national level. Scott has provided virtualization expertise to companies such as BB&T, NetApp, PPD, Progress Energy, and more.

Scott's experience also extends into a number of other technologies, such as storage area networks (SANs), directory services, and Ethernet/IP networking. His list of industry certifications and accreditations include titles from VMware, Microsoft, and NetApp, among others. In addition, Scott was awarded a VMware vExpert award for his role in the VMware community, one of only 300 people worldwide to have been recognized by VMware for their contributions.

As an author, Scott has contributed to numerous online magazines focused on VMware and related virtualization technologies. He is regularly quoted as a virtualization expert in virtualization news stories. This is his second published book. His first book, *Mastering VMware vSphere 4*, also by Sybex, was published in August 2009.

Scott is perhaps most well known for his acclaimed virtualization blog at `http://blog.scottlowe.org`. VMware, Microsoft, and other virtualization industry leaders regularly refer to content on his site. It is here that Scott shares his love of technology and virtualization with his readers through a wide selection of technical articles.

Jason W. McCarty

Jason McCarty (VCP2/3/4, VMware vExpert 2009) is currently a senior systems engineer with an ASP component of Equifax Inc., in Baton Rouge, LA. As the team lead and virtualization architect, Jason is responsible for managing a datacenter that delivers loan-origination

software to banks, credit unions, and other lending institutions across North America. Jason's education includes a master's of science in engineering technology, a bachelor's of science in electronic engineering technology, and an associate's degree in computer information technology, all of which have contributed to his technical and business success. Jason's background spans approximately 20 years, with technical experience in a wide variety of platforms, and business experience in areas including finance, insurance, academia, and military operations. In addition to his technical and business experience, Jason has taught technology courses as an adjunct instructor at Tulane University College in New Orleans, LA, for three years and at the University of Phoenix in New Orleans, LA, and Baton Rouge, LA for five years. Jason is active in the VMware Community Forums, and has obtained the rank of Virtuoso. He has presented on various topics through the years and maintains a technical blog on his website at `http://jasemccarty.com`.

Matthew Johnson

Matthew Johnson (VCP, CCNA, MCSA) is currently a systems engineer for one of the largest hospitals in the country, managing their virtualization infrastructure. He is tasked with ensuring the hospital's disaster recovery efforts are effective for virtualization as well as setting up, maintaining, and upgrading VMware virtualization. With five years of virtualization experience working for Fortune 100 and other large corporations, Matthew brings a wealth of knowledge to this book. He has documented a working V2P process, is a moderator and contributor on the VMware forums, holds his VCP certification, and has been a featured speaker at VMworld(s) and other virtualization events. He has an undergraduate degree in finance and is currently pursuing his MBA while continuing to work full time with virtualization.

Contents

Introduction *xix*

Part I: Building a VMware vSphere Environment **1**

Chapter 1: Introduction to vSphere 3

Understand the Legacy Features of vSphere 4
VMotion 4
VMware Cluster 6
Distributed Resource Scheduler 6
High Availability 7
VMware vCenter Converter 8
VMware vCenter Update Manager 8
VMware Capacity Planner 9
VMware Consolidated Backup 10
vSphere Client 10
VMware Service Console 11
vSphere Web Access 11
Understand the New Features of vSphere 11
64 Bit 12
Distributed Power Management 12
Enhanced VMotion Compatibility 13
Enhanced Storage VMotion 13
Enhanced High Availability 14
Virtual Machine Scalability 14
vCenter Improvements 15
Fault Tolerance 16
vNetwork Distributed Switch 16
Host Profiles 17
vCenter Linked Mode 17
Virtual Disk Thin Provisioning 17
VMkernel Protection 18
VMware vShield Zones 19
VMware Data Recovery 19

Chapter 2: Installing and Configuring ESX and ESXi 21

Prepare for Installation 22
Identify Hardware Requirements 23
Partitioning and Sizing 25

Install ESX and ESXi in Graphical Mode 26
Install the ESX GUI 26
Install the ESXi GUI 38
Install ESX Text Mode 47
Navigate Text Mode 47
Perform a Scripted Installation Using a USB Device 51
Identify the USB Device 53
Format the USB Key 54
Postinstallation Configurations 55
Configure Network Time Protocol 55
Configure the Firewall 57
Configure the Service Console 58
Configure Active Directory Authentication 64

Chapter 3: Installing and Configuring vCenter Server 69

Prepare for Installation 70
Identify Hardware Requirements 71
Identify Operating System Requirements for vCenter Server and vSphere Client 71
Identify Database Requirements 74
Identify Networking Requirements 75
Identify Authentication Requirements 77
Install a Database 77
Create a vCenter Database in Microsoft SQL Server 2005 77
Create a vCenter Database in Oracle 81
Install vCenter Server 83
Prepare for Installation 84
Install vCenter Server 84
Install Additional Components 89
Install vSphere Client 99
Configure vCenter 100
Connect to vCenter Server 101
Install Plug-ins in vSphere Client 102
Configure Advanced vCenter Server Settings 104
Create a Datacenter 106
Add a Cluster 107
Add a Host 116

Chapter 4: Understanding Licensing 121

Become Familiar with VMware Licensing 122
Review the Versions of vSphere 124
Review the Licensing Method in vSphere 127
Review Licensing of Legacy ESX Hosts 128
Manage Licenses 129
Install Licenses 129

Assign Licenses 133
Remove Licenses 136
Change Licenses Assigned to Assets 138
Install Licenses for Legacy Hosts 139
Review Installed Licenses 142
View Licenses by Product 142
View Licenses by License Key 144
View Licenses by Asset 145

