Preface to the 2nd Edition	v
Preface to the 1st Edition	vii
Contributors	xxi
Frequently Used Notation	xxv
I Value at Risk	1
1 Modeling Dependencies with Copulae	3
<i>Wolfgang Härdle, Ostap Okhrin and Yarema Okhrin</i>	
1.1 Introduction	3
1.2 Bivariate Copulae	4
1.2.1 Copula Families	6
1.2.2 Dependence Measures	9
1.3 Multivariate Copulae	11
1.3.1 Copula Families	13
1.3.2 Dependence Measures	15
1.4 Estimation Methods	17
1.5 Goodness-of-Fit Tests for Copulae	19
1.6 Simulation Methods	21
1.6.1 Conditional Inverse Method	22
1.6.2 Marshal-Olkin Method	22
1.7 Applications to Finance	23
1.7.1 Asset Allocation	24
1.7.2 Value-at-Risk	25
1.7.3 Time Series Modeling	26
1.8 Simulation Study and Empirical Results	28
1.8.1 Simulation Study	28
1.8.2 Empirical Example	30
1.9 Summary	33

2 Quantification of Spread Risk by Means of Historical Simulation 37
Christoph Frisch and Germar Knöchlein

- 2.1 Introduction 37
- 2.2 Risk Categories – a Definition of Terms 37
- 2.3 Yield Spread Time Series 39
 - 2.3.1 Data Analysis 40
 - 2.3.2 Discussion of Results 44
- 2.4 Historical Simulation and Value at Risk 49
 - 2.4.1 Risk Factor: Full Yield 49
 - 2.4.2 Risk Factor: Benchmark 52
 - 2.4.3 Risk Factor: Spread over Benchmark Yield 53
 - 2.4.4 Conservative Approach 54
 - 2.4.5 Simultaneous Simulation 54
- 2.5 Mark-to-Model Backtesting 54
- 2.6 VaR Estimation and Backtesting 55
- 2.7 P-P Plots 59
- 2.8 Q-Q Plots 60
- 2.9 Discussion of Simulation Results 60
 - 2.9.1 Risk Factor: Full Yield 60
 - 2.9.2 Risk Factor: Benchmark 61
 - 2.9.3 Risk Factor: Spread over Benchmark Yield 61
 - 2.9.4 Conservative Approach 62
 - 2.9.5 Simultaneous Simulation 62
- 2.10 Internal Risk Models 63

3 A Copula-Based Model of the Term Structure of CDO Tranches 69
Umberto Cherubini, Sabrina Mulinacci and Silvia Romagnoli

- 3.1 Introduction 69
- 3.2 A Copula-Based Model of Basket Credit Losses Dynamics 71
- 3.3 Stochastic Processes with Dependent Increments 72
- 3.4 An Algorithm for the Propagation of Losses 75
- 3.5 Empirical Analysis 76
- 3.6 Concluding Remarks 80

4 VaR in High Dimensional Systems – a Conditional Correlation Approach 83
Helmut Herwartz and Bruno Pedrinha

- 4.1 Introduction 83
- 4.2 Half-Vec Multivariate GARCH Models 85
- 4.3 Correlation Models 86
 - 4.3.1 Motivation 86

4.3.2	<i>Log-Likelihood Decomposition</i>	87
4.3.3	<i>Constant Conditional Correlation Model</i>	88
4.3.4	<i>Dynamic Conditional Correlation Model</i>	89
4.3.5	<i>Inference in the Correlation Models</i>	90
4.3.6	<i>Generalizations of the DCC Model</i>	92
4.4	<i>Value-at-Risk</i>	92
4.5	<i>An Empirical Illustration</i>	93
4.5.1	<i>Equal and Value Weighted Portfolios</i>	93
4.5.2	<i>Estimation Results</i>	96

