

Design and Analysis of Experiments

Ninth Edition

DOUGLAS C. MONTGOMERY

Arizona State University

WILEY

Contents

Preface	iii
1	
Introduction	1
1.1 Strategy of Experimentation	1
1.2 Some Typical Applications of Experimental Design	7
1.3 Basic Principles	11
1.4 Guidelines for Designing Experiments	13
1.5 A Brief History of Statistical Design	19
1.6 Summary: Using Statistical Techniques in Experimentation	20
1.7 Problems	21
2	
Simple Comparative Experiments	23
2.1 Introduction	24
2.2 Basic Statistical Concepts	25
2.3 Sampling and Sampling Distributions	28
2.4 Inferences About the Differences in Means, Randomized Designs	33
2.4.1 Hypothesis Testing	33
2.4.2 Confidence Intervals	39
2.4.3 Choice of Sample Size	41
2.4.4 The Case Where $\sigma_1^2 \neq \sigma_2^2$	44
2.4.5 The Case Where σ_1^2 and σ_2^2 Are Known	47
2.4.6 Comparing a Single Mean to a Specified Value	47
2.4.7 Summary	48
2.5 Inferences About the Differences in Means, Paired Comparison Designs	50
2.5.1 The Paired Comparison Problem	50
2.5.2 Advantages of the Paired Comparison Design	52
2.6 Inferences About the Variances of Normal Distributions	53
2.7 Problems	55

3

Experiments with a Single Factor: The Analysis of Variance

64

3.1	An Example	65
3.2	The Analysis of Variance	67
3.3	Analysis of the Fixed Effects Model	69
3.3.1	Decomposition of the Total Sum of Squares	69
3.3.2	Statistical Analysis	72
3.3.3	Estimation of the Model Parameters	76
3.3.4	Unbalanced Data	78
3.4	Model Adequacy Checking	78
3.4.1	The Normality Assumption	79
3.4.2	Plot of Residuals in Time Sequence	81
3.4.3	Plot of Residuals Versus Fitted Values	81
3.4.4	Plots of Residuals Versus Other Variables	86
3.5	Practical Interpretation of Results	86
3.5.1	A Regression Model	87
3.5.2	Comparisons Among Treatment Means	88
3.5.3	Graphical Comparisons of Means	88
3.5.4	Contrasts	89
3.5.5	Orthogonal Contrasts	92
3.5.6	Scheffé's Method for Comparing All Contrasts	93
3.5.7	Comparing Pairs of Treatment Means	95
3.5.8	Comparing Treatment Means with a Control	98
3.6	Sample Computer Output	99
3.7	Determining Sample Size	103
3.7.1	Operating Characteristic and Power Curves	103
3.7.2	Confidence Interval Estimation Method	104
3.8	Other Examples of Single-Factor Experiments	105
3.8.1	Chocolate and Cardiovascular Health	105
3.8.2	A Real Economy Application of a Designed Experiment	107
3.8.3	Discovering Dispersion Effects	109
3.9	The Random Effects Model	111
3.9.1	A Single Random Factor	111
3.9.2	Analysis of Variance for the Random Model	112
3.9.3	Estimating the Model Parameters	113
3.10	The Regression Approach to the Analysis of Variance	119
3.10.1	Least Squares Estimation of the Model Parameters	120
3.10.2	The General Regression Significance Test	121
3.11	Nonparametric Methods in the Analysis of Variance	123
3.11.1	The Kruskal–Wallis Test	123
3.11.2	General Comments on the Rank Transformation	124
3.12	Problems	125

4

Randomized Blocks, Latin Squares, and Related Designs

135

4.1	The Randomized Complete Block Design	135
4.1.1	Statistical Analysis of the RCBD	137
4.1.2	Model Adequacy Checking	145
4.1.3	Some Other Aspects of the Randomized Complete Block Design	145
4.1.4	Estimating Model Parameters and the General Regression Significance Test	150

4.2	The Latin Square Design	153
4.3	The Graeco-Latin Square Design	160
4.4	Balanced Incomplete Block Designs	162
4.4.1	Statistical Analysis of the BIBD	163
4.4.2	Least Squares Estimation of the Parameters	167
4.4.3	Recovery of Interblock Information in the BIBD	169
4.5	Problems	171

