Chapter 1 An Introduction to Networking 1

Why Use Networks?	2
Types of Networks	3
Peer-to-peer Networks	3
Client/Server Networks	4
LANs, MANs, and WANs	6
Elements Common to Client/Server Networks	9
How Networks Are Used	13
File and Print Services	13
Communications Services	13
Mail Services	14
Internet Services	15
Management Services	15
Becoming a Networking Professional	16
Mastering the Technical Challenges	17
Developing Your “Soft Skills”	18
Pursuing Certification	19
Finding a Job in Networking	20
Joining Professional Associations	21
Chapter Summary	22
Key Terms	24
Review Questions	28

Chapter 2 Networking Standards and the OSI Model . . . 31

Networking Standards Organizations	32
ANSI	33
EIA and TIA	33
IEEE	34
ISO	34
ITU	34
ISOC	35
IANA and ICANN	35
The OSI Model	36
Application Layer	38
Presentation Layer	38
Session Layer	39
Transport Layer	39
Network Layer	42
Data Link Layer	44
Physical Layer	47
Applying the OSI Model	47
Communication Between Two Systems	48
Frame Specifications	50
IEEE Networking Specifications	51
Chapter Summary	52
Key Terms	54
Review Questions	60

Chapter 3 Transmission Basics and Networking Media . . 63

Transmission Basics	64
Analog and Digital Signaling	64
Data Modulation	69
Transmission Direction	70
Relationships Between Nodes	74
Throughput and Bandwidth	74
Baseband and Broadband	76
Transmission Flaws	77

Common Media Characteristics	80
Throughput	80
Cost	80
Size and Scalability	81
Connectors and Media Converters	81
Noise Immunity	82
Coaxial Cable	83
Twisted-Pair Cable	85
STP (Shielded Twisted-Pair)	86
UTP (Unshielded Twisted-Pair)	87
Comparing STP and UTP	90
10BASE-T	91
100BASE-T (Fast Ethernet)	92
1000BASE-T (Gigabit Ethernet over Twisted-pair)	93
1000BASE-CX (Gigabit Ethernet over Twinax)	93
Fiber-Optic Cable	93
SMF (Single-Mode Fiber)	94
MMF (Multimode Fiber)	95
10BASE-FL	97
100BASE-FX	97
1000BASE-LX	98
1000BASE-SX	98
10-Gigabit Fiber-Optic Standards	99
Cable Design and Management	100
Installing Cable	104
Wireless Transmission	108
The Wireless Spectrum	109
Characteristics of Wireless Transmission	110
Infrared Transmission	114
Wireless LAN (WLAN) Architecture	115
Chapter Summary	118
Key Terms	120
Review Questions	132

Chapter 4 Network Protocols 135

Introduction to Protocols	136
TCP/IP (Transmission Control Protocol/Internet Protocol)	137
The TCP/IP Core Protocols	137
Addressing in TCP/IP	148
Assigning IP Addresses	152
Sockets and Ports	158
Addressing in IPv6	160
Host Names and DNS (Domain Name System)	161
Some TCP/IP Application Layer Protocols	169
IPX/SPX (Internetwork Packet Exchange/Sequenced Packet Exchange)	175
The IPX and SPX Protocols	175
Addressing in IPX/SPX	175
NetBIOS and NetBEUI	176
Addressing in NetBEUI	177
WINS (Windows Internet Naming Service)	177
AppleTalk	178
Binding Protocols on a Windows XP Workstation	179
Chapter Summary	180
Key Terms	183
Review Questions	190

Chapter 5 Networking Hardware 193

NICs (Network Interface Cards)	194
Types of NICs	195
Installing NICs	203
Repeaters and Hubs	215
Bridges	218
Switches	221
Installing a Switch	222
Cut-Through Mode	224
Store and Forward Mode	225
Using Switches to Create VLANs	225
Higher-Layer Switches	227

Routers	227
Router Features and Functions	228
Routing Protocols: RIP, OSPF, EIGRP, and BGP	231
Brouters	233
Gateways	233
Chapter Summary	234
Key Terms	237
Review Questions	243