II Credit Risk 103

5 Rating Migrations 105

Steffi Höse, Stefan Huschens and Robert Wania

5.1	<i>Rating Transition Probabilities</i>	106
5.1.1	<i>From Credit Events to Migration Counts</i>	106
5.1.2	<i>Estimating Rating Transition Probabilities</i>	107
5.1.3	<i>Dependent Migrations</i>	108
5.1.4	<i>Computational Aspects</i>	111
5.2	<i>Analyzing the Time-Stability of Transition Probabilities</i>	111
5.2.1	<i>Aggregation over Periods</i>	111
5.2.2	<i>Testing the Time-Stability of Transition Probabilities</i>	112
5.2.3	<i>Example</i>	114
5.2.4	<i>Computational Aspects</i>	115
5.3	<i>Multi-Period Transitions</i>	115
5.3.1	<i>Homogeneous Markov Chain</i>	116
5.3.2	<i>Bootstrapping Markov Chains</i>	117
5.3.3	<i>Rating Transitions of German Bank Borrowers</i>	118
5.3.4	<i>Portfolio Migration</i>	119
5.3.5	<i>Computational Aspects</i>	121

6 Cross- and Autocorrelation in Multi-Period Credit Portfolio Models 125

Christoph K.J. Wagner

6.1	<i>Introduction</i>	125
6.2	<i>The Models</i>	127
6.2.1	<i>A Markov-Chain Credit Migration Model</i>	127
6.2.2	<i>The Correlated-Default-Time Model</i>	130
6.2.3	<i>A Discrete Barrier Model</i>	132
6.2.4	<i>The Time-Changed Barrier Model</i>	133

6.3 *Inter-Temporal Dependency and Autocorrelation* 135
 6.4 *Conclusion* 137

7 Risk Measurement with Spectral Capital Allocation **139**

Ludger Overbeck and Maria Sokolova

7.1 *Introduction* 139
 7.2 *Review of Coherent Risk Measures and Allocation* 140
 7.2.1 *Coherent Risk Measures* 140
 7.2.2 *Spectral Risk Measures* 143
 7.2.3 *Coherent Allocation Measures* 144
 7.2.4 *Spectral Allocation Measures* 145
 7.3 *Weight Function and Mixing Measure* 146
 7.4 *Risk Aversion* 146
 7.5 *Implementation* 147
 7.5.1 *Mixing Representation* 148
 7.5.2 *Density Representation* 149
 7.6 *Credit Portfolio Model* 149
 7.7 *Examples* 150
 7.7.1 *Weighting Scheme* 150
 7.7.2 *Concrete Example* 151
 7.8 *Summary* 158

8 Valuation and VaR Computation for CDOs Using Stein's Method **161**

Nicole El Karoui, Ying Jiao, David Kurtz

8.1 *Introduction* 161
 8.1.1 *A Primer on CDO* 161
 8.1.2 *Factor Models* 163
 8.1.3 *Numerical Algorithms* 164
 8.2 *First Order Gauss-Poisson Approximations* 165
 8.2.1 *Stein's Method - the Normal Case* 165
 8.2.2 *First-Order Gaussian Approximation* 167
 8.2.3 *Stein's Method - the Poisson Case* 171
 8.2.4 *First-Order Poisson Approximation* 172
 8.3 *Numerical Tests* 175
 8.3.1 *Validity Domain of the Approximations* 175
 8.3.2 *Stochastic Recovery Rate - Gaussian Case* 177
 8.3.3 *Sensitivity Analysis* 179
 8.4 *Real Life Applications* 180
 8.4.1 *Gaussian Approximation* 180
 8.4.2 *Poisson Approximation* 181

8.4.3 CDO Valuation 182
 8.4.4 Robustness of VaR Computation 184

III Implied Volatility 191

9 Least Squares Kernel Smoothing of the Implied Volatility Smile 193

Matthias R. Fengler and Qihua Wang

9.1 Introduction 193
 9.2 Least Squares Kernel Smoothing of the Smile 194
 9.3 Application 197
 9.3.1 Weighting Functions, Kernels, and Minimization
 Scheme 197
 9.3.2 Data Description and Empirical Demonstration 198
 9.4 Proofs 203