5

Introduction to Factorial Designs **179**

5.1	Basic Definitions and Principles	179
5.2	The Advantage of Factorials	182
5.3	The Two-Factor Factorial Design	183
5.3.1	An Example	183
5.3.2	Statistical Analysis of the Fixed Effects Model	186
5.3.3	Model Adequacy Checking	191
5.3.4	Estimating the Model Parameters	194
5.3.5	Choice of Sample Size	196
5.3.6	The Assumption of No Interaction in a Two-Factor Model	197
5.3.7	One Observation per Cell	198
5.4	The General Factorial Design	201
5.5	Fitting Response Curves and Surfaces	206
5.6	Blocking in a Factorial Design	215
5.7	Problems	220

6

The 2^k Factorial Design **230**

6.1	Introduction	230
6.2	The 2^2 Design	231
6.3	The 2^3 Design	240
6.4	The General 2^k Design	252
6.5	A Single Replicate of the 2^k Design	254
6.6	Additional Examples of Unreplicated 2^k Designs	268
6.7	2^k Designs are Optimal Designs	280
6.8	The Addition of Center Points to the 2^k Design	285
6.9	Why We Work with Coded Design Variables	290
6.10	Problems	292

7

Blocking and Confounding in the 2^k Factorial Design **308**

7.1	Introduction	308
7.2	Blocking a Replicated 2^k Factorial Design	309
7.3	Confounding in the 2^k Factorial Design	311
7.4	Confounding the 2^k Factorial Design in Two Blocks	311
7.5	Another Illustration of Why Blocking Is Important	319
7.6	Confounding the 2^k Factorial Design in Four Blocks	320

7.7	Confounding the 2^k Factorial Design in 2^p Blocks	322
7.8	Partial Confounding	323
7.9	Problems	325

8

Two-Level Fractional Factorial Designs **328**

8.1	Introduction	329
8.2	The One-Half Fraction of the 2^k Design	329
8.2.1	Definitions and Basic Principles	329
8.2.2	Design Resolution	332
8.2.3	Construction and Analysis of the One-Half Fraction	332
8.3	The One-Quarter Fraction of the 2^k Design	344
8.4	The General 2^{k-p} Fractional Factorial Design	351
8.4.1	Choosing a Design	351
8.4.2	Analysis of 2^{k-p} Fractional Factorials	354
8.4.3	Blocking Fractional Factorials	355
8.5	Alias Structures in Fractional Factorials and Other Designs	360
8.6	Resolution III Designs	362
8.6.1	Constructing Resolution III Designs	362
8.6.2	Fold Over of Resolution III Fractions to Separate Aliased Effects	364
8.6.3	Plackett–Burman Designs	367
8.7	Resolution IV and V Designs	376
8.7.1	Resolution IV Designs	376
8.7.2	Sequential Experimentation with Resolution IV Designs	377
8.7.3	Resolution V Designs	383
8.8	Supersaturated Designs	384
8.9	Summary	385
8.10	Problems	386

9

Additional Design and Analysis Topics for Factorial and Fractional Factorial Designs **405**

9.1	The 3^k Factorial Design	406
9.1.1	Notation and Motivation for the 3^k Design	406
9.1.2	The 3^2 Design	407
9.1.3	The 3^3 Design	408
9.1.4	The General 3^k Design	413
9.2	Confounding in the 3^k Factorial Design	413
9.2.1	The 3^k Factorial Design in Three Blocks	413
9.2.2	The 3^k Factorial Design in Nine Blocks	416
9.2.3	The 3^k Factorial Design in 3^p Blocks	417
9.3	Fractional Replication of the 3^k Factorial Design	418
9.3.1	The One-Third Fraction of the 3^k Factorial Design	418
9.3.2	Other 3^{k-p} Fractional Factorial Designs	421
9.4	Factorials with Mixed Levels	422
9.4.1	Factors at Two and Three Levels	422
9.4.2	Factors at Two and Four Levels	424
9.5	Nonregular Fractional Factorial Designs	425

9.5.1	Nonregular Fractional Factorial Designs for 6, 7, and 8 Factors in 16 Runs	427
9.5.2	Nonregular Fractional Factorial Designs for 9 Through 14 Factors in 16 Runs	436
9.5.3	Analysis of Nonregular Fractional Factorial Designs	441
9.6	Constructing Factorial and Fractional Factorial Designs Using an Optimal Design Tool	442
9.6.1	Design Optimality Criterion	443
9.6.2	Examples of Optimal Designs	443
9.6.3	Extensions of the Optimal Design Approach	453
9.7	Problems	454

10

Fitting Regression Models

(online at www.wiley.com/college/montgomery)