Chapter 6 Topologies and Access Methods 245

Simple Physical Topologies	246
Bus	246
Ring	248
Star	249
Hybrid Physical Topologies	250
Star-Wired Ring	250
Star-Wired Bus	251
Backbone Networks	252
Serial Backbone	252
Distributed Backbone	253
Collapsed Backbone	254
Parallel Backbone	255
Logical Topologies	256
Switching	257
Circuit Switching	257
Message Switching	258
Packet Switching	258
Ethernet	259
CSMA/CD (Carrier Sense Multiple Access with Collision Detection)	259
Switched Ethernet	261
Ethernet Frames	262
PoE (Power over Ethernet)	264
Token Ring	265
FDDI (Fiber Distributed Data Interface)	267
ATM (Asynchronous Transfer Mode)	268

Wireless Networks	270
802.11	270
Bluetooth	275
Infrared (IR)	277
Chapter Summary	280
Key Terms	282
Review Questions	288

Chapter 7 WANs, Internet Access, and Remote Connectivity 291

WAN Essentials	292
WAN Topologies	294
Bus	294
Ring	295
Star	295
Mesh	297
Tiered	297
PSTN	299
X.25 and Frame Relay	302
ISDN	305
T-Carriers	307
Types of T-Carriers	308
T-Carrier Connectivity	309
DSL	312
Types of DSL	312
DSL Connectivity	314
Broadband Cable	316
SONET (Synchronous Optical Network)	318
Wireless WANs and Internet Access	321
IEEE 802.11 Internet Access	321
IEEE 802.16 (WiMAX) Internet Access	323
Satellite Internet Access	324
WAN Technologies Compared	327

Remote Connectivity	328
Dial-up Networking	328
Remote Access Servers	329
Remote Access Protocols	331
Remote Control	332
Terminal Services	335
Web Portals	336
VPNs (Virtual Private Networks)	336
Chapter Summary	338
Key Terms	342
Review Questions	351

Chapter 8 Network Operating Systems and Windows Server 2003-Based Networking 355

Introduction to Network Operating Systems	356
Selecting a Network Operating System	357
Network Operating Systems and Servers	358
Network Operating System Services and Features	359
Client Support	360
Identifying and Organizing Network Elements	365
Sharing Applications	368
Sharing Printers	370
Managing System Resources	372
Introduction to Windows Server 2003	375
Windows Server 2003 Hardware Requirements	377
A Closer Look at Windows Server 2003	378
Windows Server 2003 Memory Model	378
Windows Server 2003 File Systems	380
MMC (Microsoft Management Console)	382
Active Directory	384
Planning for Installation	392
Installing and Configuring a Windows Server 2003 Server	395
The Installation Process	395
Initial Configuration	397
Establishing Users and Groups	399

Internetworking with Other Network Operating Systems	402
Chapter Summary	403
Key Terms	405
Review Questions	412

Chapter 9 Networking with UNIX-Type of Operating Systems. 415

A Brief History of UNIX	416
Varieties of UNIX	417
Proprietary UNIX	418
Open Source UNIX	418
Three Flavors of UNIX	419
UNIX Server Hardware Requirements	420
Solaris Hardware Requirements	421
Linux Hardware Requirements	422
Mac OS X Server Hardware Requirements	423
A Closer Look at UNIX	423
UNIX Multiprocessing	424
The UNIX Memory Model	424
The UNIX Kernel	424
UNIX System File and Directory Structure	425
UNIX System File Services	426
A UNIX Command Sampler	426
Installing Linux	432
Planning a Linux Installation	432
Installing and Configuring Fedora Core	433
Administering a UNIX-Type of Server	434
Establishing Groups and Users on Linux and Solaris	434
Establishing Groups and Users on Mac OS X Server	435
Changing File Access Permissions	438
Connecting to UNIX-Type of Servers	440
Chapter Summary	442
Key Terms	445
Review Questions	447

Chapter 10 NetWare-Based Networking 451

Introduction to NetWare	452
NetWare Server Hardware Requirements	455
A Closer Look at the NetWare 6.5 Operating System	456
NetWare Integrated Kernel	456
NetWare File System	458
eDirectory	460
Planning for Installation	464
Installing and Configuring a NetWare 6.5 Server	466
The Installation Process	466
Establishing Users and Groups	468
Client Services	471
Traditional Client Access	471
Native File Access	472
Browser-Based Access	474
Internetworking with Other Operating Systems	474
Chapter Summary	475
Key Terms	477
Review Questions	479