10 Numerics of Implied Binomial Trees 209

Wolfgang Härdle and Alena Myšičková

10.1 Construction of the IBT 210
 10.1.1 The Derman and Kani Algorithm 212
 10.1.2 Compensation 218
 10.1.3 Barle and Cakici Algorithm 219
 10.2 A Simulation and a Comparison of the SPDs 220
 10.2.1 Simulation Using the DK Algorithm 221
 10.2.2 Simulation Using the BC Algorithm 223
 10.2.3 Comparison with the Monte-Carlo Simulation 224
 10.3 Example – Analysis of EUREX Data 227

11 Application of Extended Kalman Filter to SPD Estimation 233

Zdeněk Hlávka and Marek Svojik

11.1 Linear Model 234
 11.1.1 Linear Model for Call Option Prices 235
 11.1.2 Estimation of State Price Density 236
 11.1.3 State-Space Model for Call Option Prices 237
 11.2 Extended Kalman Filter and Call Options 238
 11.3 Empirical Results 239
 11.3.1 Extended Kalman Filtering in Practice 240
 11.3.2 SPD Estimation in 1995 241
 11.3.3 SPD Estimation in 2003 243
 11.4 Conclusions 245

12 Stochastic Volatility Estimation Using Markov Chain Simulation 249

Nikolaus Hautsch and Yangguoyi Ou

- 12.1 *The Standard Stochastic Volatility Model* 250
- 12.2 *Extended SV Models* 252
 - 12.2.1 *Fat Tails and Jumps* 252
 - 12.2.2 *The Relationship Between Volatility and Returns* . . . 254
 - 12.2.3 *The Long Memory SV Model* 256
- 12.3 *MCMC-Based Bayesian Inference* 257
 - 12.3.1 *Bayes’ Theorem and the MCMC Algorithm* 257
 - 12.3.2 *MCMC-Based Estimation of the Standard SV Model* . 261
- 12.4 *Empirical Illustrations* 264
 - 12.4.1 *The Data* 264
 - 12.4.2 *Estimation of SV Models* 265
- 12.5 *Appendix* 270
 - 12.5.1 *Derivation of the Conditional Posterior Distributions* . 270

13 Measuring and Modeling Risk Using High-Frequency Data 275

Wolfgang Härdle, Nikolaus Hautsch and Uta Pigorsch

- 13.1 *Introduction* 275
- 13.2 *Market Microstructure Effects* 277
- 13.3 *Stylized Facts of Realized Volatility* 280
- 13.4 *Realized Volatility Models* 284
- 13.5 *Time-Varying Betas* 285
 - 13.5.1 *The Conditional CAPM* 286
 - 13.5.2 *Realized Betas* 287
- 13.6 *Summary* 289

14 Valuation of Multidimensional Bermudan Options 295

Shih-Feng Huang and Meihui Guo

- 14.1 *Introduction* 295
- 14.2 *Model Assumptions* 296
- 14.3 *Methodology* 298
- 14.4 *Examples* 302
- 14.5 *Conclusion* 308

IV Econometrics	311
15 Multivariate Volatility Models	313
<i>Matthias R. Fengler and Helmut Herwartz</i>	
15.1 Introduction	313
15.1.1 Model Specifications	314
15.1.2 Estimation of the BEKK-Model	316
15.2 An Empirical Illustration	317
15.2.1 Data Description	317
15.2.2 Estimating Bivariate GARCH	318
15.2.3 Estimating the (Co)Variance Processes	320
15.3 Forecasting Exchange Rate Densities	323
16 The Accuracy of Long-term Real Estate Valuations	327
<i>Rainer Schulz, Markus Staiber, Martin Wersing and Axel Werwatz</i>	
16.1 Introduction	327
16.2 Implementation	328
16.2.1 Computation of the Valuations	329
16.2.2 Data	331
16.3 Empirical Results	333
16.3.1 Characterization of the Test Market	333
16.3.2 Horse Race	337
16.4 Conclusion	343
17 Locally Time Homogeneous Time Series Modelling	345
<i>Mstislav Elagin and Vladimir Spokoiny</i>	
17.1 Introduction	345
17.2 Model and Setup	346
17.2.1 Conditional Heteroskedastic Model	346
17.2.2 Parametric and Local Parametric Estimation and Inference	347
17.2.3 Nearly Parametric Case	348
17.3 Methods for the Estimation of Parameters	349
17.3.1 Sequence of Intervals	349
17.3.2 Local Change Point Selection	349
17.3.3 Local Model Selection	350
17.3.4 Stagewise Aggregation	351
17.4 Critical Values and Other Parameters	352
17.5 Applications	354
17.5.1 Forecasting Performance for One and Multiple Steps	355