460

10.1	Introduction	461
10.2	Linear Regression Models	461
10.3	Estimation of the Parameters in Linear Regression Models	462
10.4	Hypothesis Testing in Multiple Regression	473
10.4.1	Test for Significance of Regression	473
10.4.2	Tests on Individual Regression Coefficients and Groups of Coefficients	475
10.5	Confidence Intervals in Multiple Regression	478
10.5.1	Confidence Intervals on the Individual Regression Coefficients	478
10.5.2	Confidence Interval on the Mean Response	478
10.6	Prediction of New Response Observations	479
10.7	Regression Model Diagnostics	480
10.7.1	Scaled Residuals and PRESS	480
10.7.2	Influence Diagnostics	483
10.8	Testing for Lack of Fit	483
10.9	Problems	485

11

Response Surface Methods and Designs

489

11.1	Introduction to Response Surface Methodology	490
11.2	The Method of Steepest Ascent	492
11.3	Analysis of a Second-Order Response Surface	497
11.3.1	Location of the Stationary Point	497
11.3.2	Characterizing the Response Surface	499
11.3.3	Ridge Systems	505
11.3.4	Multiple Responses	506
11.4	Experimental Designs for Fitting Response Surfaces	511
11.4.1	Designs for Fitting the First-Order Model	511
11.4.2	Designs for Fitting the Second-Order Model	511
11.4.3	Blocking in Response Surface Designs	518
11.4.4	Optimal Designs for Response Surfaces	521
11.5	Experiments with Computer Models	535
11.6	Mixture Experiments	542
11.7	Evolutionary Operation	553
11.8	Problems	558

12

Robust Parameter Design and Process Robustness

Studies (online at www.wiley.com/college/montgomery)

569

12.1	Introduction	569
12.2	Crossed Array Designs	571
12.3	Analysis of the Crossed Array Design	573
12.4	Combined Array Designs and the Response Model Approach	576
12.5	Choice of Designs	582
12.6	Problems	585

13

Experiments with Random Factors

589

13.1	Random Effects Models	589
13.2	The Two-Factor Factorial with Random Factors	590
13.3	The Two-Factor Mixed Model	597
13.4	Rules for Expected Mean Squares	602
13.5	Approximate F -Tests	605
13.6	Some Additional Topics on Estimation of Variance Components	609
13.6.1	Approximate Confidence Intervals on Variance Components	609
13.6.2	The Modified Large-Sample Method	613
13.7	Problems	615

14

Nested and Split-Plot Designs

618

14.1	The Two-Stage Nested Design	619
14.1.1	Statistical Analysis	619
14.1.2	Diagnostic Checking	624
14.1.3	Variance Components	626
14.1.4	Staggered Nested Designs	626
14.2	The General m -Stage Nested Design	628
14.3	Designs with Both Nested and Factorial Factors	630
14.4	The Split-Plot Design	634
14.5	Other Variations of the Split-Plot Design	640
14.5.1	Split-Plot Designs with More Than Two Factors	640
14.5.2	The Split-Split-Plot Design	645
14.5.3	The Strip-Split-Plot Design	649
14.6	Problems	650

15

Other Design and Analysis Topics

(online at www.wiley.com/college/montgomery)

656

15.1	Nonnormal Responses and Transformations	657
15.1.1	Selecting a Transformation: The Box–Cox Method	657
15.1.2	The Generalized Linear Model	659

15.2	Unbalanced Data in a Factorial Design	666
15.2.1	Proportional Data: An Easy Case	667
15.2.2	Approximate Methods	668
15.2.3	The Exact Method	670
15.3	The Analysis of Covariance	670
15.3.1	Description of the Procedure	671
15.3.2	Computer Solution	679
15.3.3	Development by the General Regression Significance Test	680
15.3.4	Factorial Experiments with Covariates	682
15.4	Repeated Measures	692
15.5	Problems	694

Appendix (online at www.wiley.com/college/montgomery) **697**

Table I.	Cumulative Standard Normal Distribution	698
Table II.	Percentage Points of the t Distribution	700
Table III.	Percentage Points of the χ^2 Distribution	701
Table IV.	Percentage Points of the F Distribution	702
Table V.	Percentage Points of the Studentized Range Statistic	707
Table VI.	Critical Values for Dunnett's Test for Comparing Treatments with a Control	709
Table VII.	Coefficients of Orthogonal Polynomials	711
Table VIII.	Alias Relationships for 2^{k-p} Fractional Factorial Designs with $k \leq 15$ and $n \leq 64$	712

Bibliography (online at www.wiley.com/college/montgomery) **724**

Index **731**