Chapter 5: Upgrading from VI3 to vSphere 147

Prepare for the Upgrade 148
Upgrade vCenter Server 150
Upgrade to vCenter Server 4.0 on the Same System 150
Upgrade to vCenter Server 4.0 on a Different System 152
Perform Postupgrade Tasks 153
Upgrade ESX/ESXi Hosts 157
Upgrade ESX/ESXi Using vCenter Update Manager 158
Perform a Manual In-Place Upgrade 161
Upgrade with a Fresh ESX/ESXi Installation 163
Perform Postupgrade Tasks 164
Upgrade VMware Tools 164
Upgrade Virtual Machine Hardware 165

Part II: Configuring Your vSphere Environment 167

Chapter 6: Creating and Managing Virtual Networking 169

Understand the Basics 170
Work with Virtual Switches 170
Understand Network Services 171
Use NIC Teaming 172
Configure VLANs 172
Use VLAN Tagging 173
View Networking Configuration and Network Adapter Information 173
Network with vSwitches 174
NIC Team the Service Console 175
Assign Static IP Addresses for the Service Console 176
Create a vSwitch for Virtual Machine Networking 176
Network with vNetwork Distributed Switches 180
Configure a vNetwork Distributed Switch 182
Add Additional Hosts and Adapters to a DVS 184
Edit General and Advanced DVS Settings 185
Manage Physical and Virtual Network Adapters 185
Migrate Existing Virtual Adapters into DVS 189
Add a dvPort Group 191

Edit a dvPort Group 192
Create a Private VLAN 193
Migrate VMs to a DVS 194
Understand Advanced Networking 195
Customize MAC Addresses 195
Create a VMkernel Port for Software iSCSI 196
Configure a Service Console Connection for Software iSCSI 197
Troubleshoot Using the Command Line 198
Enable Cisco Discovery Protocol 199
Enable IPv6 200

Chapter 7: Configuring and Managing Storage 203

Become Familiar with Storage Concepts 204
Learn the Basics of Storage in vSphere 204
Learn the Types of Supported Storage 206
Learn the Benefits of Remote Storage 208
Implement Storage 209
Configure Fibre Channel SAN Storage 210
Configure iSCSI SAN Storage 220
Configure NFS Storage 240

Chapter 8: High Availability and Business Continuity 243

Minimize Planned Downtime 244
Configure and Use VMotion 244
Migrate Virtual Disks with Storage VMotion 250
Protect Against Host Failure 251
Set Up VMware High Availability 252
Set Up VMware Fault Tolerance 258
Guard Against VM Failure 265
Enable VM Monitoring 265
Install and Use VMware Consolidated Backup 267

Chapter 9: Managing Virtual Machines 273

Create Virtual Machines 274
Create a New Virtual Machine 274
Clone an Existing Virtual Machine 278
Deploy a Virtual Machine from a Template 281
Create a Template 281
Modify Virtual Machines 285
Reconfigure the Hardware of a Virtual Machine 286
Add Hardware to a Virtual Machine 289
Remove Hardware from a Virtual Machine 293

Manage Virtual Machine Hardware Versions 294
Determine the Virtual Machine Hardware Version 295
Upgrade Virtual Machine Hardware 296
Perform Other Virtual Machine Management Tasks 297
Change the Virtual Machine Power State 297
Work with Virtual Machine Snapshots 298
Install or Upgrade the VMware Tools 302

Chapter 10: Importing and Exporting Virtual Machines 305

Understand the Migration Process 306
Understand the Types of Migrations 306
Review the Components in a Migration 307
Perform a Physical-to-Virtual Migration 309
Perform a Hot Migration 309
Perform a Cold Migration 311
Clean Up After a Migration 313
Troubleshoot Physical-to-Virtual Migrations 315
Perform a Virtual-to-Virtual Migration 316
Migrate to or from a Different VMware Platform 317
Migrate from a Competing Product 322
Use a Virtual-to-Virtual Migration for Reconfiguration 323
Troubleshoot Virtual-to-Virtual Migrations 327
Import an Open Virtualization Format Template 327
Understand OVF Templates 328
Deploy an OVF Template 329

Chapter 11: Configuring Security 331

Configure vCenter Server Access Control 332
Understand vCenter Server's Predefined Roles 332
Customize Roles 334
Manage Permissions 338
Secure vCenter Server 339
Harden the vCenter Server Computer 339
Remove Default Administrative Access to vCenter Server 340
Secure Your ESX and ESXi Hosts 342
Control Network Access to the Service Console 342
Isolate the Management Network 344
Authenticate via a Directory Service 346
Enforce a Password Policy for Local Accounts 347
Delete Unnecessary Local Accounts 348
Enable Lockdown Mode 349
Secure Your Virtual Machines 349
Configure Virtual Machine Isolation 350
Harden the Guest Operating System 352

Chapter 12: Managing Resources and Performance 353

Understand Resource Allocation 354
Allocate Resources to Virtual Machines 355
Allocate Resources in the VM Configuration 355
Guarantee Resources with Reservations 357
Constrain Resource Usage with Limits 359
Control Resource Allocation Using Shares 362
Use Resource Pools 365
Create a Resource Pool 366
Control CPU Allocation with a Resource Pool 367
Control Memory Allocation with a Resource Pool 372
Monitor Performance 372
Identify a Resource-Constrained ESX/ESXi Host 372
Identify a Resource-Constrained Virtual Machine 374

Appendix: Fundamentals of the Command-Line Interface 379