17.5.2 Value-at-Risk 357
 17.5.3 A Multiple Time Series Example 359

18 Simulation Based Option Pricing 363

Denis Belomestny and Grigori N. Milstein

18.1 Introduction 363
 18.2 The Consumption Based Processes 365
 18.2.1 The Snell Envelope 365
 18.2.2 The Continuation Value, the Continuation and
 Exercise Regions 366
 18.2.3 Equivalence of American Options to European Ones
 with Consumption Processes 367
 18.2.4 Upper and Lower Bounds Using Consumption
 Processes 367
 18.2.5 Bermudan Options 368
 18.3 The Main Procedure 369
 18.3.1 Local Lower Bounds 369
 18.3.2 The Main Procedure for Constructing Upper Bounds
 for the Initial Position (Global Upper Bounds) 370
 18.3.3 The Main Procedure for Constructing Lower Bounds
 for the Initial Position (Global Lower Bounds) 372
 18.3.4 Kernel Interpolation 373
 18.4 Simulations 374
 18.4.1 Bermudan Max Calls on d Assets 374
 18.4.2 Bermudan Basket-Put 375
 18.5 Conclusions 377

19 High-Frequency Volatility and Liquidity 379

Nikolaus Hautsch and Vahidin Jeleskovic

19.1 Introduction 379
 19.2 The Univariate MEM 380
 19.3 The Vector MEM 383
 19.4 Statistical Inference 385
 19.5 High-Frequency Volatility and Liquidity Dynamics 387

20 Statistical Process Control in Asset Management 399

Vasyl Golosnoy and Wolfgang Schmid

20.1 Introduction 399
 20.2 Review of Statistical Process Control Concepts 400
 20.3 Applications of SPC in Asset Management 403

20.3.1	<i>Monitoring Active Portfolio Managers</i>	404
20.3.2	<i>Surveillance of the Optimal Portfolio Proportions</i>	408
20.4	<i>Summary</i>	414
21	Canonical Dynamics Mechanism of Monetary Policy and Interest Rate	417
	<i>Jenher Jeng, Wei-Fang Niu, Nan-Jye Wang, and Shih-Shan Lin</i>	
21.1	<i>Introduction</i>	417
21.2	<i>Statistical Technology</i>	419
21.3	<i>Principles of the Fed Funds Rate Decision-Making</i>	424
21.3.1	<i>Fairness of Inflation Gauge</i>	424
21.3.2	<i>Neutral Interest Rate Based on Fair Gauge of Inflation</i>	425
21.3.3	<i>Monetary Policy-Making as Tight-Accommodative Cycles Along Neutral Level as Dynamic Principal</i>	427
21.4	<i>Response Curve Structure and FOMC Behavioral Analysis</i> . .	428
21.4.1	<i>Data Analysis and Regressive Results</i>	428
21.4.2	<i>The Structure of the FOMC's Response Curve – Model Characteristics, Interpretations</i>	429
21.4.3	<i>The Dynamics of the FFR – Model Implications</i>	432
21.4.4	<i>General Dynamic Mechanism for Long-Run Dependence of Interest Rate and Inflation</i>	437
21.5	<i>Discussions and Conclusions</i>	439
Index		443