Chapter 11 In-Depth TCP/IP Networking 481

Designing TCP/IP-Based Networks	482
Subnetting	483
CIDR (Classless Inter-Domain Routing)	491
Internet Gateways	493
NAT (Network Address Translation)	494
ICS (Internet Connection Sharing)	496
Intranets and Extranets	497
TCP/IP Mail Services	498
SMTP (Simple Mail Transfer Protocol)	498
MIME (Multipurpose Internet Mail Extensions)	499
POP (Post Office Protocol)	499
IMAP (Internet Message Access Protocol)	500
Additional TCP/IP Utilities	501
Netstat	502
Nbtstat	503

Nslookup	504
Dig	505
Whois	506
Traceroute (Tracert)	507
Ipconfig	508
Winipcfg	509
Ifconfig	510
VoIP (Voice Over IP)	511
Chapter Summary	515
Key Terms	517
Review Questions	521

Chapter 12 Troubleshooting Network Problems 523

Troubleshooting Methodology	524
Identify the Symptoms and Potential Causes	525
Identify the Affected Area	526
Establish What Has Changed	530
Select the Most Probable Cause	531
Implement an Action Plan and Solution Including Potential Effects . . 537	
Test the Result	541
Identify the Results and Effects of the Solution	542
Document the Solution and Process	542
Help to Prevent Future Problems	545
Troubleshooting Tools	546
Crossover Cable	546
Tone Generator and Tone Locator	546
Multimeter	548
Cable Continuity Testers	549
Cable Performance Testers	551
Network Monitors	552
Protocol Analyzers	554
Wireless Network Testers	556
Chapter Summary	558
Key Terms	560
Review Questions	563

Chapter 13 Ensuring Integrity and Availability 565

What Are Integrity and Availability?	566
Viruses	568
Types of Viruses	569
Virus Characteristics	571
Virus Protection	572
Virus Hoaxes	575
Fault Tolerance	575
Environment	576
Power	576
Topology and Connectivity	580
Servers	584
Storage	587
Data Backup	594
Backup Media and Methods	595
Backup Strategy	598
Disaster Recovery	600
Disaster Recovery Planning	601
Disaster Recovery Contingencies	601
Chapter Summary	602
Key Terms	606
Review Questions	611

Chapter 14 Network Security 615

Security Audits	616
Security Risks	617
Risks Associated with People	618
Risks Associated with Transmission and Hardware	619
Risks Associated with Protocols and Software	620
Risks Associated with Internet Access	621
An Effective Security Policy	622
Security Policy Goals	622
Security Policy Content	624
Response Policy	625
Physical Security	625

Security in Network Design	627
Firewalls	628
Proxy Servers	631
Remote Access	632
Network Operating System Security	633
Logon Restrictions	634
Passwords	635
Encryption	636
Key Encryption	636
PGP (Pretty Good Privacy)	641
SSL (Secure Sockets Layer)	641
SSH (Secure Shell)	642
SCP (Secure CoPy) and SFTP (Secure File Transfer Protocol)	643
IPSec (Internet Protocol Security)	644
Authentication Protocols	644
RADIUS and TACACS	645
PAP (Password Authentication Protocol)	646
CHAP and MS-CHAP	646
EAP (Extensible Authentication Protocol)	649
Kerberos	649
Wireless Network Security	651
WEP (Wired Equivalent Privacy)	651
IEEE 802.11i and WPA (Wi-Fi Protected Access)	653
Chapter Summary	653
Key Terms	656
Review Questions	664

Chapter 15 Implementing and Managing Networks. . . . 667

Project Management	668
Determining Project Feasibility	670
Assessing Needs	671
Setting Project Goals	672
Project Planning	673
Testing and Evaluation	677

Network Management	678
Obtaining Baseline Measurements	678
Performance and Fault Management	680
Asset Management	683
Software Changes	684
Patches	685
Client Upgrades	687
Shared Application Upgrades	688
Network Operating System Upgrades	689
Reversing a Software Upgrade	691
Hardware and Physical Plant Changes	692
Adding or Upgrading Equipment	693
Cabling Upgrades	695
Backbone Upgrades	696
Reversing Hardware Changes	697
Chapter Summary	697
Key Terms	700
Review Questions	702

Appendix A Network+ Examination Objectives 705

Appendix B Network+ Practice Exam 715

Appendix C Visual Guide to Connectors 739

Appendix D Standard Networking Forms 743

Appendix E Answers to Chapter Review Questions 751

Glossary 757

Index 829
